CHAPTER I

INTRODUCTION

1. INTRODUCTION

In recent years, the need for comprehensive economic statistics has been growing rapidly in most developing countries in view of the use of such statistics in formulating socio-economic development plans in general, and to assess the socio-economic situation at the micro level, in particular. Thus, reliable and timely economic statistics data at the household level such as the ones obtained from Household Income, Consumption and Expenditure Surveys, on a regular basis are the major sources of socio-economic information. These surveys provide valuable data, especially for assessment of the impact of policies on the conditions and levels of living of households.

A report on the 1995/96 Household Income, Consumption and Expenditure Survey was published and distributed to users as **"Statistical Bulletin 170",** Jan. 1997. However, due to inconsistencies and various outliers observed in the data set during later stage of data processing the data were processed all over again. ***Hence, the Authority would like to advice users with apology to ignore the information given in "Statistical Bulletin 170" and to use strictly the revised version of the report in Statistical Bulletin 204.***

This is a report on the 1995/96 Household Income, Consumption and Expenditure Survey, (HICES), conducted on a sample basis throughout the country. In this report, the principal results of the survey and major tabular reports are presented at country, rural, and urban levels. In addition, summary tables of basic characteristics (i.e., distribution of households by domestic expenditure group,

distribution of households by income group, average value of expenditure by major expenditure items, average calories intake per person per day by major food and drink groups and total receipts by source) for regions (rural part) and selected urban centers are presented. The format of this volume is arranged in such a way as to facilitate easy comparability among the levels, i.e., country, rural, and urban levels. To achieve this, tabular reports signifying the same title are designated by the same table number but subscripted by the letters "a", "b" and "c" for country, rural and urban level reports, respectively. For instance, the tabular report "Distribution of Households by Income and Domestic Expenditure Group" is designated by the same table number, i.e., Table 10, thus "10a" is for country, "10b" for rural and "10c" for urban level reports. However, in some cases tables are further subscripted by letters "r" and "u"; i.e. "r" is for rural regional and "u" is for selected urban centers.

Finally, as the major results presented here are descriptive, it is in the belief of the Authority that the result of this survey could serve, among other things, as a valuable tool for taking policy measures at micro level and to undertake further research on economic situation of the country. However, the data presented in this report could be, enriched by further investigation and in depth analysis.

2. OBJECTIVES OF THE SURVEY

It is a well known fact that surveys of Household Income, Consumption and Expenditure usually have the major goal of providing basic data needed for policy making purposes as well as other related issues that might arise at the micro level. The major objectives of the Survey are to :

a. provide data on the levels, distribution and pattern of household income, consumption and expenditure that will be used for analysis of changes in the levels of living standards of households over time in various socio-economic groups and geographical areas.

b. obtain information for the formulation of socio-economic plans and policies.

c. furnish bench mark data for assessing the impact of existing or proposed socio-economic programs on household living conditions.

d. provide data for compiling household accounts in the system of national accounts, especially in the estimation of private consumption expenditure.

e. obtain weights and other useful information for the construction of consumer price indices at various levels.

NOTE:-

1. Symbols used

-	Not available or negligible
PHH	Per household
PP	Per person
HH	Household
M	Male
F	Female
M+F	Both sexes
Agri	Agricultural
SNNPR	Southern Nations, Nationalities and Peoples Region

2. Figures may not add up to totals because of rounding.
3. Figures may differ slightly from table to table due to the nature of software used in processing.

CHAPTER II

SURVEY METHODOLOGY, DATA COLLECTION AND DATA PROCESSING

1. SURVEY METHODOLOGY

1.1 SCOPE AND COVERAGE

The 1995/96 Household Income, Consumption and Expenditure Survey covered the population in the country on a sample basis excepting the non sedentary population in Afar and Somali Regions. Moreover, residents of collective quarters, homeless persons and foreigners were not covered in this survey. The survey population constitutes all the eleven administrative regions each of which is composed of rural and urban parts.

A total of 943 Enumeration Areas (EAs) were selected to be covered in each round of the survey in all regions. Nevertheless, due to various factors beyond the control of the CSA, 51 and 14 EAs were closed in the first and second rounds of the survey, respectively. Thus, the survey succeeded to cover 572 EAs in the rural and 320 EAs in the urban areas in the first round and 606 EAs in the rural and 323 EAs in the urban areas in the second round. In each round the survey was conducted on the basis of 12 rural and 15 urban households selected in each EA and in total the survey covered 23,369 households, (for detail refer to summary Tables A, B, C and D).

In the survey, data were collected on basic population characteristics; consumption of food, drinks and tobacco; expenditure of the household on various consumption and non-consumption items; and household income and receipts. The data collection exercise took into account the two major seasons of the country, i.e., the slack/wet season and the peak/dry (harvest) season. For details on the scope and the content of the survey refer to survey questionnaire in **Appendix III**.

1.2 CONCEPT AND DEFINITIONS

i) *Household*: A household denotes a group of persons who often live in the same housing unit or in connected premises and have common arrangements for cooking and eating food. A household could consist of a single person, but usually it consists of a husband, his wife, children, relatives, etc.

ii) Member of Household: Person constituting a household is called member of the household. The following are considered as members of a household:-

a) All persons who lived with the household for at least six months including those who were not within the household at the time of the survey and were expected to be absent from the household for less than six months.

b) All guests and visitors who stayed with the household for six months and above.

c) House maids, guards, baby-sitters, etc. who lived with the household even for less than six months.

iii) Head of Household: For the purpose of this survey a head of a household is a person who economically supports or manages the household or for reasons of age or respect, is considered as head by the household or declares himself as such or by members of the household is called head of the household. The head of the household could be a male or a female.

iv) *Household Size* : Is the total number of members of a household.

v) Collective Quarter:- A collective quarter is a premise (a housing unit, a building or a compound) in which a number of unrelated persons reside together, and share common facilities. Examples of collective quarters are monasteries, prisons, boarding schools, hostels, home for aged, children's homes, work camps, military

barracks, etc. It is important to note that in the premises of some collective quarters, there may be private households.

vi) *Urban Center* : is in principle defined as a locality with 2000 or more inhabitants. However for practical purposes an urban center includes the following regardless of the number of inhabitants.

a) All administrative capitals (Regional capitals, Zonal capitals and Wereda capitals)

b) Localities with UDAs not included in (a)

c) All localities which are not included either in (a) or (b) above having a population of 1000 or more persons, and whose inhabitants are primarily engaged in non-agricultural activities.

vii) Urban Dweller's Association, UDA, (Kebele): is the lowest administrative unit in an urban center with its own jurisdiction. It is an association of urban dwellers (commonly known as Kebele) formed by the inhabitants, and usually constitutes a part of the urban center.

viii) *Rural Kebele (Farmer Association Area):* is the lowest administrative unit in a settled rural area with its own jurisdiction.

ix) *Enumeration Area (EA)*: is a unit of land delineated for the purpose of enumerating housing units and population without omission and duplication. An EA in rural areas usually consists of 150 - 200 households, and on the other hand an EA in urban centers constitutes 150-200 housing units. An enumeration area should be related to urban and rural kebeles.

a) An EA may be equal to a rural kebele if the number of the households in the kebele is less than or equal to 150 - 200, in rural areas and equal to an urban kebele in urban areas if the number of housing units in the kebele is 150 - 200.

b) An EA may be a part of a rural kebele or an urban kebele and should not cross a kebele boundary.

x) *Domestic Expenditure* : is defined as total expenditure incurred by the household or any of its members and includes expenditure on consumption as well as non-consumption items.

The following items are included in the household consumption expenditure : Food; Beverages; Cigarettes and tobacco; Clothing and footwear; Housing, water, electricity, gas and other fuels; Furnishings, household equipment and operation; Health; Education; Transport and communication; Entertainment, religious and cultural services; Personal care and effects; Miscellaneous goods and services.

xi) *Payments*: In household consumption expenditure surveys payments are defined as all expenditure listed under domestic expenditure plus other expenditures such as remittance paid, bank deposit, interest paid, insurance premia, loans given out, repayment of loans made, pension and other contributions, donations, fines and related legal expenses, income tax, money spent on the purchase of lottery tickets, gambling expenses, "ekub" payment, "edir" contributions, and other payments. In short payment includes all household consumption expenditures and non-consumption expenditures.

xii) Income: Refers to domestic consumption of own crops and own livestock and livestock products, domestic consumption of goods and services purchased for resale or produced or processed in the household enterprise other than agriculture, wages and salaries, allowance, overtime, bonus, pension, commission, discounts (i.e. concessions obtained), imputed rent of free housing

(i.e. subsidized amount only), imputed rent of owner occupied housing, other employee's benefit, interest received, profit and dividend received, remittance (regularly receive), value of items obtained free (i.e. firewood, water, etc.), rent of personal possessions, alimony (regularly received) and other types of income.

xiii) Receipts:- Refers to income plus 'Ekub' and 'Edir', gifts, loans, repayments of loans, insurance (maturity payments received on life insurance and lump-sum compensation for injury), legal damages (excluding alimony), lottery prizes, inheritance received, withdrawal from saving and sale of household durable goods and personal effects.

xiv) Enterprise:- Is an undertaking where goods and services are produced for sale. An agricultural enterprise producing for household consumption only is covered by this definition. Those engaged in buying and selling activities are included.

1.3 SAMPLE DESIGN

The 1995/96 Household Income, Consumption and Expenditure Survey covered both urban and rural parts of the country, except six zones in Somalie region and two zones in Afar region. For the purpose of the survey, the country was divided into four categories. Urban areas were divided into two broad categories taking into account sizes of their population. Rural areas were also grouped into two categories.

Category I: Rural parts of eight regions were grouped in this category each of which were the survey domains (reporting levels). These regions are Tigray, Afar, Somalie, Benishangul-Gumuz, Gambela, Harari, Addis Ababa and Dire Dawa.

Category II: In this category thirteen survey domains were defined by grouping contiguous rural parts of zones/special weredas in Amhara, Oromiya and SNNP regions, respectively. These were:

a) Amhara

I) North Gondar and South Gondar

ii) East Gojam, West Gojam and Agew Awi

iii) North Wollo and Wag Himra

iv) South Wollo, Oromiya and North Shoa

b) Oromiya

I) East Wellega and West Wellega

ii) Illubabor and Jima

iii) North Shoa and West Shoa

iv) East Shoa, Arsi, Bale and Borena

v) East Hararge and West Hararge

c) SNNP

I) Kefficho-Shekicho, Bench-Maji and Yem

ii) North Omo, South Omo, Derashe and Konso

iii) Gurage, Hadiya and Kembata-Alaba-Timbaro

iv) Sidama, Gedeo, Amaro and Burji

Other than the thirteen domains (reporting levels) defined in Category II, three additional domains could be constructed by combining basic domains from the two rural categories. These domains are:

I) Rural Amhara

ii) Rural Oromiya

iii) Rural SNNP

Category III: Ten large urban centers of the country were grouped in this category. Each of the ten urban centers in this category were the survey domains (reporting level) for which separate survey results **for major survey characteristics** were reported.

Category IV: Urban centers in the country other than the ten urban centers in category III were grouped in this category and formed a single reporting level.

Other than the eleven domains (reporting levels) defined in category III and Category IV, one additional domain, namely total urban (country level) can be constructed by combining the basic domains defined in the two categories.

All in all twenty four basic rural domains (reporting levels) including total rural (country level) were defined for the survey.

In addition to the above urban and rural domains, survey results are to be reported at regional and country levels by aggregating the survey results for the corresponding urban and rural areas.

Definition of the survey domains was based on both technical and resource considerations. More specifically, sample sizes for the domains were determined to enable provision of major indicators with reasonable precision subject to the resources that were available for the survey.

The selection scheme and sample size issues are discussed as follows.

a) **Category I and Category II:** A stratified two-stage sample design was used to select the sample in which the Primary Sampling Units (PSUs) were EAs. Sample enumeration areas (EAs) from each domain were selected using systematic probability proportional to size; size being number of households obtained from the 1994 population and housing census. A total of 620 EAs were selected from the rural part. Within each sample EA a fresh list of households was prepared at the beginning of the survey's field work and for the administration of the survey questionnaire 12 households per sample EA were systematically selected.

b) **Category III:** Stratified two-stage sample design was used to select the sample in which the PSUs were EAs. Sample EAs from each domain were selected using systematic probability proportional to size; size being number of households obtained from the 1994 population and housing census. In this category, a total of 220 EAs were selected. Within each sample EA, fresh list of households was prepared at the beginning of the survey's field work and for the administration of the survey questionnaire 15 households per sample EA were systematically selected.

c) **Category IV:** Three-stage stratified sample design was adopted to select the sample from domains in category IV. The PSUs were urban centers selected using Systematic Probability Proportional to Size; size being number of households obtained from the 1994 population and housing census. The secondary sampling units (SSUs) were EAs which were selected using Systematic Probability Proportional to Size; size being number of households obtained from the 1994 population and housing census. Number of sample SSUs selected from each of the sample urban centers was determined by proportional allocation to their household population from the census. Ultimately, 15 households within each of the sample EAs were selected systematically from a fresh list of households prepared at the beginning of the survey's field work for the administration of the survey questionnaire.

Distribution of sample units by domain (reporting levels) is given in Summary Tables A, B (First Round) and Summary Tables C and D (Second Round).

Estimation procedure of totals, ratios, sampling error and the measurement of precision of expenditure and payment of households are given in **Appendix I and II.**

2. DATA COLLECTION

2.1 PILOT SURVEY

The survey, which has been conducted in rural and urban areas simultaneously, was one of the huge undertakings launched by the Central Statistical Authority (CSA). Thus, it was felt from its very inception that a pilot study should be conducted in order to test the survey instruments, the reaction of respondents and the different technical, administrative and logistics requirements of the main survey.

To this end, a pilot study has been conducted in Addis Ababa and in some rural enumeration areas of Oromiya for a period of one month (15 March 1995 to 14 April 1995). A total of fifteen enumeration areas, ten in Addis Ababa and five in the mentioned rural areas were covered by the pilot study. Some 100 rural and urban households were interviewed in this test. In general, this exercise enabled the Authority to make some important improvements to the final survey document and to assess and allocate the necessary technical as well as administrative and logistics support needed for the survey.

2.2 TRAINING

The next step after the pilot study was the training of the field staff for the main survey, which was carried out in two phases. During the first phase, training on the survey instruments, i.e., survey questionnaires, instruction manual, etc., was given for about 70 professional and sub-professional staff at the Head Office. The first phase of the training lasted for ten days. These staff served as trainers of enumerators and supervisors. The second phase of the training was conducted in 14 Branch Statistical Offices. It involved the training of about 1000 enumerators and 200 field supervisors and this training lasted for about 20 days.

2.3 FIELD WORK

The field work of the first round Household Income, Consumption and Expenditure Survey started on the 11th of June 1995 and covered 572 rural and 320 urban enumeration areas. The first round data collection was completed during the first week of August, 1995.

The field work of the second round of this survey was carried out in December 1995 and January 1996 and covered more or less those same enumeration sites and households both in rural and urban areas.

In most of the sample units data were collected from 12 households in each rural sample EA and 15 households from each urban sample EA. The interview method and objective measurement of household consumption items were utilized throughout the survey period.

In rural areas data were collected in such a way that the 12 households selected from each enumeration area were grouped into two, each group consisting of six households The first six households are interviewed over a period of four weeks and the remaining six households again over a period of the next four weeks. The enumerator visited two households daily so that each household is interviewed twice a week and eight times during the one month period in each round.

In the case of urban centers, the 15 households were also grouped into two. That is, seven households were interviewed during the first four weeks while the remaining eight households were interviewed during the following four weeks. The workload distribution of the enumerators in the urban centers was to interview a maximum of three households per day. As in the rural case, here too, each sample household was interviewed twice weekly, i.e., eight times monthly in each round. It is believed that the relatively frequent visits made by the enumerator to each household was essential to control the errors arising from memory lapse which is common in household surveys of this nature.

As shown in summary table E different reference periods were used to collect information on consumption expenditures of food, drinks and tobacco, and other consumption and non-consumption items such as durable and non-durable household items.

Summary Table E

Reference Periods Used for Data collection

Consumption/Expenditure group	Reference Periods
Food, drinks and tobacco	Twice weekly (3-4 days)
Clothing and footwear	One month and six months
Fuel, power, house rent and repairs	One week and six months
Household equipment and operation	One month and six months
Medical care, and education	One week and six months
Transport and communication	One week and six months
Recreation entertainment and services	One week and six months
Personal care and personal effects	One week and six months
All other items including non-consumption expenditure	One week and six months

2.4 FIELD SUPERVISION

In surveys of this kind, regular supervision is a compulsory component of the whole process. Thus, the field supervision activity of the 1995/96 HICES was launched right after the first round data collection was started. The supervision was designed in such a way as to closely monitor the data collection activities, facilitate the enumeration process and ensure that the data collection takes place according to

the instruction. In addition to this, regular supervision activities throughout the two-round survey periods, coordinators in most cases professionals, equipped with a thorough understanding of the subject matter, have closely observed the quality of data collection on the spot even during the interview period. Furthermore, a team of experts from the Head Office have visited all Branch Statistical Offices and some urban and rural enumeration areas to get a first hand impression of the whole activity of the field work. Thus, despite the limited number of field vehicles involved in the data collection and supervision activities, it is important to state that, the field operation of the 1995/96 HICES was success fully completed.

3. DATA PROCESSING

Due to the complex nature and magnitude of the survey, CSA has given special attention to the data processing activity. Thus, a task force comprising of subject matter specialists and data processing experts was formed to oversee the data processing and analysis activities of the HICES starting from August 1995. After the completion of the first round data collection and the filled-in questionnaires were returned from the field, the task force embarked on the first stage of data processing activity, i.e., manual editing, coding and verification. With the utilization of experienced editor-coders and verifiers, the editing, coding and verification of the questionnaires have taken the most part of the three months after which data entry was started.

For the data entry activity, the Integrated Microcomputer Processing System (IMPS) software was used throughout. To speed up this process, experienced data entry operators (those who served in the 1994 Population and Housing Census data entry operation) were used and the data entry activity was completed in December 1995. The survey data collected during the second round (December 1995/ January 1996) have also passed through all the data processing activities stated above for the first round.

After the data entry of both rounds has been completed, the next step in the data processing activity was to merge these data. It should be stated here that the merging of the data sets of the two rounds data was a difficult and challenging task. However, with the help of a short term consultancy services provided by Statistics Norway, the merging was successfully completed in May 1996, after which data cleaning, detailed and thorough consistency checking were done. In fact, the data cleaning and the consistency checking, which were important for the generation of the final tabular reports, were done both manually and by computer.

However, after the generation of the final tabular reports and publishing of "Statistical Bulletin 170" inconsistencies and various outliers were observed in the data set in the process of using the same data set to provide baseline poverty indicators in conjunction with that of the Welfare Monitoring Survey data. To resolve these inconsistencies and outliers the CSA has established a taskforce comprising of its senior data processing and senior subject matter experts to investigate the problems in the original data set. The taskforce found out that the various outliers that appeared in the data set were the result of file mishandling, which was discovered at the final stage of the validity checks. Accordingly, the taskforce has worked on this problem and performed a series of validity checks on the earlier data set and has resolved the problem.

The whole data set was thoroughly cleaned and the consistency checking were completed slightly behind schedule due to unforeseen problems encountered during the production of the tabular reports. At this point it should be clear that all tabular reports presented here are based on the merged and weighted data of both rounds and are also annual figures.

CHAPTER III

SUMMARY OF MAJOR FINDINGS

As mentioned in the previous chapter, the survey covered the settled population of the country. Hence, the estimates of the total population does not include six zones out of nine in Somali Region and two zones out of five in Afar Region. Furthermore, the survey coverage is limited to nine weredas out of 13 from the three covered zones of the Somali Region and eight weredas out of 15 from the three covered zones in the Afar Region. Therefore, all estimates from the survey are pertinent to areas covered by the survey.

1. POPULATION ESTIMATES AND BASIC CHARACTERISTICS

a. Population Estimates:

According to the survey result, the total population of the country during the survey period stood at about 52.7 million (26.3 million male and 26.4 million female) of which the rural and urban population estimates are about 45.1 million (22.8 million male and 22.3 million female) and about 7.6 million (3.4 million male and 4.2 million female) respectively (See Tables 1a, 1b and 1c). Note that these estimates particularly refer to the second round data collection period, i.e., December 1995 and January 1996.

b. Age and Sex Composition:

Tables 1a, 1b and 1c also show the age and sex composition of the survey population for country, rural, and urban levels. At the country level, 46.44 percent and 50.2 percent of the population fall under age 15 and 15 to 64 years, respectively, while 3.4 percent are aged 65 years and over. Dependency ratio is defined as a quotient between the sum of the population aged 0 to 14 years and 65 yeas and

above (population assume to be not productive) to the population of working age group (15 to 64 years). This ratio is usually expressed in percentage. The dependency ratio for the country is computed to be 99, implying that in Ethiopia every 100 persons in the productive age has to support themselves as well as additional 99 persons for their livelihood.

Summary Table F

Percentage Distribution of the Population by Age and Sex at Country, Rural and Urban Levels (1995/96 HICES)

Age Group (years)	PERCENTAGE DISTRIBUTION OF POPUALTION BY SEX								
	COUNTRY LEVEL			RURAL			URBAN		
	Male	Female	Both Sexes	Male	Female	Both Sexes	Male	Female	Both Sexes
00-09	32.6	31.8	32.2	33.2	33.5	33.4	28.6	22.6	25.3
10-14	14.8	13.6	14.2	14.7	13.5	14.1	15.6	14.2	14.8
15-19	11.2	10.7	11.0	10.9	9.9	10.4	13.2	14.8	14.1
20-24	7.7	7.9	7.8	7.5	7.4	7.5	8.8	10.1	9.5
25-29	6.6	7.4	7.0	6.6	7.3	7.0	6.6	8.1	7.5
30-34	4.6	5.6	5.1	4.5	5.6	5.0	5.3	5.9	5.7
35-39	4.6	6.1	5.3	4.5	6.0	5.2	5.2	6.4	5.9
40-44	3.8	4.1	4.0	3.8	4.1	3.9	4.3	4.4	4.3
45-49	3.7	3.2	3.4	3.7	3.3	3.5	3.6	2.9	3.2
50-54	2.4	2.7	2.6	2.4	2.7	2.5	2.2	2.9	2.6
55-59	2.2	1.9	2.0	2.3	1.9	2.0	1.7	1.7	1.7
60-64	2.1	2.0	2.0	2.1	2.0	2.1	1.6	2.2	1.9
65 & +	3.7	3.0	3.4	3.8	2.8	3.3	3.3	3.8	3.5
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

Source:- Table 1a, 1b and 1c.

Of the total rural population, 47.5 percent fall below 15 years of age while 49.2 percent accounted for the productive age, i.e., lie between 15 and 64 years of age, and 3.3 percent are aged 65 years and above (See also Summary Table F). This shows that the dependency ratio is about 103. This implies that every 100 person in the productive age has to support 103 dependents in rural Ethiopia.

In urban Ethiopia, 40.1 percent and 56.4 percent, of the population fall under 15 years of age and between 15 and 64 years of age, respectively, while 3.5 percent are aged 65 years and over. The dependency ratio stands at 77, that is, every 100 person in the productive age in urban areas has to support 77 dependents. This shows that the difference in the profile of the dependency ratio of the urban and rural population in the country.

c. *Household Size*:

Tables 1a, 1b and 1c show the distribution of households and members by age, sex and household size at country, rural and urban levels. According to the survey result, the average household size for the rural population is 5.1 persons, while that of urban population is 4.7 persons. Meanwhile, according to the 1994 population and Housing Census results, the average household size for the rural population was 4.8 persons and that of the urban population was 4.6 persons.

At the country level, the survey result shows that the average household size for Ethiopia is 5.0 persons with the most common households being five-member households followed by four, three and six-member households, all of these accounting for 62.2 percent of the entire households in the country. The one and ten-person and above households accounted for 3.6 percent and 3.5 percent, in that order, of the total households in the country (See Table 1a).

In rural Ethiopia, the data on the distribution of the household sizes indicates that the most common household size is found to be a five-member household and is followed by four, three and six-member households, in that order, accounting for 63.5

percent of the total rural households. The two extremes, i.e., one and ten-person and above households, in rural Ethiopia, stood at 2.8 percent and 3.4 percent, in that order (See Table 1b).

In urban Ethiopia, the most common household sizes are three, four, two and five-member households, accounting for 58.4 percent of all urban households, while one and ten-person and above households accounted for 7.9 percent and 4.5 percent, respectively, of the total urban households (See Table 1c).

2. THE LEVEL AND PATTERN OF INCOME, CONSUMPTION AND EXPENDITURE OF THE HOUSEHOLDS

In surveys of this kind, the income statistics reported by households usually tends to underestimate the actual income level of households due to various reasons. As a result, a number of countries usually take household expenditure as a proxy of income. Despite this fact, income statistics are presented in the analysis of the survey result in various tables.

Tables 2a, 2b and 2c depict the distribution of households by domestic expenditure groups at country, rural and urban levels. At the country level, households spending below 2,000 Birr annually (or less than 170 Birr monthly) are 9.7 percent of the total households while the top 3.4 percent spend 12,600 Birr or more per household annually, i.e., more than 1,000 Birr per household monthly. The remaining 86. 9 percent spend between 2,000 and 12,599 Birr per annum. However, the bulk of the population, about 62.8 percent of the households, spend less than 5,400 Birr per year (about 450 Birr per month) per household (Summary Table G).

In rural Ethiopia, households spending below 2,000 Birr per annum (or less than about 170 Birr monthly) are 10.0 percent of all rural households, while the top 1.7 percent spend 12,600 Birr or more annually (or more than 1,000 Birr monthly). The remaining, 88.4 percent spend between 2,000 and 12,599 Birr per annum. It can

also be seen from these tables that 65.6 percent of the rural households spend less than 5,400 Birr per year (about 450 Birr per month) per household.

Summary Table G

Percentage Distribution of Households by Domestic Expenditure and Income Categories at Country, Rural and Urban Levels

REPORTING LEVEL	DOMESTIC EXPENDITURE IN BIRR PER HOUSEHOLD PER ANNUM			INCOME IN BIRR PER HOUSEHOLD PER ANNUM		
	Less than 2,000	2,000-12,599	12,600 or more	Less than 2,000	2,000-12,599	12,600 or more
Country	9.72	86.89	3.39	16.88	78.42	4.69
Rural	9.95	88.41	1.66	15.13	81.59	3.27
Urban	8.48	78.54	12.97	26.53	60.98	12.50

Source:- Table 2a, 2b and 2c; Table 6a, 6b and 6c

In almost all regions the proportion of households that are spending between Birr 2,000-12,599 per annum are more than 80 percent. Moreover, one could observe the difference and similarities of distribution of households according to their spending capacities at regional (rural part) levels (see Summary Table H). This table shows that no households falling in the category of below Birr 2,000 in Somali, Harari and Dire Dawa Regions. Also Gambela Region exhibit low proportion of households spending below Birr 2,000 as compared to other regions (for details see Tables 1r and 2r)

The observed spending pattern in these regions could be attributed to either due to the fact that the allocation of small sample size (see Summary Tables A, B, C and D) or to the fact that these regions are as being border regions which are subject to cross country trade and in turn earn better income than other regions. Hence it is advisable to inform the user to be cautious while using the results of these regions.

Summary Table H

Percentage Distribution of Households by Region, Domestic Expenditure and Income Categories - Rural

REGION (Rural)	DOMESTIC EXPENDITURE IN BIRR PER HOUSEHOLD PER ANNUM			INCOME IN BIRR PER HOUSEHOLD PER ANNUM		
	Less than 2,000	2,000-12,599	12,600 or more	Less than 2,000	2,000-12,599	12,600 or more
Tigray	7.45	92.10	0.46	9.78	86.66	3.56
Afar	5.75	93.29	0.97	20.62	76.43	2.95
Amhara	15.81	83.70	0.48	22.04	76.96	1.00
Oromia	4.77	92.52	2.70	9.76	85.11	5.13
Somali	-	91.47	8.53	1.18	90.93	7.88
Benshangul Gumua	9.00	90.55	0.45	13.12	84.12	2.76
SNNP	12.29	86.39	1.31	17.42	79.75	2.84
Gambela	1.23	94.73	4.03	7.19	90.97	1.85
Harari	-	72.89	27.11	1.55	80.35	18.10
Addis Ababa	5.00	81.79	13.23	4.95	76.47	18.58
Dire Dawa	-	93.77	6.22	2.96	93.24	3.80
Total	9.95	88.41	1.66	15.13	81.59	3.27

Source:- Table 1r and Table 2r

In urban Ethiopia, households spending below 2,000 Birr annually (or less than 170 Birr per household monthly) account to about 8.5 percent of all urban households while the top 13.0 percent spend 12,600 Birr or more per household annually (more than 1,000 Birr monthly). The remaining 78.5 percent spend between 2,000 and 12,599 Birr. Out of the total urban households, about 47.1 percent spend less than 5,400 Birr per year per household (about 450 Birr per household monthly).

One can also observe the difference in spending patterns of urban households by urban centers from the Summary Table I and for details refer to Tables 1u and 2u.

Comparing the distribution of expenditure in Tables 2a, 2b, 2c, 1r and 1u and the distribution of income, in Tables 6a, 6b, 6c, 2r and 2u the following results are readily apparent. In Table 6a one can see that 16.9 percent of all households in the country earn less than 2,000 Birr per household per annum and the top 4.7 percent of the households earn 12,600 Birr or more per household annually. The remaining 78.4 percent earn between 2,000 and 12,599 Birr. The Table also shows that the majority of the households (68.3 percent) earn less than 5,400 Birr annually. It is evident that both patterns showed more or less equitable distributions.

Thus, in spite of expected underestimation of income by households, one can conclude that for all practical purposes the two distributions, i.e., expenditure and income, showed similar patterns. The distributions of household payment and receipt also support this result. For details, see Tables 4a, 4b and 4c and Tables 8a, 8b and 8c.

The spending and receipt patterns of households can also be compared at rural and urban levels as shown in Summary Tables G and J. In rural Ethiopia, the result shows that 15.1 percent of all rural households earn less than 2,000 Birr annually while only the top 3.3 percent of rural households earn 12,600 Birr or more annually (more than 1,000 Birr per household monthly). The rest, i.e., 81.6 percent earn between 2,000 and 12,599 Birr per annum. The majority of the rural households (69.4 percent) earn on the average below 5,400 Birr annually. For details, the reader is referred to Table 6b (Rural).

Summary Table I

Percentage Distribution of Households by Domestic Expenditure and Income Categories for Selected Urban Centers

REGION (Rural)	DOMESTIC EXPENDITURE IN BIRR PER HOUSEHOLD PER ANNUM			INCOME IN BIRR PER HOUSEHOLD PER ANNUM		
	Less than 2,000	2,000-12,599	12,600 or more	Less than 2,000	2,000-12,599	12,600 or more
Mekele	3.62	87.13	9.26	21.47	69.77	8.77
Bahir Dar	6.93	84.02	9.05	23.44	62.94	13.60
Gonder	10.64	79.03	10.33	30.82	56.21	12.96
Desie	10.23	84.09	5.67	42.07	52.85	5.08
Jima	4.80	84.74	10.46	22.57	64.19	13.26
Debre Zeit	6.20	82.02	11.77	26.61	63.82	9.59
Nazareth	8.40	84.98	6.64	24.94	65.89	9.18
Harar	1.31	82.90	15.79	12.29	66.36	21.34
Addis Ababa	2.10	67.33	30.59	15.60	67.25	17.16
Dire Dawa	1.19	86.48	12.33	15.13	66.60	17.88
Other Urban	10.92	80.92	8.18	30.28	58.67	11.05
Total	8.48	78.54	12.97	26.53	60.98	12.50

Source:- Tables 1u and 2u

It can also be seen from Table 6.1b that in rural Ethiopia the distribution of the female population is higher than that of male in lower income groups, that is, up to an annual income of 3399 Birr while in middle and higher income groups the reverse is true. If one compares these figures with that obtained from the expenditure side, (Table 2.1b) it can be seen that the distribution of the female population is higher than that of male in lower expenditure groups, that is, up to an annual expenditure of 4199 Birr while the reverse is true for higher expenditure groups except for the top

two groups. Furthermore, these results can be confirmed from the household payment and receipt distribution (Tables 4.1b and 8.1b).

Summary Table I shows that in urban Ethiopia, 26.5 percent of households earn less than 2,000 Birr annually while the top 12.50 percent of urban households earn 12,600 Birr or more annually (more than 1,000 Birr per household monthly). The remaining 61 percent earn between 2,000 and 12,599 Birr per year. On the other hand, the majority of urban households, 62.1 percent, earn on the average an annual income of less than 5,400 Birr (a monthly income of less than 450 Birr) per household (Summary Table G).

It is clear from Summary Table J that payments and receipts are more or less similarly distributed among payment/receipt groups. One can also observe that the skewness is relatively sharper in the receipt case. (For details see Table 4a, 4b, 4c, 8a, 8b and 8c).

Summary Table J

Percentage Distribution of Households by Payment and Receipt Categories at Country, Rural and Urban Level

REPORTING LEVEL	PAYMENT IN BIRR PER HOUSEHOLD PER ANNUM[1]			RECEIPT IN BIRR PER HOUSEHOLD PER ANNUM[2]		
	Less than 2,000	2,000-12,599	12,600 or more	Less than 2,000	2,000-12,599	12,600 or More
Country	8.61	86.73	4.65	14.49	79.70	5.84
Rural	8.80	88.69	2.53	13.28	82.57	4.15
Urban	7.60	76.01	16.41	21.13	63.78	15.08

Source:- 1. Tables 4a, 4b, 4c

2. Tables 8a, 8b and 8c

The above findings should also be supported by the cross classifications of income, receipt, expenditure and payment. These information are obtained from the distribution of households by income and domestic expenditure group (Tables 10a, 10b and 10c), distribution of households by receipt and payment group (Tables 11a, 11b and 11c), distribution of income of households by income and expenditure group (Tables 15a, 15b and 15c), distribution of receipt of the household by receipt and payment group (Tables 16a, 16b and 16c) and average expenditure (all payments) by income group (Table 12a, 12b, and 12c). Thus, for subsequent discussions the reader is referred to the above mentioned Tables. At this stage, however, it is important to describe the concept behind each of these tables before moving to the analysis part.

Tables 10a, 10b and 10c (for country, rural, and urban levels) show households who spent what they earned (the non-savings group) as well as households who spent more than their earnings (the dis-savings group) and households who spent less than their earnings (the savings group). Tables 11a, 11b and 11c reveal similar information, but from the receipt and payment side (i.e., households who paid the same, those who paid less or those who paid more than their receipts).

Tables 15a, 15b and 15c show the share of income earned out of the total income for the households described in Tables 10a, 10b and 10c (i.e., households who spent equal to, those who spent less or those who spent more than their earnings). From Tables 16a, 16b and 16c the share of receipt of these households out of the total receipt can be observed for the household types mentioned in Tables 11a, 11b and 11c.

At the *country level* (Table 10a), households who spent what they earned are 33.7 percent of the total households. While those who spent less and more than their earnings amounted to 20.1 percent and 46.1 percent , respectively. The corresponding percentages from the receipt and payment cross-classification (Table 11a) are found out to be 33.3 percent, 19.6 percent, 47.1 percent, respectively, for

the three types of households mentioned above. The data shows that the share of income for these households at the country level is 37.5 percent, 31.8 percent and 30.8 percent, of the total household income (see Table 15a). On the other hand, from the receipt and payment side the share stood at 38.6 percent, 29.7 percent and 31.6 percent (See Table 16a).

At the *rural level*, the data in Table 10b revealed that 36.6 percent of the households spent what they earned, while 21.0 percent spent less than their earning. On the other hand, the data also showed that 42.4 percent of the households spent more than their earnings. The percentages from the receipts and payment sides are 36.0 percent, 20.4 percent and 43.6 percent for the non-saving, saving and dis-saving groups of households, in that order (see Table 11b). For these types of households, the share of income out of the total income of all households is 35.6 percent, 32.8 percent and 31.6 percent (see Table 15b), while their share of receipt out of the total households receipt stood at 35.2 percent, 31.8 percent and 33.0 percent, respectively (see Table 16b).

At the *urban level* those households who spent all their earnings are 18.0 percent of the total urban households, while households who spent less than their earning and those who spent more than their earnings stood at 15.7 percent and 66.4 percent, in that order (see Table 10c). From the receipt and payment sides these percentages are 18.2 percent, 15.4 percent and 66.5 percent for the households under consideration (see Table 11c), while their share of income out of the total household income is 43.3 percent, 28.6 percent and 28.0 percent, respectively (see Table 15c), for the group of households who spent the same, those who spent less or those who spent more than their earnings. On the other hand, Table 16c, reveal that the share of receipt out of the total receipts of urban households is 48.5 percent, 23.7 percent and 27.8 percent for the households who paid the same, those who paid less or those who paid more than their receipts.

It can be seen from the above discussion that the proportion of the dis-saving group of households when examined from the income side seem to be consistently

greater than the proportion of the saving and non-saving groups. This can be explained in two ways. The first possible explanation is that households who spent more than their earnings might have drawn the "extra" income from their past savings (which could never be reported in this survey). The other logical explanation for the high proportion of the dis-savings group is that these households might have drawn the difference from borrowing on the expectation that their future income will increase to cover the excess expenditure from various sources.

Finally, one should not forget that in surveys of this kind income is usually under reported. If the reader is inclined to be convinced by the latter argument, it can be clearly seen from the above percentages that urban households seem to hide their income when compared to rural households. In any case, the result indicates that at this stage the distributions are, more or less, equitable with a slight hint of under-estimation observed from the income side.

3. THE STATUS OF PER CAPITA EXPENDITURE AND ALL PAYMENTS

Tables 12a, 12b and 12c show the average expenditure (all payments) by expenditure group. The data in these tables shows that the average household expenditure and per capita expenditure by expenditure type at country, rural and urban levels.

Table 12a shows that the annual average of all payments per person at country level is Birr 1,319.1. One could derive the annual average domestic expenditure from the data in this table by subtracting the values of Household Non-Consumption Expenditure. Thus, the annual average domestic expenditure per person is found to be Birr 1,222.6. Furthermore, one could also obtain from the same table the per capita domestic expenditure excluding the imputed values of some items freely obtained/owned during the survey period such as the rental values of own house, water, freely collected firewood,...etc. (Table 12.1a). Hence, the per capita domestic expenditure excluding imputations is Birr 1,076.6 (See Summary Table K).

Summary Table K

Annual Per Capita Domestic Expenditure and all Payments in Birr at Country, Rural and Urban Level

Reporting Level	CATEGORIES			
	Domestic Expenditure		All Payments	
	Including Imputed Values	Excluding Imputed Values	Including Imputed Values	Excluding Imputed Values
Country	1222.56	1076.61	1319.08	1173.13
Rural	1136.59	967.37	1210.30	1041.08
Urban	1696.52	1611.46	1918.83	1833.77

Source: Tables 12a, 12b and 12c

Table 12b shows that the annual average of all payments per person for the rural area is Birr 1,210.3, while by subtracting the values of Household Non-Consumption Expenditure, the annual average domestic expenditure per person is Birr 1,136.6. Moreover one could also obtain from the same table the per capita domestic expenditure excluding the imputed values of freely obtained/owned items during the survey period such as imputed rent of own house, freely collected firewood, water, etc. (Table 12.1b). Thus, the per capita domestic expenditure excluding the imputed values is Birr 967.4.

On the other hand, Table 3r shows the annual average of all payments per person by regions (Rural part). Therefore, the annual average of all payments per person ranges from Birr 1,031.6 in Amhara to Birr 2,472.3 in Harari. It is also possible to get the Domestic Expenditure per capita for these regions by subtracting the share of Household Non-consumption Expenditure from respective values of all payments per person as shown in Summary Table L.

Table 12c shows that the annual average of all payments per person for the urban areas, which is Birr 1,918.8. On the other hand, one could derive the annual average domestic expenditure from this table by subtracting the values of Household

Non-Consumption Expenditure. Hence, the annual average domestic expenditure per person is Birr 1,696.5. Furthermore, one could also obtain from Table 12.1c the per capita domestic expenditure excluding the imputed values of freely obtained or owned items during the survey period. Hence, the per capita domestic expenditure excluding the imputed values is Birr 1,611.5.

Summary Table L

Annual Per Capita Domestic Expenditure and all Payments in Birr at Regional Levels - Rural (Including Imputed Values)

Region (Rural)	CATEGORIES	
	Domestic Expenditure (Birr)	All Payments (Birr)
Tigray	1,209.60	1,280.83
Afar	1,520.46	1,587.65
Amhara	974.42	1,031.59
Oromia	1,282.91	1,360.92
Somali	1,975.42	2,008.31
Benshangul Gumuz	1,074.99	1,127.22
SNNP	1,021.34	1,115.01
Gambela	1,706.66	1,774.10
Harari	2,388.73	2,472.25
Addis Ababa	1,685.89	1,774.33
Dire Dawa	1,682.83	1,696.84
Total	1,136.59	1,210.30

Source:- Table 3r

Table 3u shows the annual average of all payments per person for selected urban centers. Hence, the summary of annual average of all payments per person, and domestic expenditure per capita is given in summary Table M.

Summary Table M

Annual Per Capita Domestic Expenditure and all Payments in Birr for Selected Urban Centers (Including Imputed Values)

Selected Urban Centers	CATEGORIES	
	Domestic Expenditure (Birr)	All Payments (Birr)
Mekele	1,894.25	2,020.97
Bahir Dar	1,570.82	1,781.40
Gonder	1,471.42	1,614.50
Desie	1,113.18	1,177.69
Jima	1,515.26	1,711.71
Debre Zeit	1,540.55	1,754.18
Nazareth	1,370.34	1,573.58
Harar	2,192.57	2,489.39
Addis Ababa	2,207.96	2,399.57
Dire Dawa	1,798.26	1,985.16

Total	1,696.53	1,918.84

Source:- Table 3u

4. THE STATUS OF PER CAPITA RECEIPT AND INCOME

Table 14a shows the annual average of total receipts per person at the country level is found to be Birr 1,253.3. On the other hand, one could derive the annual average per capita income from this table by subtracting the value of receipts from deposit (such as "Equb", "Edir", Loans given out, loans repaid, bank deposit, pension contribution and interest), other receipts and values of not reported items in Table 14a. The per capita income at the country level is Birr 1,185.3 (Summary Table N).

Summary Table N

Annual Per Capita Income and Total Receipts in Birr at Country, Rural and Urban Levels

Reporting Level	CATEGORIES			
	Income		Total receipts	
	Including Imputed Values	Excluding Imputed Values	Including Imputed Values	Excluding Imputed Values
Country	1185.27	1039.32	1253.32	1107.37
Rural	1130.64	961.42	1176.68	1007.46
Urban	1891.73	1806.67	2099.68	2014.62

Source: Table 14a, 14b and 14c

Furthermore, one could also obtain the per capita income excluding the imputed values (Table 12.1a). Hence, the per capita income excluding the imputed values would be Birr 1,039.3 at the country level.

Table 14b shows the annual average of total receipts per person at the rural level is found to be Birr 1,176.7, while by subtracting the value of receipts from deposit, (such as "Equb", "Edir", loans given out, loans repaid, bank deposit, pension contribution and interest), other receipts and value of not reported items in Table 14b per capita income at the rural level is Birr 1,130.6. Moreover, one could also obtain the per capita income excluding imputed values which account for Birr 961.4 (refer to Table 12.1b).

On the other hand, Table 4r and summary Table O gives the annual average of total receipts per person for regions (Rural part). According to the report, the annual average of total receipts per person for regions (rural part) fall between Birr 1,006.6 for Amhara and Birr 3,215.8 for Addis Ababa. Unlike other regions, the difference between income and receipts for Addis Ababa (rural part) is very huge, due to the fact that over 50 percent of the sources of receipt reported by households did not satisfy the definition of income.

Table 14c shows the annual average of total receipts per person at the urban level which would be Birr 2,099.7. On the other hand, one could drive the annual per capita income which amounts to Birr 1,891.7 by subtracting the values of receipts from deposit (such as "Equb", "Edir", loans given out, loans repaid, bank deposit, pension contribution and interest), other receipts and values of not reported items in Table 14c. Furthermore, it is also possible to obtain the per capita income excluding imputed values (Table 12.1c) which is Birr 1,806.7 (Summary Table N).

Summary Table O

Annual Per Capita Income and Total Receipts in Birr and region (Rural Part)

Region	CATEGORIES	
	Income (including imputed values)	Total receipts (including imputed values)
Tigray	1,255.17	1,318.69
Afar	1,385.18	1,412.62
Amhara	980.53	1,006.58
Oromia	1,237.69	1,283.14
Somali	1,747.93	1,800.81
Benshangul Gumuz	1,039.66	1,064.45
SNNP	1,067.76	1,134.54
Gambela	1,682.47	1,690.06
Harari	2,328.50	2,380.01
Addis Ababa	1,781.75	3,215.84
Dire Dawa	1,365.16	1,369.70
Total	1,130.64	1,176.68

Source:- Table 4r

Table 4u shows that the annual average of total receipts per person, for selected urban centers, fall between Birr 897.3 in Dessie and Birr 2,526.7 in Harar. From the pattern of average annual receipts per person of the urban centers, it is observed that the data on income and total receipts for Desie town is low and readers are advised to be cautious in using this indicator (Summary Table P).

Summary Table P

Annual Per Capita Income and Total Receipts in Birr for Selected Urban Centers

Selected Urban Centers	CATEGORIES	
	Income (including imputed values)	Total receipts (including imputed values)
Mekele	1,388.97	1,622.02
Bahir Dar	1,621.02	1,795.16
Gonder	1,937.77	1,983.27
Desie	862.42	897.28
Jima	1,476.59	1,542.77
Debre Zeit	1,652.16	1,929.13
Nazareth	1,642.07	1,692.31
Harar	2,463.33	2,526.70
Addis Ababa	2,217.43	2,402.20
Dire Dawa	2,001.71	2,079.02
Other Urban	1,828.74	2,059.22
Total	1,891.73	2,099.68

Source:- Table 4u

5. THE SOURCES OF RECEIPT/INCOME

At the country level, basic income account for 93.8 percent of total household receipts. Out of the total household receipt 53.0 percent is obtained from agriculture and related activities while 17.9 percent is from non-agricultural enterprises. The receipt from wages and salaries at the country level is 7.0 percent of total household receipt. Thus, these three major sources of household receipts accounts for 77.8 percent of the total household receipts. Remittances and other transfer incomes have a share of some 13.0 percent out of the total receipt (refer to Table 14a).

For rural households basic income takes the entire share, i.e., 95.8 percent, of household total receipts. Out of the total household receipt 69.9 percent is purely from agriculture, while 6.3 percent is from other non-agricultural activities. Wages and salaries in rural areas contribute only 2.6 percent to the total receipts of rural households. Thus, these three major sources of household receipts account for about four-fifths of the total household receipts. Remittances and other transfer incomes amounted to 14.7 percent of total receipts of rural households (refer to Table 14b).

At regional levels (rural part) household basic income account as follows: For Tigray 95.1 percents; for Afar 98.3 percent; for Amhara 97.3 percent; for Oromia 96.5 percents; for Somali 97.1 percent; for Benshangul-Gumuz 97.7 percent; for SNNPR 93.4 percent; for Gambela 98.8 percent; for Harari 97.7 percent; for Addis Ababa 47.7 percent and for Dire Dawa 99.7 percent of the household total receipt (Table 4r).

According to the report, except households in rural parts of Addis Ababa and Dire Dawa, over 50 percent of the source of receipts/income of households are generated from agriculture (refer to Table 4r).

The picture is different in the case of urban households. Here, basic income amounted to 87.9 percent of the total household receipts. The major source of receipts in the urban case is the receipt from non-agricultural activities and have a share of 51.2 percent out of the total receipts of urban households, while 19.5 percent is from wages and salaries. Only 4.2 percent of the total receipts of urban households are acquired through agricultural and related activities. These three sources in the urban centers contribute 74.9 percent to the total receipts of urban households. Remittances and other transfer incomes amounted to 8.1 percent of the total receipts (Table 14c). Meanwhile, the share of basic income from household total receipts for selected urban centers fall in the ranges 70.5 percent for Debre Zeit, and 97.7 percent for Harar (refer to Table 4U).

6. THE LEVEL AND PATTERN OF HOUSHEOLD EXPENDITURE

Table 12a, 12b and 12c also show additional information on the level and pattern of household expenditure. At the country level 52.7 percent of total household income is spent on food which is followed by house rent, energy, water and construction materials, 15.6 percent; clothing and footwear 9.6 percent; household non-consumption expenditure, 7.2 percent; furniture, furnishings, household equipment and operation 4.7 percent; miscellaneous goods and services 4.7 percent transport and communication 1.5 percent; personal care and effects 1.4 percent; medical care and health 1.1 percent; recreation entertainment and education, 0.6 percent; cigarettes and tobacco, 0.4 percent; and beverages , 0.4 percent.

In rural Ethiopia, 54.2 percent of the total household income is spent on food, followed by energy, water and construction materials which amounted to 15.8 percent; clothing and footwear amounted to 9.6 percent; Household Non-Consumption Expenses 6.1 percent; miscellaneous goods and services 4.9 percent; household equipment and operation 4.7 percent; personal care and effects 1.3 percent; and transport and communication, medical care and health 1.1 percent each.

The share of expenditure on cigarettes and tobacco was 0.4 percent; beverages 0.4 percent and recreation, entertainment and education was only 0.4 percent of total rural household expenditure.

On the other hand, the percentage share of total households income spend on food is similar for all regions (rural part) except for Dire Dawa and Harar which accounts 73.3 and 63.9 percents respectively (refer to Table 3r).

In urban Ethiopia, 47.1 percent of the total income of households goes to food. This is followed by expenses on rent, energy, water and construction materials, 15.0 percent; household non-consumption expenditure, 11.4 percent; clothing and footwear, 9.5 percent; furniture, furnishings, household equipment and operation, 4.7 percent; miscellaneous goods and services, 4.2 percent; transport and communication, 3.2 percent; recreation, entertainment and education, 1.6 percent; personal care and effects, 1.4 percent; medical care and health, 1.2 percent; cigarettes and tobacco 0.4 percent; and beverages, take 0.4 percent of total urban household expenditure.

In the case of Urban centers, the total households income spent on food is 42.3 percent for Debre Zeit and 53.0 percent for Dire Dawa, while, the total households income spent on food for other urban centers fall within 42.3 and 53.0 percents (refer to Table 3u).

Further, analyzing the data presented in Tables 12a, 12b and 12c, it would be of help to see the proportion of income spent on food across each income groups. It can be clearly observed from these tables that with the exception of a slight deviation in one or two income groups, the proportion of income spent on food more or less tends to decline as income increases. This is true for country as well as rural and urban households though the rate of decline slightly differ among country, rural and urban levels as shown in Summary Table Q.

To sum up the discussion, again, the expenditure pattern across income groups in Tables 12a, 12b and 12c, one can see that at the country level, household expenditure consistently exceeds income (the dis-savings group) up to the income group 5,400 - 6,599. Thereafter, as income increases the average propensity to consume declines while the average propensity to save recovers to increase between 3.3 percent and 27.8 percent (for details refer to Table 12a).

Summary Table Q

Percentage Distribution of Income Spent on Food by Income Group at Country, Rural and Urban Levels

Income group in Birr	Percentage of Income Spent on Food		
	Country	Rural	Urban
Below 600	61.50	60.89	61.80
600-999	56.45	57.16	55.35
1000-1399	59.64	59.22	60.36
1400-1999	57.39	58.35	54.64
2000-2599	54.79	54.79	54.75
2600-3399	55.64	55.91	53.96
3400-4199	56.63	56.89	54.65
4200-5399	54.40	55.24	49.04
5400-6599	53.43	53.88	51.18
6600-8999	52.63	53.85	46.28
9000-12599	50.27	52.27	43.47
12600-16199	44.17	46.44	39.41
16200-19999	44.45	46.87	41.89
20000 +	37.90	39.36	37.38
Total	52.71	54.23	47.08

Considering rural households, Table 12b shows that the rural household expenditure exceeds income up to the income group 5,400 - 6,599 Birr. However, starting from the income group 6,600 - 8,999 Birr income exceeds expenditure showing an increment of the average propensity to save between 5.9 percent and 37.1 percent; while the average propensity to consume declines.

For urban households, household expenditure continues to exceed income up to the income group 9,000 - 12,599 Birr. Thereafter, the average propensity to consume kept on declining while the average propensity to save increased between 11.1 percent and 14.5 percent of total household income (refer to Table 12c).

7. THE SAVING STATUS OF HOUSEHOLDS

It is important to throw some light on the status and nature of the investment capacity of Ethiopian households at rural and urban levels based on the survey result. The savings component in surveys of this nature is usually estimated from the income/expenditure categories of such items as "Equb", loans given out, loans repaid, bank deposit, pension contribution, interest and "Edir" contribution.

Out of the total expenditure/income, the above items could be obtained from detailed item level classification of Table 12.2a, 12.2b and 12.2c and according to the result at the country level, Ethiopian households save some 4.6 percent of their total earnings. In rural Ethiopia, households save 3.6 percent of their total earnings, while the saving component for urban households is 8.6 percent of total earnings.

8. THE PER CAPITA DAILY CALORIE INTAKE

At this point it is important to make some statements of the survey findings on the food and drink calories intake of the population. The calorie intake result is calculated by using different standard tables[1] and the survey data given in Tables 13a, 13b and 13c.

---

[1] *The Calorie intake result is calculated using:-*

a) Composition of foods, agricultural hand book No. 8, USDA, 1963.
b) Food composition table for use in Ethiopia by Gunnar Agren and Rosalid Gibson, Report No. 16.
c) ENI: Expended food composition table for use in Ethiopia, 1968.
d) FAO: Food composition table for use in Africa, 1968 .
e) Food composition tables for use in Middle East by P.L. Pellet and Sossy Shadarevian, 1970.

Summary Table R

Daily Per Person Calorie Intake by Food Group at Country, Rural and Urban levels

Food Group	Calories per person per day		
	Country Level	Rural	Urban
Cereals, Un-milled	369.11	408.22	153.48
Cereals, Milled	943.95	940.94	960.54
Pulses, Un-milled	105.68	113.96	60.03
Pulses, Milled,	119.09	114.51	144.38
Oil Seeds	10.83	12.10	3.81
Cereal Preparations (pasta products)	3.04	1.40	12.09
Bread and Others	30.80	9.59	147.72
Meat	13.99	9.03	41.29
Fish	0.23	0.22	0.25
Milk, Cheese and Eggs	23.81	25.20	16.15
Oils and Fats	50.18	33.52	142.04
Vegetables	33.92	33.77	34.76
Fruits	3.12	3.04	3.59
Spices	42.48	41.64	47.12
Potatoes, other tubers and stems	113.08	122.78	59.63
Coffee, Tea & Buck thorn leaves	35.63	38.84	17.95
Other Food Items	35.00	28.49	70.86
Non-alcoholic beverage	0.13	0.07	0.49
alcoholic beverage	4.54	4.38	5.48
TOTAL	1938.63	1941.70	1921.67

Thus, at the country level the total calorie intake per individual per day is 1938.6 as obtained from the survey result. It can be seen from the Summary Table R that out of this daily calorie intake cereals have the major contribution, that is, 67.3 percent, followed by pulses 11.6 percent, and potatoes, others tubers and stems 5.8 percent, oils and fats account for 2.6 percent of the total daily calorie intake of an individual while spices coffee and tea, other food items, vegetables, and bread and other prepared food take a share of 2.2 percent, 1.8 percent, 1.8 percent 1.7 percent, and 1.6 percent, in that order. On the other hand, the daily calorie intake of milk, cheese and egg, meat, oil seeds, beverages, and cereal preparations is 1.2 percent, 0.7 percent, 0.6 percent, 0.2 percent and 0.2 percent, respectively.

The rural per capita daily calorie intake was found out to be 1941.7 mainly divided among cereals which has a share of 69.5 percent, pulses 11.8 percent, potatoes, other tubers and stems 6.3 percent, spices for 2.1 percent, coffee, tea and buck-thorn leaves for 2.0 percent, fruit and vegetables, 1.9 percent, oils and fats 1.8 percent, other food items 1.5 percent, and milk and cheese and egg 1.3 percent. The remaining small percentage goes to oil seed, bread and other prepared food, ...etc. (see Table R)

Concerning Regional rural calories; the calorie intake per person per day for Tigray, Amhara, Benshangul-Gumuz and SNNPR is below the average calories intake at country level-Rural (Summary Table S).

At the urban level, the per capita daily calorie intake as obtained from the survey is 1921.7. It can be derived from the Summary Table R that here too, 58.0 percent of the total calorie goes to cereals, followed by pulses 10.6 percent, bread and other prepared food 7.7 percent, Oils and fats 7.4 percent; Other food items 3.69 percent, potatoes 3.1 percent, spices 2.5 percent, meat 2.2 percent, vegetables, 1.8 percent, coffee and tea leaves 0.9 percent and milk, cheese and egg 0.8 percent.

The average calories intake for the selected urban centers is as shown in Summary Table T. Thus, the average calorie intake per person per day ranges from 1,296.4 in Dessie to 2,011.8 in Harar.

Summary Table S: Average Calories Intake Per Person Per Day by Major Food and Drink Groups and Region - Rural

Major Consumption Items	REGION											
	TIGRAY	AFAR	AMHARA	OROMIA	SOMALI	BENSHANGUL	SNNPR	GAMBELA	HARAI	ADDIS ABABA	DIRE DAWA	TOTAL

APPENDIX I

ESTIMATION PROCEDURES OF TOTAL, RATIO AND SAMPLING ERROR

i) Estimate of domain total $\hat{Y}_h$ in categories I, II and III is given by:

$$\hat{Y}_h = \sum_{i=1}^{n_h} \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}} \sum_{j=1}^{h_{hi}} y_{hij} \qquad (1)$$

$$\sum_{i=1}^{n_h} \sum_{j=1}^{h_i} W_{hi} y_{hij}$$

$W_{hi} = \frac{M_h H_{hi}}{n_h M_{hi} h_{hi}}$ is the sampling weight

ii) The estimate of domain total $\hat{Y}_h$ in category IV is given by:

$$\hat{Y}_h = \sum_{i=1}^{n_h} \frac{M_h}{n_h n_{hi}} \sum_{j=1}^{n_{hi}} \frac{H_{hij}}{M_{hij} h_{hij}} \sum_{k=1}^{h_{hij}} y_{hijk} \qquad (2)$$

$$\sum_{i=1}^{n_h} \sum_{j=1}^{n_{hi}} \sum_{k=1}^{h_{hij}} W_{hij} y_{hijk}$$

$W_{hij} = \frac{M_h H_{hij}}{n_h n_{hi} M_{hij} h_{hij}}$ is the sampling weight

Where:

M_h = Total number of households in stratum h obtained from the sampling frame

M_{hi} = Total number of households in EA/PSU i (categories

I, II and III) or in urban center/PSU i (category IV), stratum h obtained from the sampling frame

n_h = Number of sample EAs (categories I, II and III) or urban centers (category IV) successfully covered in stratum h

H_{hi} = Total number of households obtained from the survey listing in EA/PSU i stratum h (categories I, II and III)

h_{hi} = Number of households successfully covered in EA/PSU i stratum h (categories I, II and III)

M_{hij}= Total number of households in EA/SSU j, urban center/PSU i and stratum h obtained from the sampling frame (category IV)

n_{hi}= Number of sample EAs successfully covered in urban center/PSU i stratum h (category IV)

H_{hij}=Total number of households obtained from the survey listing in EA/SSU j, urban center/PSU i and stratum h (category IV)

h_{hij}= Number of households successfully covered in EA j/SSU, urban center/PSU i and stratum h (category IV)

y_{hij} = The observed value of a characteristic y for household j in EA/PSU i stratum h (categories I, II and III)

y_{hijk}= The observed value of a characteristic y for household k in EA/SSU j, urban center/PSU i and stratum h (category IV)

Note: Estimate of total at country level, $\hat{Y}$, is obtained by summing up stratum/domain total estimates.

$$\hat{Y}=\sum_{h}\hat{Y}_{h}$$

iii) Sampling error of estimates:

The variance of domain total estimate is:

$$V(\hat{Y}_{h})=\frac{n_{h}}{n_{h}-1}\left[\sum_{i=1}^{n_{h}}\hat{Y}_{hi}^{2}-\frac{\hat{Y}_{h}^{2}}{n_{h}}\right] \qquad (3)$$

in which $\hat{Y}_{hi}=W_{hi}\sum_{j=1}^{h_{hi}}y_{hij}$ (categories I, II and III)

and $\hat{Y}_{hi}=\sum_{j=1}^{n_{hi}}W_{hij}\sum_{k=1}^{h_{hij}}y_{hijk}$ (category IV)

$$V(\hat{Y})=\sum_{h}V(\hat{Y}_{h}) \qquad (4)$$

$$SE(\hat{Y}_{h})=\sqrt{Var(\hat{Y}_{h})} \qquad (5)$$

Percentage Coefficient of variation (CV) of domain total:

$$CV(\hat{Y}_h)=\frac{\sqrt{Var(\hat{Y}_h)}}{\hat{Y}_h}\times 100 \qquad (6)$$

Ninety five confidence interval (CI) of domain total:

$$\hat{Y}_h \pm 1.96 \times SE(\hat{Y}_h) \qquad (7)$$

ii) Estimator of ratio:

$$\hat{R}_h=\frac{\hat{Y}_h}{\hat{X}_h} \quad \text{and} \quad \hat{R}=\frac{\hat{Y}}{\hat{X}} \qquad (8)$$

Where the numerator and the denominator are estimates of domain totals of characteristics y and x, respectively.

$$Var(\hat{R}_h)=\frac{1}{\hat{X}_h^2}[Var(\hat{Y}_h)+\hat{R}_h^2 Var(\hat{X}_h)-2\hat{R}_h Cov(\hat{Y}_h,\hat{X}_h)] \qquad (9)$$

in which $$Cov(\hat{Y}_h,\hat{X}_h)=\frac{n_h}{n_h-1}[\sum_{i=1}^{n_h}\hat{Y}_{hi}\hat{X}_{hi}-\frac{\hat{Y}_h\hat{X}_h}{n_h}]$$

Estimates of standard error, coefficient of variation and confidence interval for the ratio estimate can be calculated by adopting formulas 5, 6 and 7.

APPENDIX II

SAMPLING ERRORS FOR SELECTED CHARACTERISTICS
