Appendix: Retail Price Collection form sample A.I

INTRODUCTION

The Central Statistical Authority, CSA, started the collection of rural price in May 1981 in selected Farmers' Association Areas, FAs, in 12 Regions, excluding Tigray, Eritrea and nomadic areas. Thus, as part of the Rural Integrated Household Survey Program, RIHSP, which was launched in 1980, the Rural Price Survey, covering both retail price and producer price, is conducted on a monthly basis.

This report provides results of average retail price of goods and services for the period of September 1991 to July 1992 (Meskerem 1984 to Hamle 1984 of Ethiopian Calendar). Figures are presented in three parts. The last tables of each part provides annual averages of retail prices based on the Ethiopian fiscal year, representing the period from 8 July 1991 to 7 June 1992 (Hamle 1983-Sene 1984).

This twelfth issue updates Statistical Bulletin Number 117. Earlier issues on the same subject are Statistical Bulletins Numbers 37, 45, 57, 64, 83, 93, 96, 106, 107, 115 and 117.

Objectives

The collection of retail price in rural areas has the following main objectives:

1. to study the level of retail prices,
2. to study the disparities between prices charged at various distribution levels,
3. to study changes in the economy,
4. to provide data for national accountants in the valuation of output,
5. to construct rural price index.

Scope and Coverage

The scope and coverage of the survey are constantly under review and necessary improvements are effected from time to time in an effort to incorporate commodities mostly consumed by the rural population.

Currently the major groups of items covered in the survey include food, drinks, tobacco and stimulants,household equipments, clothing, footwear, energy, medical care, personal care and effects, education, recreation, building materials and other goods and services.

Information on retail price of selected agricultural and industrial commodities is collected from retail outlets in the sample FAs.The allocation of FAs to the regions takes into account the size of the regions and has been considered to be a reasonable minimum size to provide meaningful estimates at Regional level. However, one can see from Table A that the number of FAs covered are by far less than sampled FAs in Eastern regions and in Gambela. Only one Farmers' Association out of twenty sampled FAs was covered in Dire Dawa region. In addition, data collection was conducted only for four months in these regions. Due to these and other reasons users should exercise caution while using data for the above mentioned regions.

Although, data for all regions were collected from October 1991 to February 1992, only five and seven regions were covered in September 1991 and April 1992, respectively. Thereafter, the number of regions covered in the survey declined from 15 in March 1992 to 11 in July 1992 while a fluctuation was seen in May 1992. Moreover, due to the reallocation of field staff to the Census Cartographic Map Works, prices survey was suspended since August 1992.

Table A: Number of sampled FAs,actual coverage and number of months representing price averages by region.

Method of Data Collection

Each month of the Ethiopian Calendar (September to August) data collection staff of the CSA attempt to collect prices in retail markets for a list of about 476 items in the selected FAs or from adjacent market places where households purchase most of the goods and services for consumption and other purposes. For each item on the price list the data collector is expected to get a maximum of three prices from three different retailers or shops in the local market places.(see the sample questionnaire in the appendix).

Enumerators are familiar with the market places and where various items can be purchased. If one retailer or shop does not have the items, they continue searching until they find one that does. Although price is collected from traders, in some cases price is obtained from consumers at the time of purchase. Retail price data is mainly collected on market days throughout the reference month considering the work load of the enumerators and in accordance with the purchasing habits of consumers in the selected FAs.

Since an interview method of data collection is utilized rather than an actual purchase and recording of price, it may result, in some instance, in exaggeration or under estimation of prices.

However, since enumerators were permanently assigned to each sample FA and reside there, they have a good chance of familiarizing themselves and be on friendly terms with retailers and owners of economic establishments the result of which is a reasonably reliable and accurate information over time.

Definition

A retail price is the money cost to the final purchaser of a specified unit of sale. It is inclusive of all sales and excise taxes.

Note:

1. The average column in each month gives a simple average of the corresponding item over the regions.
2. The minimum that the balance can weigh is 10 grams. Thus items which are sold in small quantities and whose weight fall under 10 grams cannot be weighed as accurately as possible and as a result may affect the reliability of the price of these items in some respect.
3. The symbol "N.A." is used for data not available or doubtful.
