CENTRAL STATISTICAL AUTHORITY

AGRICULTURAL SAMPLE SURVEY

1997/98 (1990 E.C.)

REPORT ON

LAND UTILISATION

(PRIVATE PEASANT HOLDINGS)

VOLUME IV

ADDIS ABABA

DECEMBER, 1998

THE FEDERAL DEMOCRATIC REPUBLIC OF ETHIOPIA
CENTRAL STATISTICAL AUTHORITY

AGRICULTURAL SAMPLE SURVEY

1997/98 (1990 E.C.)

REPORT ON

LAND UTILISATION

(PRIVATE PEASANT HOLDINGS)

VOLUME IV

ADDIS ABABA

DECEMBER, 1998

TABLE OF CONTENTS

Page

List of Tables ii
List of Figures xx
PART I. INTRODUCTION AND OBJECTIVES OF THE SURVEY 1
1. Introduction 1
2. Objectives of the Survey 2
PART II. SURVEY METHODOLOGY , DATA COLLECTION AND PROCESSING 3
1. Scope, Coverage and Content of the Survey 3
2. Concepts and Definitions 5
3. Sample Design 8
4. Field Organization 9
5. Training of Field Staff 9
6. Method of Data Collection 9
7. Data Processing 10
a) Editing , Coding and Verification 10
b) Data Entry , Cleaning and Tabulation 10
PART III. SUMMARY OF SURVEY RESULTS 13
1. Land Use Area Estimation 13
2. Agricultural Households , Holders , Total Land , Average Land Holding Per Household and Average Land Holding Per Holder 79
3. Agricultural Households , Holder , Members and Average Household Size 146
4. Total Number of Agricultural Households by Size of Holding and Size of Household 209
5. Number of Holders by Age and Type of Holding 273
6. Number of Holders by Sex and Type of Holding 336
7. Number of Holders by Educational Attainment and Type of Holding 372
8. Number of Agricultural Households , Cropland and Average Cropland by Type of Crop and Size of holding 407
9. Estimate of Area Under all Crops by Size of Holding 466
Appendix I Estimation Procedures of Total , Ratio and Sampling Errors 529
Appendix II Estimates , Their Standard Error and Coefficient of Variations 535

LIST OF TABLES

Estimates and Percentage of Area under Land Use by Size of Holding for Private Peasant Holdings, 1997/98 (1990 E.C.)

PART I

INTRODUCTION AND OBJECTIVES OF THE SURVEY

1. INTRODUCTION

Agriculture contributes enormously to the Ethiopian economy. A significant amount of the Gross Domestic Product (GDP) is obtained from the Agricultural sector of the economy while engaging a majority of the population. The collection of reliable, comprehensive and timely statistical information is thus essential for policy and decision making, as well as other uses. In this regard, in the interest of the country, the Central Statistical Authority (CSA) has exerted every effort to provide users and policy makers with reliable and timely agricultural data.

This report presents survey results on estimates of land use, number of agricultural households, number of holders, number of household members, average household size, and land by size of holding, number of holders by type of holding, age, sex, and educational status of agricultural holders within the private peasant sector of the economy. The report also includes the objectives of this annual survey, while outlining : the scope, coverage, and content of the survey; sample design; field organization; training of field staff; and, the method of data collection. Estimation procedures and formulations for estimates of totals and variance for total area of land during main (Meher) season are presented in Appendix I. Estimates of the standard errors with the corresponding coefficient of variations (CVs) for all land uses are presented in Appendix II .

2.OBJECTIVES OF THE SURVEY

The general objective of CSA's Agricultural Sample Survey (AgSS) is to collect basic quantitative information on the country's agriculture that is considered essential for development planning, socio-economic policy formulation, food assistance, etc. The AgSS is composed of four components: a forecast survey of ten households, a Meher season survey of twenty-five households, a livestock survey of forty households, and a survey of the Belg season crop area and production.

The specific objective of the Meher season land utilization survey is to estimate the total land used for various purposes by type of land use and the number of agricultural households, holders, members of agricultural households, average household size, average land holding per household and others. This report is based on the private peasant holdings in sedentary rural areas of the country, further divided by regions and zones.

PART II

SURVEY METHODOLOGY, DATA COLLECTION AND PROCESSING

1. SCOPE, COVERAGE AND CONTENT OF THE SURVEY.

The 1997/98 (1990 E.C.) annual Agricultural Sample Survey used a sampling frame designed to cover the sedentary rural agricultural population in all regions of the country (urban and nomadic areas were not included in the survey). Illustrated in Table A is a break down of the sample distribution as expressed by regions, zones and weredas. A total of 56 zones and 409 weredas were actually sampled by the survey.

The lowest level sampling unit used for this survey is defined as an enumeration area (EA) as identified for the 1994 Population Census. For the 1997/98 AgSS survey a total of 1380 enumeration areas were selected from all region of the country. Due to various reasons, 31 of them were incompletely enumerated which resulted in the survey actually covering 1349 enumeration areas (EAs) From each of the selected EAs a representative sample of 40 agricultural households were selected to estimate the various agricultural population items of interest of the sampled EA.

Of these 40 agricultural households, the first 25 were used for obtaining information on area under crops, Meher and Belg season production of major crops, land utilization, agricultural practices, crop damage, and quantity of agricultural inputs used. A total of 34,770 agricultural households were covered and 172,137 fields belonging to these households under different land uses were objectively measured.

Table A: AREA COVERAGE OF THE 1996/97 AGRICULTURAL SAMPLE SURVEY

REGION	NUMBER OF ZONES			NUMBER OF WEREDAS	
	TOTAL	ZONES SAMPLED FOR THE SURVEY	NOT COVERED BY THE SURVEY	PLANNED TO BE SAMPLED FOR THE SURVEY	ACTUAL NUMBER OF WEREDAS SAMPLED FOR THE SURVEY
TIGRAY	4	4	-	34	31
AFAR[1]	5	3	2	8	7

A. ABABA[3]	6	2	4	5	5
DIRE DAWA	1	1	-	1	1
TOTAL	70	56	14	424	409

Note

1 - Afar region has a total of five zones, but only three zones have significant sedentary rural population.

2 - Somalie region has a total of nine zones, however only three zones have significant sedentary rural population.

3 - Addis Ababa has a total of six zones, however, only two zones have rural settled population. In the remaining four zones the entire population is urban residents.

S.N.N.P.R = Southern Nations and Nationalities Peoples' Region

2. CONCEPTS AND DEFINITIONS.

In order to collect standardized data of acceptable quality the same concepts and definitions must be used by all field enumerators during data collection. Below are defined some of the more important concepts and definitions used for the survey:

Enumeration Area (EA): An enumeration area in rural parts of the country is a locality that is less than or equal to a farmer's association in geographical area and usually consists of 150 - 200 households.

Holder: A holder is a person who exercises management control over the operations of the agricultural holding and makes the major decision regarding the utilization of the available resources. He has primary technical and economic responsibility for the holding. He may operate the holding directly as an owner or as a manager. Under conditions of traditional agricultural holding the holder may be regarded as the person, who with or without the help of others, operates land or raises livestock in his own right, i.e. the person who decides on what, when, where and how to grow crops or raise livestock, and has the right to determine the utilization of the products.

Holding: a holding is all the land and/or livestock kept which is used wholly or partly for agricultural production and is operated as one legal entity by one person alone, or with others without regard to management, organization, size or location.

Size of Holding: In this report the size of holding is determined by total area of land under different uses, i.e. area under temporary crops, permanent crops, fallow land, grazing land, wood land and other land.

Household: A household may be either;

a) a one person household, that is a person who makes provisions for his own living without combining with any other person to form part of a multi-person household or

b) a multi-person household, that is, a group of two or more persons who live together and make common provisions for food or other essentials of living. The persons in the group may pool their incomes and have a common budget to greater or lesser extent. They may be related or unrelated persons, or a combination of both. These persons are taken as members of the household.

Agricultural household: A household is considered an agricultural household when at least one member of the household is engaged in growing crops and/or breeding and raising livestock in private or in combination with others.

Parcel:- A parcel of holding is any piece of land entirely surrounded by land, water, road, forest, ... etc. which is not part of the holding. It may consist of one or more cadastral units, plots or fields adjacent to each other.

Field:- A field is defined as any plot of land which is a parcel or part of a parcel under the same or mixed crops.

Meher (Main) Season Crop:- Any crop harvested from Meskerem (September) to Yekatit (February) is considered as Meher season crop.

Belg Season Crop:- Any crop harvested during the months of March (Megabit) to August (Nehase).

Temporary Crops: Crops which are grown under a cycle of less than one year, sometimes only a few months with an objective to be sown or replanted again for additional production following the current harvest.Continuously grown crops planted in rotation are also considered temporary crops since each is harvested and destroyed by ploughing in preparation for each successive crop.

Permanent Crops: Crops which are grown and occupy land for a long period of time, not requiring replanting for several years after each harvest, are considered permanent crops. All fruit trees (i.e. oranges, mandarin, banana, etc.) and trees for beverages (i.e. coffee, tea, etc.) are considered permanent crops, but meadows and pastures are excluded.

Grazing Land: Land used for growing herbaceous forage crops, either through cultivation or naturally, is considered to be grazing land.

Fallow Land: Land which has been or intended to be kept at rest for at least one agricultural year and a maximum idleness of less than five years is considered fallow land.

Wood Land: All tracts of timber, natural or planted and part of the holding, which has a value as wood, timber, other wood products and/or used for protection. Forest land used for recreational purposes would not be included as wood land.

Other Land Uses: Land occupied by the holders' house and/or buildings, parking areas, gardens, barn, wells and ponds, would be included as other land uses.

3. SAMPLE DESIGN.

A two-stage stratified sample design is used for the 1997/98 (1990 E.C.) Annual Agricultural Sample Survey. All regions except Harari, Addis Ababa, Dire Dawa and Gambella are broken into zones and treated as strata/reporting levels for survey summarization purposes. For the four specifically mentioned regions, the reporting levels are the regions themselves. The sample design first-stage consists of primary sampling units (PSUs) in all strata which are enumeration areas (EAs). The second-stage sampling units are agricultural households selected as the secondary level sampling units. The survey questionnaires are administered to all agricultural holders in the sampled agricultural households.

Based on cost and field enumeration considerations, a fixed number of sample EAs were allocated to each stratum/ reporting level taking into consideration the desired precision of the estimates and number of households per stratum. The overall sample number of EAs in a stratum was proportionately allocated to zones/special weredas within stratum based on their number of households. From within each Zone/Special Wereda the sample EAs were selected with probability proportional to size, size being the total number of households identified for EAs as obtained from the 1994 Population Census. From each sample EA, 40 agricultural households were sampled systematically without replacement from a newly enumerated list of agricultural households of which the first 25 agricultural households were used to obtain information on crop planted area and production, land utilization and agricultural practices of both Meher and Belg seasons. Information on land use was collected from all twenty-five households and was collected on separate questionnaires from each holder within these 25 sampled households.

The estimation formulation procedures for totals and ratios of the agricultural variables estimated and the measure of precision for all estimates are presented in ***Appendix I and II .***

4. FIELD ORGANIZATION.

CSA Branch Statistical Office heads, field supervisors and enumerators, other support staff and drivers were all involved in the conduct of the Agricultural Sample Survey data collection effort. To accomplish the data collection, all field enumerators were equipped with the necessary survey equipment (i.e. compass, protractor, ruler, measuring tape, balance scale, poles, ropes, sample bags,...etc.) at the completion of training. To assist with the field work and data collection activities a certain number of four-wheel drive vehicles were used for supervision and collection of completed questionnaire.

5. TRAINING OF FIELD STAFF.

The field staff training program was carried out in two stages. The first-stage consisted of trainees from the head office, Branch Statistical Office heads and some of the field supervisors being given training for one week at CSA's headquarters complex in Addis Ababa. Many of those trained in the first-stage conducted similar training for field supervisors and enumerators for 10 days in all of CSA's 15 branch offices which are distributed around the country. During this second-stage training, the field staff were given detailed class room instruction on the objectives and uses of the AgSS, concepts and definitions of terms used, the method of area measurement, method of crop cutting, as well as correct interviewing procedures,... etc. The enumerators' training also included a field practice to reinforce the concepts discussed in the classroom with regard to field measurement and crop cutting data collection.

6. METHOD OF DATA COLLECTION.

Data for the AgSS survey were recorded on questionnaires using both subjective and objective methods. Information on agricultural practices (application of fertilizer, pesticide, use of improved seed and irrigation) were collected subjectively by interviewing the holders located in each sampled household.

The objective measurement procedures for area measurements were carried out for the 25 selected households from each sampled EA. This required that all separate fields by land area utilization be physically measured using compasses and measuring tapes.

7. DATA PROCESSING

a. EDITING, CODING AND VERIFICATION.

To insure the quality of the collected survey data an editing, coding and verification instruction manual was written, and sixty-five editors, coders and verifiers were trained for two days to edit, code and verify the data using the aforementioned manual as a reference and teaching aid.

The enumerator completed questionnaires were edited, coded and later verified by supervisors on a 100% basis before the questionnaires were sent to the data processing unit for data entry. The editing, coding and verification of all questionnaires were completed in thirty eight days.

b. DATA ENTRY, CLEANING AND TABULATION.

Before starting data entry professional staff of Agriclultural Statistics Department of the Central Statistical Authority prepared edit specifications for use on personal computers utilizing the Integrated Microcomputer Processing System (IMPS) software for data consistency checking purposes.

The data on the coded questionnaires were then entered into the IMPS software on personal computers and the entry was verified on a 100% basis. The data was then checked and cleaned using the edit specifications prepared earlier for this purpose. Thirty data encoders were involved in this total process and it took thirty-three days to complete the job. Finally, tabulation was done on personal computers to produce results as indicated in the tabulation plan.

PART III

SUMMARY OF SURVEY RESULTS

1. LAND USE AREA ESTIMATION

During the 1997/98 (1990 E.C.) Agricultural Sample Survey data on different land uses were collected. Most of the land within the private peasant holdings was under temporary crops and/ or permanent crops. From the survey results; it was also found that the remaining portion of land was used as grazing land, wood land, fallow land and/or some other puposes.

As indicated in the survey results (Summary Table B) the total land area under different land uses was estimated to be 9.06 million hectares at country level. Out of this, 7.01 million hectares (77.35%) of land was under temporary crops, 558.21 thousand hectares (6.16 %) was under permanent crops, 597.71 thousand hectares (6.60 %) was used for grazing land, 503.99 thousand hectares (5.56 %) of land was kept as fallow land, 35.30 thousand hectares (0.39 %) was used for wood land, and 356.70 thousand hectares (3.94%) was used for some other purposes. The largest portion of the total land holdings (77.35 %) was used for cultivating temporary crops while the smallest portion (0.39 %) was used for wood land (within the private peasant holding). For details, refer Table 1.1

Summary Table B: Area of Land in different uses.

Type of Land Use	Area	
	'000 HA	%
Land under Temporary Crops	7008.74	77.35
Land under Permanent Crops	558.21	6.16
Grazing Land	597.71	6.60
Fallow Land	503.99	5.56
Wood Land	35.30	0.39
Other Land uses	356.70	3.94
All Land Uses	9060.65	100

In this report, size of holdings were classified into seven size groups. These groupings are:

Group I- under 0.10 hectare
Group II- 0.10 - 0.50 hectare
Group III- 0.51 - 1.00 hectare
Group IV- 1.01 - 2.00 hectares
Group V- 2.01 - 5.00 hectares
Group VI- 5.01 - 10.00 hectares and
Group VII- 10.01 and above hectares.

As illustrated in Table 1.1, of the total private holdings under teporary crops, over one-third (35.85%) of them fall in Group IV, i.e. 1.01-2.00 hectares. On the other hand , most of the holdings under permant crops (54.43%) fall in Group II, i.e. 0.10-0.50 hectare. The survey result also indicated that 37.57% of grazing land holdings and 46.14% of land kept as fallow fall in Group II. It should also be noted that 35.24% of the total land used for wood land fall in Group I, which is less than 0.10 hectare.

Also, in this table, the total area of peasant holdings and percentage by size group are presented. The largest estimate (30.18 %) of the total area of peasant holdings is found in Group IV. The largest size group (Group VII) accounted for only 0.66 % of the total area of peasant holdings. The survey results on land utilization at the regional and zonal levels are presented in Tables 1.3 - 1.13.

2. AGRICULTURAL HOUSEHOLDS, HOLDERS, TOTAL LAND, AVERAGE LAND HOLDING PER HOUSEHOLD AND AVERAGE LAND HOLDING PER HOLDER.

The survey results indicate that the total number of agricultural households in rural areas (excluding nomadic areas) is estimated to be 9.29 million, while the total number of agricultural holders is 9.51 million.The total land area under different land uses is about 9.06 million hectares, and the average land holding per household and per holder are estimated to be 0.98 hectares and 0.95 hectares, respectively. See Summary Table C.

Summary Table C: Number of Agricultural Households, Holders ,Total Land Area Average Land Holding per Household and per Holder.

Items	Number/ Area
Households ('000)	9292.87
Holders ('000)	9,513.91
Total Land Use ('000 HA)	9,060.65
Average Land Holding/ Household (HA)	0.98
Average Land Holding/ Holder (HA)	0.95

As mentioned earlier sizes of holdings have been categorized into seven groups. Based on this classification the estimates of the number of agricultural households and holders falling in each size group respectively are as follows: 583.47 thousand households (6.28 %) and 584.40 thousand holders (6.14 %) in Group I; 3.02 million households (32.50 %) and 3.09 million holders (32.44 %) in Group II; 2.5 million households (26.90 %) and 2.54 million holders (26.67) in Group III; 2.14

million households (23.00 %) and 2.19 million holders (23.00 %) in Group IV; 982.89 thousand households (10.58 %) and 1.04 million holders (10.88 %) in Group V; 64.06 thousand households (0.69%) and 75.96 thousand holders (0.80%) in Group VI; and 4.36 thousand households (0.05 %) and 6.24 thousand holders (0.07 %) in Group VII.

It can be seen that most of the agricultural households and holders (32.50% and 32.44%, respectively) have a total size of holding ranging from 0.1 - 0.5 hectare each and fall in Group II. The second largest number of agricultural households and holders fall in Group III. i.e 26.90% and 26.67%, respectively.

Unlike the size of agricultural households, most of the land falls in Group V, consisting of 30.66 % and in Group IV consisting of 33.27 % of the total land in rural peasant holdings.

It should be noted that only 0.05 percent of the total agricultural households and 0.07 % of the total agricultural holders own more than 10 hectares each, accounting for only 0.99 % of the total holding area. Details are given in Table 2.1. Estimates of regional distribution of agricultural households, holders, land use and average land holding per household and per holder are presented in Table 2.2.

3. AGRICULTURAL HOUSEHOLDS, HOLDERS, MEMBERS AND AVERAGE HOUSEHOLD SIZE

As illustrated in the summary table below in 1997/98 (1990 E.C.) the total agricultural households and holders were estimated to be 9.29 and 9.51 million, respectively. The total rural agricultural population (excluding nomadic areas and non-agricultural households) was estimated to be 48.36 million. From the survey result, it is also observed that the average rural sedentary agricultural household size is 5.20.

The projected rural population of the country for the same year was 51.19 million. The difference is attributed to:

1. coverage of only the rural sedentary portion of the population by the survey
2. the exclusion of nomadic areas from the survey
3. the exclusion of non-agricultural households from the survey

Summary Table D. Number of Agricultural Households, Holders, Household Members and Average Household Size

Items	Number
Households ('000)	9,292.87
Holders ('000)	9,513.91
Household Members ('000)	48,363.27
Average Hosehld Size	5.20

As indicated in Table 3.1, the average household size ranges from 3.99 to 7.70 members per household from Group I to Group VII.

4. TOTAL NUMBER OF AGRICULTURAL HOUSEHOLDS BY SIZE OF HOLDING AND SIZE OF HOUSEHOLD

The estimates of agricultural households by size of holding and size of agricultural households are presented in Table 4.1 at country level, in Table 4.2 at regional level and in Tables 4.3 to 4.13 at zonal level. The percentage distribution of agricultural households by number of household members is summarized as follows.

Of the total agricultural households, 2.41% of them had only one member each, 23.58% had 2 - 3 members each, 33.16% had 4 - 5 members, 36.37% had 6 - 9 members each, 4.46% had 10 members and above each, and 0.02% did not report their household sizes. This result indicates that most of the agricultural households have 6-9 members each while the number of households having only one member each are small in number. For details, refer to Table E below.

Summary Table E: Total Number of Agricultural Households by Size of Household

Size of Household	Household	
	Number ('000)	%
One Member	223.5	2.41
2 - 3 Members	2,191.24	23.58

5. NUMBER OF HOLDERS BY AGE AND TYPE OF HOLDING

Attempt has been made to categorize agricultural holders by their age and type of holding. The types of holding were categorized into three groups as follows:

Category I Crops only
Category II Livestock only
Category III Combination of Crop and Livestock

Bearing the above categories in mind, 1.93 million holders (20.32 %) are estimated to fall in Category I, 191.2 thousand holders (2.01 %) fall in Category II, and 7.4 million holders (77.68 %) fall into Category III, at country level. See summary table below).

It can be seen that most of the holders have a combination of crops and livestock and is consistent across all regions and zones. See Tables 5.3 - 5.13, for details.

Summary Table F: Total Number of Holders by Type of Holding

Type of Holding	Total Holders	
	Number ('000)	%
Crop Only	1,932.75	20.32
Livestock Only	191.2	2.01
Crop and Livestock	7,389.97	77.68
All Holding	9,513.90	100

It should also be noted that, considering the age distribution of holders, the highest number of holders fall in age group of 30 - 39 years (25.51%) while the smallest proportion of holders fall in age group of under 18 years (0.66%). For details, refer to Tables 5.1 - 5.13 .

6. NUMBER OF HOLDERS BY SEX AND TYPE OF HOLDING

The total number of holders is estimated to be 9.51 million, of which 8.12 million (85.35%) are males, and 1.39 million (14.65 %) are females. Out of the total male

Summary Table G: Number of Holders by Sex and Type of Holding

Type of Holding	Sex of Holder				Total	
	Male		Female			
	Number	%	Number	%	Number	%
Crop Only	1,526.60	18.80	406.15	29.13	1,932.75	20.31
Livestock Only	108.98	1.34	82.20	5.90	191.19	2.01
Crop & Livestock	6,483.96	79.86	906.01	64.98	7,389.97	77.68
Total	8,119.54	100	1,394.37	100	9,513.19	100

holders, 6,483.96 thousand holders (79.86%) are engaged in crop and livestock, whereas, 18.80% in crop and 1.34% in livestock only. Similar trends have also been observed concerning female holders with respect to the type of holding they have, i.e. 64.98% are engaged in both crop and livestock, 29.13% in crop and 5.90% in livestock only. According to the survey result one can conclude that close to 78% of holders at country level exercise both crop cultivation and livestock husbandry.

The estimates of holders by sex and type of holding at country level is given in Table 6.1 while the regional and zonal estimates are given in Tables 6.2 - 6.13

7. NUMBER OF HOLDERS BY EDUCATIONAL ATTAINMENT AND TYPE OF HOLDING

For the purpose of this survey, educational attainment was categorized into seven groups as follows:

1. Illiterate (who can not read and write)
2. attended/completed grades 1- 3
3. attended/completed grades 4- 6
4. attended/completed grades 7- 8
5. attended/completed grades 9- 11
6. 12^{th} grade completed
7. attended higher education institution

Based on the above categories, out of the total 9.51 million holders, 6.93 million (72.84%) were illiterate, 1.44 million (15.11%) had attended/completed grades 1 - 3, 0.66 million (6.92 %) had attended/ completed grades 4 - 6, 299.30 thousand (3.15 %) had attended/completed grades 7 - 8, 123.58 thousand (1.30%) had attended/completed grades 9 - 11, and 49.19 thousand (0.52%) had completed grade 12 (refer summary Table H) .

Summary Table H:. Number of Holders by Educational Attainment

Education Status	Total Holders	
	Number('000)	%
Illiterate	6,930.42	72.84
Grades 1 - 3	1,437.63	15.11
Grades 4 - 6	658.23	6.92
Grades 7 - 8	299.30	3.15
Grades 9 - 11	123.58	1.30
12 Grade complete	49.19	0.52
Higher Education	15.56	0.16
Total	9,513.91	100

8. NUMBER OF AGRICULTURAL HOUSEHOLDS, CROPLAND AND AVERAGE CROPLAND BY TYPE OF CROP AND SIZE OF HOLDING

As mentioned earlier, the total number of agricultural households was estimated to be about 9.29 million. Of this total, 8.69 million agricultural households (93.50%) were engaged in the cultivation of temporary crops while about 4.07 (43.77%) million households were engaged in growing permanent crops (see summary Table I) . It should be noted here that agricultural households which were engaged in cultivating both permanent and temporary crops are not exclusive (i.e. households might grow both permanent and temporary crops and could be counted twice). It is also indicated earlier that the average cropland per household was estimated at 0.81 hectare, while the average temporary cropland per household was 0.81 hectare, and the average permanent cropland per household was 0.14 hectare. See the details in Table 8.1.

Summary Table I: Land Under Temporary and Permanent Crops

Items	Number/ Area
Land under Temporary Crops ('000 HA)	7,008.74
Households reporting Temp. Crops ('000)	8,688.65
Land under Permanent Crops ('000 HA)	558.21
Households reporting Perm. Crops ('000)	4,067.33

Appendix I

ESTIMATION PROCEDURES OF TOTAL, RATIO AND SAMPLING ERROR

APPENDIX I

ESTIMATION PROCEDURES OF TOTAL, RATIO AND SAMPLING ERRORS

The following formulas are used to estimate total area of land under specific land use in a given stratum.

$$\hat{A}_h = \sum_{i=1}^{n_h} w_{hi} a_{hi}$$

in which

$$W_{hi} = \frac{N_h M_{hi}}{n_h N_{hi} m_{hi}}$$

is the weight

where h represents the stratum.

n_h is the total number of EAs selected in h^{th} stratum.

N_h is the measure of size of the h^{th} stratum obtained from the sampling frame.

N_{hi} is the measure of size of the i^{th} sample EA in the h^{th} stratum obtained from the sampling frame.

M_{hi} is the total number of agricultural households of the i^{th} sample EA in the h^{th} stratum obtained from households listing of the survey.

m_{hi} is number of sample agricultural households of the i^{th} sample EA in the hth stratum.

a_{hi} is the sample total of area values in the i^{th} EA in the h^{th} stratum for the specific land use.

A_h is estimate of total area under specific land use in the h^{th} stratum.

Moreover, sampling variance of estimate of stratum total of area for a specific land use is estimated by the following formula.

$$Var(\hat{A}_h) = \frac{n_h}{n_h - 1}\left[\sum_{i=1}^{n_h} A^2_{hi} - \frac{\hat{A}^2_h}{n_h}\right]$$

In estimating the sampling variance by the above formula, selection of EAs within a stratum are assumed to be with replacement. By so doing the variance estimate may be slightly over estimated but it greatly simplify the estimation procedure. Further more the finite population correction (fpc) is ignored in the formula. This is due to the fact that its effect is negligible.

Households, holders and members are estimated in the same manner mentioned above.

Some of the survey estimates take the form of a ratio of two variables (For example, average land holding per household). This ratio estimate is given by:-

$$\hat{R} = \frac{\sum \hat{A}_h}{\sum \hat{H}_h} = \frac{\hat{A}}{\hat{H}}$$

where,

$\hat{H}_h$ is estimate of households in the stratum h

The sampling variance of ratio estimate is approximated by:-

$$Var(\hat{R}) = \frac{1}{\hat{H}^2}[Var(\hat{A}) + \hat{R}^2 Var(\hat{H}) - 2\hat{R}Cov(\hat{A},\hat{H})]$$

Coefficient of variation for a total of characteristic A in percent is estimated by:

$$CV(\hat{A}) = \frac{\sqrt{VAr(\hat{A})}}{\hat{A}} x100$$
