Objectives

The main objectives of collecting retail prices in urban centers are as follows.

1. To study the level of retail prices.
2. To assess the disparity of prices charged at different distribution levels in each region and between regions.
3. To study changes in the economy.
4. To provide data for national accountants and research workers.
5. To prepare retail price indices.

Scope and coverage

This report covers prices of major agricultural and industrial groups including food, drinks, tobacco, household items, clothing, footwear, transportation, communication, medical care, education, recreation, building materials, farm equipment, hotel services (hotel bed rooms and food) and other goods and services collected from various outlets in the twenty two urban centers. Along the collection of retail prices of goods and services in Merkato, Kirkos, Selassie and Piazza areas in Addis Ababa the price of food, drinks and tobacco are also collected from selected nine European type groceries.

The selected urban centers are:-

- | | |
|-----------------|-------------------|
| 1. Addis Ababa | 12. Dire Dawa |
| 2. Agaro | 13. Ghimbi |
| 3. Arba Minch | 14. Goba |

| | 23. Shashemene |

Introduction

The Central Statistical Authority has been collecting prices of goods and services in Addis Ababa since March 1965 (Megabit 1957 E.C.). However, because of the increasing demand for the data, the coverage of the survey, which was limited only to Addis Ababa was extended to include twenty two * other urban centers.

Similar to the previous ones this report which covers the year 1989 consists of two parts. The first part consists of tables of average retail prices of goods and services while the second is on average prices of hotel services. The first part provides monthly average retail prices of goods and services in each of the twenty two urban centers for 1989 (1981/82 E.C.), annual average retail prices in Addis Ababa from 1972 - 1989 (1964/65 - 1981/82 E.C.) and retail prices of food, drinks and tobacco collected from European type groceries in Addis Ababa for 1989 (1981/82 E.C.). Part two of the report is appearing for the second time and is presenting the results of average prices of hotel services in twenty two selected urban centers. As we have mentioned in earlier reports, the collection of these prices in urban centers other than Addis Ababa and Asmara has been conducted simultaneously with the retail prices on quarterly basis since September 1979 (Meskerem 1972 E.C.). However, in the latter centers the collection began in March 1979 (Megabit 1971 E.C.) and September 1981 (Meskerem 1974 E.C.), respectively. This report which covers the year 1989 (1981/82 E.C.) provides monthly average prices of hotel services for twenty two urban centers and annual average price of hotel services for twenty three urban centers from 1980 - 1989 (1972/73 - 1981/82 E.C.). Annual average price for the year 1989 is the average of 12 months while the rest, except for Addis Ababa, are averages of prices for at least 2 quarters of the year.

This eighth edition updates Statistical Bulletin Number 71 of September 1989. Earlier issues on the same subject are Statistical Bulletin Nos. 18, 28, 32, 41, 54, 66 and 71.

* Data for 1989 for Mekelle is not available.

Note

1. Before September 1988 in Addis Ababa, Asmara and Mekelle retail prices were collected monthly, whereas in the other urban centers, because of limited manpower and cost consideration, the collection was done quarterly i.e., in March, June, September and December. However, from September 1988 onwards, all prices are collected monthly.
2. The monthly prices of hotel services are the averages of prices collected from three selected hotels in that month and the annual average prices for 1989 are calculated using January to December figures.
3. The survey covered only middle class hotels. While every effort has been made to select hotels of similar standard in all urban centers, minor differences were observed during the survey. Moreover, the selected hotels in Assab are relatively of higher standard compared to those in the other urban centers. Thus, the prices for bedroom services in Assab are significantly higher than in the other twenty two urban centers.
4. The prices of food and bedroom services in Asmara were collected from restaurants and rooming houses, respectively. This is because there are no middle class hotels that provide both services.
5. The survey had been discontinued partially in July 1989 when supervisors and enumerators took their annual leave.
6. Metric units have been used in collecting prices except certain items whose units of measurements are in pieces or number. In the case of fire wood, volume measurement has been used in all urban centers, except for Asmara, where weight measurement has been used.
7. The minimum that the balance can weigh is 10 grams. Thus items which are sold in small quantities and whose weight fall below 10 grams can not be weighed as accurately as possible and as a result may affect the reliability of the prices of these items in some respects.
8. The symbol " ___ " is used for data not available or doubtful.

Definitions

1. Urban Center

An urban center is defined as an area which has a population of at least 2,000 persons and which is normally administered by a municipality. The selected urban centers satisfy at least one of the following conditions:-

- a) Capital of an administrative region.
- b) Industrial Center.
- c) Center for trade and commercial activities.

2. Retail Price

A retail price is the money cost to the final purchaser of a specified unit of sale. It is inclusive of all sales and excise taxes.

3. Hotels

Hotels are establishments rendering combined services of rooming, food and drinks on a fee basis.

4. Restaurants

Restaurants are establishments selling food and drinks.

5. Rooming Houses

Rooming houses are establishments engaged in renting bedrooms.

Method of Data Collection

The retail prices of goods and services are collected from major outlets in the selected urban centers by enumerators with the help of kitchen balance and measuring tape. The outlets include markets, kiosks, groceries, butcheries, hotels, pharmacies and other service establishments where the households purchase most of the goods and services for household consumption and other purposes.

Most of retail prices of goods and services are collected from traders. However, sometimes, some prices are obtained from consumers at the time of purchase. In addition wages of domestic servants and coolies charges are obtained from households. For each item a maximum of three price quotations are collected from three independent retailers on the same day. Likewise, prices of hotel services are obtained by interviewing the owners of the hotels or responsible persons on the spot.

In general the prices are collected for about seventeen days beginning on the 13th day of each European calendar month. This period is selected in order to facilitate comparability of data of other towns with that collected in Addis Ababa. Moreover, it is assumed that expenditures of households whose members earn their wages and salaries in European or Ethiopian calendar month are covered best during this period. The collection of prices of hotel services is completed in one day.
