19c. Distribution of total income by income group and domestic expenditure	
- Urban	269-270

THE 1995/96 HOUSEHOLD INCOME , CONSUMPTION AND EXPENDITURE SURVEY IN ETHIOPIA

1. Introduction

In recent years, the need for comprehensive economic statistics has been growing rapidly in most developing countries in view of the use of such statistics in formulating socio-economic development plans in general, and to assess the socio-economic situation at the micro level, in particular. Thus, reliable and timely economic statistics data at the household level such as the ones obtained from Household Income, Consumption and Expenditure Surveys, on a regular basis are sources of socio-economic information. These surveys provide valuable data, especially for assessment of the impact of policies on the conditions and levels of living of households.

This is the first volume of a series of reports on the 1995/96 Household Income, Consumption and Expenditure Survey (HICES) conducted on a sample basis throughout the country. In this volume, the principal results of the survey and major tabular reports are presented at rural, urban and country levels. Subsequent volumes will be produced at more dis-aggregated levels. The format of this volume is arranged in such a way as to facilitate easy comparability among the levels, i.e., rural, urban and country levels. To achieve this, tabular reports signifying the same title are designated by the same table number but subscripted by the letters "a", "b" and "c" for country, rural and urban level reports, respectively. For instance, the tabular report "Distribution of Households by Income and Domestic Expenditure Group" is designated by the same table number, i.e., Table 10, thus "10a" is for country, "10b" for rural and "10c" for urban level reports.

Finally, as the major results presented here are only intended as a brief guide to the whole picture, it is obvious that the tabular reports could be enriched by further investigation and in depth analysis. Hence, it is in the belief of the Authority that the result of this survey could serve, among other things, as a valuable tool for taking policy measures at micro level.

2. Objectives of the Survey

It is a well known fact that surveys of Household Income, Consumption and Expenditure (HICES) usually have the major goal of providing basic data needed for policy making purposes as well as other related issues that might arise at the micro level. The major objectives of the Survey were to :

- a. provide data on the levels, distribution and pattern of household income, consumption and expenditure that will be used for analysis of changes in the levels of living-standards of households over time in various socio-economic groups and geographical areas.
- b. obtain information for the formulation of socio-economic plans and policies.
- c. furnish bench mark data for assessing the impact of existing or proposed socio-economic programs on household living conditions.
- d. provide data for compiling household accounts in the system of national accounts, especially in the estimation of private consumption expenditure.
- e. obtain weights and other useful information for the construction of consumer price indices at various levels and for different population groups.

3. Coverage and Content of the Survey

The 1995/96 Household Income, Consumption and Expenditure Survey covered the population in the country on a sample basis excepting the non sedentary population in Afar and Somali Regions. Moreover, residents of collective quarters and homeless persons were not covered in this survey. The survey population constitutes all the eleven administrative regions each of which is composed of rural and urban parts.

A total of 943 Enumeration Areas (EAs) were selected to be covered in each round of the survey in all regions. Nevertheless, 52 and 14 EAs were closed due to various factors beyond the control of the CSA, in the first and second rounds, respectively. Thus the survey succeeded to cover 571 EAs in the rural and 320 EAs in the urban areas were covered in the first rounds, while 606 EAs in the rural and 323 EAs in the urban areas were covered in the second round. In each of the rounds the survey was conducted on the basis of 12 rural and 15 urban households selected in each EA.

In the survey, data were collected on basic population characteristics; consumption of food, drinks and tobacco; expenditure of the household on various consumption and non-consumption items; and household income and receipts. The data collection exercise took into account the two major seasons of the country, i.e., the slack/wet season and the peak/dry (harvest) season. For details on the scope and the content of the survey refer to survey questionnaire in **Appendix I**.

Information on household income, consumption and expenditure was collected from about 23,300 rural and urban household in both rounds. For details refer to **Appendix II**.

4. Concepts and Definitions

i) HOUSEHOLD: A household denotes a group of persons who often live in the same housing unit or in connected premises and have common arrangements for cooking and eating food. A household could consist of a single person, but usually it consists of a husband, his wife, children, relatives, etc.

ii) MEMBER OF HOUSEHOLD: Person constituting a household is called member of the household.

The following are considered as members of a household:-

- a) All persons who lived with the household for at least six months including those who were not with the household at the time of the survey and were expected to be absent from the household for less than six months
- b) All guests and visitors who stayed with the household for six months and above.
- c) House maids, guards, baby-sitters, etc. who lived with the household even for less than six months.

iii) HEAD OF HOUSEHOLD: For the purpose of this survey a head of a household is a person who economically supports or manages the household or for reasons of age or respect, is considered as head by the household or declares himself as such or by members of the household is called head of the household. The head of the household could be a male or a female.

- iv) HOUSEHOLD SIZE : Is the total number of members of a household.
- v) COLLECTIVE QUARTER: A collective quarter is a premise (a housing unit, a building or a compound) in which a number of unrelated persons reside together, and share common facilities. Examples of collective quarters are monasteries, prisons, boarding schools, hostels, home for aged, children's homes, work camps, military barracks, etc. It is important to note that in the premises of some collective quarters, there may be private households.
- vi) URBAN DWELLER'S ASSOCIATION (UDA) (KEBELE): is the lowest administrative unit in an urban center with its own jurisdiction. It is an association of urban dwellers (commonly known as Kebele) formed by the inhabitants, and usually constitutes a part of the urban center.
- vii) URBAN CENTER : is in principle defined as a locality with 2000 or more inhabitants. However for practical purposes an urban center includes the following regardless of the number of inhabitants.
- a) All administrative capitals
 - Regional capitals
 - Zonal capitals not included in (i)
 - Wereda capitals not included in (i) and (ii)
 - Localities with UDAs not included in (i) - (iii)
 - b) Municipal towns not included in (a) above.
 - c) All localities which are not included either in (a) or (b) above having a population of 1000 or more persons, and whose inhabitants are primarily engaged in non-agricultural activities.

viii) FARMER'S ASSOCIATION AREA (FA): is the lowest administrative unit in a settled rural area with its own jurisdiction. It is an association of rural dwellers formed by the inhabitants of a given area whose members are engaged either in agricultural and/or non-agricultural activities.

ix) ENUMERATION AREA (EA): is a unit of land delineated for the purpose of enumerating housing units and population without omission and duplication. An EA in rural areas usually consist of 150 - 200 households, and on the other hand an EA in urban centers constitutes 150-200 housing units. An enumeration area should be related to a UDA or an FA in one of the following ways.

- a) An EA may be equal to or a FA if the number of the households in the FA is less than or equal to 150 - 200, and equal to a UDA in urban areas if the number of housing units in the UDA is 150 - 200.
- b) An EA may be a part of a subdivision or a FA or an urban dwellers association area and should not cross an FA boundary in rural areas and a UDA boundary in urban centers.

x) DOMESTIC EXPENDITURE : is defined as total expenditure incurred by the household or any of its members and includes expenditure on consumption as well as non-consumption items.

The following items are included in the household consumption expenditure :

- Food
- Beverages,
- Cigarettes and tobacco,
- Clothing and footwear
- Housing, water, electricity, gas and other fuels
- Furnishings, household equipment and operation
- Health,
- Education,
- Transport and communication,
- Entertainment, religious and cultural services
- Personal care and effects
- Miscellaneous goods and services

xi) PAYMENTS: In household consumption expenditure surveys payments are defined as all expenditure listed under domestic expenditure plus other expenditures such as remittance paid, bank deposit, interest paid, insurance premia, loans given out, repayment of loans made, pension and other contributions, donations, fines and related legal expenses, income tax, money spent on the purchase of lottery tickets, gambling expenses, "ekub" payment, "edir" contributions, and other payments. In short payment includes all household consumption expenditures and non-consumption expenditures.

xii) INCOME: Household income (some times termed as basic income) is the sum of money income and in kind income and consists of receipts which are of recurring nature and accrue to the household or to individual members of the household regularly (i.e., at annual or at more frequent intervals).

xiii) RECEIPTS: In household consumption expenditure surveys, receipts usually refer to household basic income plus others, such as gifts, loans

received, repayments of loans, lottery prizes, insurance, inheritance obtained, withdrawal from savings, "ekub", etc.

5. Sample Design

It was mentioned earlier that the 1995/96 household income, consumption and expenditure survey was conducted in two rounds. The first round in June and July 1995 and the second round in December 1995 and January 1996. During this period, the country was divided into 11 regions, 69 zones, 616 weredas and 912 urban centers.

For the purpose of sampling, the country was divided into 21 rural and 11 urban domains. The number of enumeration areas (EAs) selected for the survey was 943. However, due to various factors that were beyond the control of the CSA, the survey covered a total of 891 and 929 EAs in the first and second rounds of the survey, respectively. The number of sample EAs in each domain was determined by taking into account the minimum number of EAs required to get reasonable estimate and cost.

In rural areas, the small and medium-sized regions, i.e., Tigray, Afar, Somali, Benishangul-Gumuz, Gambella, Harari, Addis Ababa and Dire Dawa were each treated as a domain (reporting level). However, in the large regions, i.e., Amhara, Oromiya and Southern Nations, Nationalities and Peoples Regions, reporting levels were formed from 2 to 4 contiguous zones and each group of zone was treated as a domain (see Table A). In these regions, the number of sample EAs allocated to each region was reallocated to zones in proportion to their sizes, size being the total number of households of the zones obtained from the 1994 Population and Housing Census map work. In rural domains, a two-stage sample design was used for sample selection,

EAs and households being the primary and ultimate sampling units, respectively.

In the urban case, the urban centers were divided into two groups:-

Group I: Ten major urban centers

Group II: Other urban centers

In Group I, there are ten urban centers, namely, Mekele, Bahir Dar, Gonder, Desie, Jima, Debre Zeit, Nazareth, Harar, Dire Dawa and Addis Ababa. Each of these urban centers were treated as domains. Moreover, 15 EAs were sampled from each domain. But, in Nazareth, Addis Ababa and Dire Dawa 20, 75 and 20 EAs, were allocated to each domain. The sample EAs were reallocated to Keftegas/Weredas in proportion to their sizes, size being the total number of households of the Keftegas/Weredas. In these domains EAs and households served as primary and ultimate sampling units, respectively.

In Group II urban centers, 103 EAs were sampled and a three stage stratified sample design was used for sample selection. Here urban centers, EAs and households served as primary, secondary and ultimate sampling units, in that order. An urban center was selected with probability proportional to size in its respective region, size being the total number of households according to the 1994 Population and Housing Census Map work.

Sample selection of EAs in all domains was carried out with probability proportional to size (size being as described above). In each selected EA, a fresh list of households was prepared during the field work and 15 households were selected from each sampled urban EA and 12 households from each sampled rural EA using systematic sampling technique.

Summary Table A: List of Domains by Rural and Urban Areas

Serial Number	Area	Domain
Rural		
1		Tigray
2		Afar
3		North and South Gonder
4		East, West Gojam and Agewawi
5		North Welo and Wag Hamra
6		South Welo, Oromiya and North Shoa
7		East and West Welega
8		Ilubabor and Jima
9		North and West Shoa
10		East Shoa, Arsi, Bale and Borena
11		East and West Harerge
12		Somali
13		Benishangul-Gumuz
14		Yem, Keficho, Maji, Shekicho and Bench
15		North and South Omo, Derashe and Konso
16		Hadiya, Kembata and Gurage
17		Sidama, Gedeo, Burji and Amaro
18		Gambela
19		Harari
20		Addis Ababa
21		Dire Dawa
Urban		
1		Mekele
2		Bahr Dar
3		Gonder
4		Desie
5		Jima
6		Debre Zeit
7		Nazareth
8		Harar
9		Dire Dawa
10		Addis Ababa
11		Other Urban Centers

Estimation procedure of totals, ratios, sample error and the measurement of precision of expenditure and payment of households are given in **Append III and IV**.

6. Data Collection

Data were collected from 12 households in each rural sample EA and 15 households from each urban sample EA. The interview method and objective measurement of household consumption items were utilized throughout the survey period.

In rural areas data were collected in such a way that the 12 households selected from each rural enumeration area were grouped into two, each group consisting of six households to be interviewed over a period of four weeks and the remaining six households again over a period of the next four weeks. The enumerator visited two households daily so that each household is interviewed twice a week and eight times during the one month period in each round.

In the urban case, the 15 households were also grouped into two and seven households were interviewed during the first four weeks while the remaining eight households were interviewed the following four weeks. The work load distribution of the enumerators in the urban case was to interview a maximum of three households per day. As in the rural case, here too, each sample household was interviewed twice weekly, i.e., eight times monthly in each round. It is believed that the relatively frequent visit made by the enumerator to each household was essential to control the errors arising from memory lapse which is common in household surveys of this nature.

Different reference periods were used to collect information on consumption expenditures of food, drinks and tobacco, and other consumption and non-consumption items such as durable and non-durable household items, as shown in Summary Table B.

Summary Table B : The Different Reference Periods Used for Data Collection in the 1995/96 HICES

Consumption/Expenditure on	Reference Periods Used for Data Collection
Food, drinks and tobacco	Twice weekly (3-4 days)
Clothing and footwear	One month and six months
fuel, power, house rent and repairs	One week and six months
Household equipment and operation	One month and six months
Medical care, and education	One week and six months
Transport and communication	One week and six months
Recreation entertainment and services	One week and six months
Personal care and personal effects	One week and six months
All other items including non-consumption expenditure	One week and six months

6.1. Pilot Study, Training and Field Work

The survey, which has been conducted in rural and urban areas simultaneously, was one of the huge undertakings launched by the Central Statistical Authority (CSA). Thus, it was felt from its very inception that a pilot study should be conducted in order to test the survey instruments, the reaction of respondents and the different technical, administrative and logistics requirements of the main survey.

To this end, a pilot study has been conducted in Addis Ababa and in some rural enumeration areas of Oromiya for a period of one month (15 March 1995 to 14 April 1995). A total of fifteen enumeration areas, ten in Addis Ababa and five in the mentioned rural areas were covered by the pilot study. Some 100 rural and urban households were interviewed in this test. In general, this exercise enabled the Authority to make some important improvements to the final survey document and to assess and allocate the necessary technical as well as administrative and logistics support needed for the survey.

The next step after the pilot study was the training of the field staff for the main survey, which was carried out in two phases. During the first phase, training on the survey instruments, i.e., survey questionnaires, instruction manual, etc., was given for about 70 professional and sub-professional staff at the Head Office. The first phase of the training lasted for ten days. These staff served as trainers of enumerators and supervisors. The second phase of the training was conducted in 14 Branch Statistical Offices. It involved the training of about 1000 enumerators and 200 field supervisors and this training lasted for about 20 days.

The field work of the first round Household Income, Consumption and Expenditure Survey started on the 11th of June 1995 and covered some 606 rural and 323 urban enumeration areas. The first round data collection was completed during the first week of August, 1995.

The field work of the second round of this survey was carried out in December 1995 and January 1996 and covered more or less those same enumeration sites and households both in rural and urban areas.

6.2. Field Supervision

In surveys of this kind, regular supervision is a compulsory component of the whole process. Thus, the field supervision activity of the 1995/96 HICES was launched right after the first round data collection was started. The supervision was designed in such a way as to closely monitor the data collection activities, facilitate the enumeration process and ensure that the data collection takes place according to the instruction. In addition to this, regular supervision activities throughout the two-round survey periods, coordinators in most cases professionals, equipped with a thorough understanding of the subject matter, have closely observed the quality of data collection on the spot even during the interview period. Furthermore, a team of experts from the Head Office have visited all Branch Statistical Offices and some urban and rural enumeration areas to get a first hand impression of the whole activity of the field work. Thus, despite the limited number of field vehicles involved in the data collection and supervision activities, it is important to state that, the field operation of the 1995/96 HICES was successfully completed.

7. Data Processing

Due to the complex nature and magnitude of the survey, CSA has given special attention to the data processing activity. Thus, a taskforce comprising of subject matter specialists and data processing experts was formed to oversee the data processing and analysis activities of the HICES starting from August 1995. After the completion of the first round data collection and the filled-out questionnaires were returned from the field, the taskforce embarked on the first stage of data processing activity, i.e., manual editing, coding and verification. With the utilization of experienced editor-coders and verifiers, the editing, coding and verification of the questionnaires have taken the most part of the three months after which data entry was started.

For the data entry activity, the Integrated Microcomputer Processing System (IMPS) software was used throughout. To speed up this process, experienced data entry operators (those who served in the 1994 Population and Housing Census data entry operation) were used and the data entry activity was completed in December 1995. The survey data collected during the second round (December 1995/ January 1996) have also passed through all the data processing activities stated above for the first round.

After the data entry of both rounds has been completed, the next step in the data processing activity was to merge these data. It should be stated here that the merging of the two rounds data was a difficult and challenging task. However, with the help of a short consultancy services provided by Statistics Norway, the merging was successfully completed in May 1996, after which data cleaning, detailed and thorough consistency checking were done. In fact, the data cleaning and the consistency checking, which were important for the generation of the final tabular reports, were done both manually and by computer.

The whole data set was thoroughly cleaned and the consistency checking were completed slightly behind schedule due to unforeseen problems encountered during the production of the tabular reports. At this point it should be clear that all tabular reports presented here are based on the merged and weighted data of both rounds and are also annual figures.

8. SUMMARY OF MAJOR FINDINGS

8.1. POPULATION ESTIMATES AND BASIC CHARACTERISTICS

a. Population Estimates:

According to the survey result, the total population of the country during the survey period stood at 56,927,498 of which the rural and urban population estimates are 48,316,930 and 8,610,564, respectively (See Tables 1a, 1b and 1c). Note that these estimates particularly refer to the second round data collection period, i.e., December 1995/January 1996.

b. Household Size:

Tables 1a, 1b and 1c show the distribution of households and members by age, sex and household size at country, rural and urban levels. According to the survey result, the average household size for the rural population is 5.26, while that of urban population is 5.25.

At the country level, the survey result shows that the average household size for Ethiopia is 5.26 with the most common households being five-member households followed by four, three and six-member households, all of these

accounting for 61.25 percent of the entire households in the country. The one and ten-person and above households accounted for 2.39 percent and 4.54 percent, in that order, of the total households in the country (See Table 1a).

In rural Ethiopia, the data on the distribution of the household sizes indicate that the most common household size is found out to be a five-member household and is followed by four, three and six-member households, in that order, accounting for 62.2 percent of the total rural households. The two extremes, i.e., one and ten-person and above households, in rural Ethiopia, stood at 1.96 percent and 4.13 percent, in that order (See Table 1b).

In urban Ethiopia, the most common household sizes are five, four, three and six-member households, accounting for 56.0 percent of all urban households, while one and ten-person and above households accounted for 4.8 percent and 6.84 percent, respectively, of the total urban households (See Table 1c).

c. Age and Sex Composition:

Tables 1a, 1b and 1c also show the age and sex composition of the survey population for country, rural, and urban levels.

At the country level, 47.5 percent and 49.2 percent of the population fall under age 15 and 15 to 64 years, respectively, while 3.3 percent are aged 65 years and over. The country level dependency ratio is 103, implying in Ethiopia every 100 persons in the productive age has to support 103 persons for their livelihood.

Of the total rural population, 48.5 percent fall below 15 years of age while 48.2 percent accounted for the productive age, i.e., lie between 15 years and 64 years of age, and 3.3 percent are aged 65 years and above (See also Summary Table C). This shows that the dependency ratio, i.e., the ratio of the

sum of the old and the young ages to that of the productive age, is about 107. This implies that every 100 person in the productive age has to support 107 dependents in rural Ethiopia.

**Summary Table C : Percentage Age Distribution of the Population
by Sex 1995/96 HICES**

Age Group	PERCENTAGE DISTRIBUTION OF POPULATION BY SEX		
	Male	Female	Both Sexes
00-09	33.6	32.7	33.1
10-14	14.9	13.9	14.4
15-19	11.3	11.0	11.1
20-24	7.6	7.8	7.7
25-29	6.4	7.2	6.8
30-34	4.4	5.4	5.0
35-39	4.4	5.8	5.1
40-44	3.6	4.0	3.8
45-49	3.6	3.0	3.3
50-54	2.2	2.6	2.5
55-59	2.2	1.8	2.0
60-64	2.0	2.0	1.9
65 +	3.6	3.0	3.3
TOTAL	100	100	100.0

In urban Ethiopia, 41.7 percent and 54.9 percent, of the population fall under 15 years of age and between 15 and 64 years of age, respectively, while 3.4 percent are aged 65 years and over. The dependency ratio stands

at 82, that is, every 100 person in the productive age in urban areas has to support 82 dependents. This from the outset shows the difference in the profile of the living conditions of the urban and rural population in this country.

8.2. THE LEVEL AND PATTERN OF INCOME, CONSUMPTION AND EXPENDITURE OF THE POPULATION

In surveys of this kind, the income statistics reported by households usually tends to under estimate the actual income level of households due to various reasons. As a result, a number of countries usually take household expenditure as a proxy of income. Despite this fact, income statistics presented in the analysis of the survey result. Tables 2a, 2b and 2c depict the distribution of households by domestic expenditure groups at country, rural and urban levels.

At the country level, households spending below 2,000 Birr annually (or less than 170 Birr monthly) are about 12.6 percent of the total households in the country, while the top 4.8 percent spend 12,600 Birr or more per household annually, i.e., more than 1,000 Birr per household monthly. The remaining 83.6 percent spend between 2,000 and 12,599 Birr per annum. However, the bulk of the population, about 68.5 percent of the households, spend less than 5,400 Birr per year (about 450 Birr per month) per household.

In rural Ethiopia, households spending below 2,000 Birr per annum (or less than about 170 Birr monthly) are 13.1 percent of all rural households, while the top 3.6 percent spend 12,600 Birr or more annually (or more than 1,000 Birr monthly). The remaining, 83.3 percent spend between 2,000 and 12,599 Birr per annum. It can also be seen from these tables that

(71.4 percent) of the rural households spend less than 5,400 Birr per year (about 450 Birr per month) per household.

In urban Ethiopia, households spending below 2,000 Birr annually (or less than 170 Birr per household monthly) account for about 7.8 percent of all urban households while the top 18.2 percent spend 12,600 Birr or more per household annually (more than 1,000 Birr monthly). The remaining 74.0 percent spend between 2,000 and 12,599 Birr. One can observe the difference in spending patterns among rural and urban households. Out of the total urban households, about 43.6 percent spend less than 5,400 Birr per year per household (about 450 Birr per household monthly).

SUMMARY TABLE D: PERCENTAGE DISTRIBUTION OF HOUSEHOLDS BY EXPENDITURE AND INCOME CATEGORIES AT COUNTRY, RURAL AND URBAN LEVELS.

HOUSEHOLD BY PLACE OF RESIDENCE	EXPENDITURE IN BIRR PER HOUSEHOLD PER ANNUM			INCOME IN BIRR PER HOUSEHOLD PER ANNUM		
	Less than 2,000	2,000-12,599	12,600 or more	Less than 2,000	2,000-12,599	12,600 or more
Country	12.6	82.6	4.8	21.1	72.9	6.0
Rural	13.1	83.3	3.6	20.8	74.6	4.6
Urban	7.8	74.0	18.2	23.1	63.4	13.5

If one compares the distribution of expenditure with that of the distribution of income, first at the country level, from Tables 6a, 6b and 6c, the following results are readily apparent.

In Table 6a one can see that slightly more than a fifth (21.1 percent) of all households in the country earn less than 2,000 Birr per household per annum and the top 6.0 percent of the households earn 12,600 Birr or more per household annually. The remaining 72.9 percent earn between 2,000 and 12,599 Birr. The Table also shows the majority of the population, that is, 71.7 percent of all households earn less than 5,400 Birr annually. It is evident that both patterns showed more or less equitable distributions. Thus, in spite of expected underestimation of income, by households, one can conclude that for all practical purposes the two distributions, i.e., expenditure and income, showed similar patterns. The distributions of household payment and receipt also support this result. For details, see Tables 4a, 4b and 4c and Tables 8a, 8b and 8c.

The spending and income patterns of households can also be compared at rural and urban levels as shown in Summary Tables D and E. In rural Ethiopia, the result shows that 20.8 percent of all rural households earn less than 2,000 Birr annually while only the top 4.6 percent of rural households earn 12,600 Birr or more annually (or more than 1,000 Birr per household monthly). The rest, i.e., 74.6 percent earn between 2,000 and 12,599 Birr per annum. The majority of the rural household population, 73.6 percent, earn on the average below 5,400 Birr annually. For details, the reader is referred to Table 6b (Rural).

It can also be seen from this table that in rural Ethiopia the distribution of the female population is higher than that of male in lower income groups especially up to an annual income of 2,000 Birr while in middle and higher income groups the reverse is true. If one compares these figures with that obtained from the expenditure side, one can see that they are more or less similar without forgetting the under reporting of income by households during

data collection. Furthermore, these results can be confirmed from the household payment and receipt distributions from Tables 4b and 8b.

In urban Ethiopia, the table shows that 23.1 percent of all urban households earn less than 2,000 Birr annually while the top 13.5 percent of urban households earn 12,600 Birr or more annually (more than 1,000 Birr per household monthly). The remaining 63.4 percent earn between 2,000 and 12,599 Birr per year. On the other hand, the majority of urban households, 60.9 percent, earn on the average an annual income of less than 5,400 Birr (or a monthly income of less than 450 Birr) per household.

SUMMARY TABLE E: PERCENTAGE DISTRIBUTION OF HOUSEHOLDS BY PAYMENT AND RECEIPT CATEGORIES AT COUNTRY, RURAL AND URBAN LEVELS.

HOUSEHOLD BY PLACE OF RESIDENCE	PAYMENT IN BIRR PER HOUSEHOLD PER ANNUM			RECEIPT IN BIRR PER HOUSEHOLD PER ANNUM		
	Less than 2,000	2,000-12,599	12,600 or more	Less than 2,000	2,000-12,599	12,600 or More
Country	11.2	81.8	7.0	18.6	74.5	6.9
Rural	11.8	83.2	5.0	18.6	75.9	5.5
Urban	7.8	74.0	18.2	18.6	66.1	15.3

To conclude this section, it is clear from the above Summary Tables that expenditure and income are more or less similarly distributed among expenditure/income groups, though both are slightly skewed to the left. One can also observe that the skewness is relatively sharper in the income case. (For details see Table 6c). This is also supported by the distribution of household payment and receipt of Tables 4c and 8c.

However, the above major findings should also be supported by the cross classifications of income, receipt, expenditure and payment. These information are obtained from the distribution of households by income and domestic expenditure group (Tables 10a, 10b and 10c), distribution of households by receipt and payment group (Tables 11a, 11b and 11c), distribution of income of the households by income and expenditure group (Tables 15a, 15b and 15c), distribution of receipt of the household by receipt and payment group (Tables 16a, 16b and 16c) and average expenditure (all payments) by income group. Thus, for subsequent discussions the reader is referred to these Tables. At this stage, however, it is important to describe the concept behind each of these tables before moving to the analysis part.

Tables 10a, 10b and 10c (for rural, urban and country levels) show households who spent what they earned (the non-savings group) as well as households who spent more than their earnings (the dis-savings group) and households who spent less than their earnings (the savings group). Tables 11a, 11b and 11c reveal similar information, but from the receipt and payment side (i.e., households who paid the same, those who paid less or those who paid more than their receipts).

Tables 15a, 15b and 15c show the share of income earned out of the total income for the households described in Tables 10a, 10b and 10c (i.e., households who spent equal to, those who spent less or those who spent more than their earnings). From Tables 16a, 16b and 16c the share of receipt of these households out of the total receipt can be observed for the household types mentioned in Tables 11a, 11b and 11c.

At the *country level* (Table 10a), households who spent what they earned are 29.1 percent of the total households. While those who spent less and more than their earnings amounted to 21.6 percent and 49.2 percent, respectively. The corresponding percentages from the receipt and payment cross-classification (Table 11a) are found out to be 31.4 percent, 20.1 percent, 48.5 percent, respectively, for the three types of households referred to above. The share of income for these households at the country level is found out to be (Table 15a) 32.3 percent, 37.0 percent and 30.6 percent, of the total household income and from the receipt and payment side the share stood at 41 percent 28.5 percent and 30.4 percent (Table 16a).

At the *rural level*, from Table 10b it is found out that 30.6 percent of the households spent what they earned, while 21.8 percent spent less than their earning. On the other hand, 47.6 percent of the households spent more than their earnings. The analogous percentages from the receipts and payment sides (Table 11b) are 32.7 percent, 20.7 percent and 46.6 percent for the non-saving, saving and dis-saving groups of households, in that order. For these types of households, the share of income out of the total income from Table 16b is, 32.0 percent, 35.8 percent and 32.3 percent, while their share of receipt out of the total household receipt (Table 16b) stood at 36.3 percent, 31.5 percent and 32.2 percent, respectively.

At the *urban level* (refer to Table 10c), those households who spent all their earnings are 20.7 percent of the total urban households, while households who spent less than their earning and those who spent more than their earnings stood at 11.4 percent and 67.9 percent, in that order. From the receipt and payment sides (Table 11c), these percentages are 29.11 percent, 21.6 percent and 49.2 percent for the households under consideration, while their share of income out of the total household income (Table 15c) is 33.6 percent, 41.7 percent and 24.8 percent, respectively, for the group of

households who spent the same, those who spent less or those who spent more than their earnings. On the other hand, Table 16c, reveal that the share of receipt out of the total receipts of urban households is 55.1 percent, 19.6 percent and 25.3 percent for the households who paid the same, those who paid less or those who paid more than their receipts.

It can be seen from the above discussion that the proportion of the dis-saving group of households when examined from the income side seem to be consistently greater than the proportion of the saving and non-saving groups. This can be explained in two ways. The first possible explanation is that households who spent more than their earnings might have drawn the "extra" income from their past savings (which could never be reported in this survey). The other logical explanation for the high proportion of the dis-savings group is that these households might have drawn the difference from borrowing on the expectation that their future income will increase to cover the excess expenditure from various sources.

Finally, one should not forget that in surveys of this kind income is usually under reported. If the reader is inclined to be convinced by the latter argument, it can be clearly seen from the above percentages that urban households seem to hide their income when compared to rural households. In any case, the result indicates at this stage is that the distributions are, more or less, equitable with a slight hint of under estimation observed from the income side.

8.2.1. The Status of Expenditure Per Capita and Source of Income

Table 12a, 12b and 12c show the average expenditure (all payments) by expenditure group. These tables, among other things, show the average household expenditure and per capita expenditure by expenditure types and at country, rural and urban levels.

From these tables, the major result is that **annual average** expenditure **per person** in the country is Birr 933 at 1995/96 prices. For the two levels, i.e., rural and urban population, the per capita expenditure is Birr 887 and Birr 1190, respectively, at 1995/96 prices. On the other hand, the annual per capita receipts/payments were Birr 1,004 at country level, Birr 887 for rural population, and Birr 1,692 for Urban Ethiopia. (Tables 14a, 14b and 14c).

At the country level, basic income account for 93.0 percent of total household receipts (Table 14a). Out of the total household receipt 52.9 percent is obtained from agriculture and related activities while 17.2 percent is from non-agricultural enterprises. The receipt from wages and salaries at the country level is 6.9 percent of total household receipt. Thus, these three major source of household receipts account for 77.0 percent of the total household receipts. Remittances and other transfer incomes have a share of some 13.8 percent out of the total receipt.

For rural households basic income takes the entire share, i.e., 100 percent, of household total receipts out of which 69.5 percent is purely from agriculture, while 6.9 percent is from other non-agricultural activities. Wages and salaries in rural areas contribute only 2.5 percent to the total receipts of rural households. Thus, these three major sources of household receipts account for about four-fifths of the total household receipts. Remittances and

other transfer incomes amounted to 14.8 percent of total receipts of rural households.

The picture is different in the case of urban households. Here, basic income amounted to 70.0 percent of the total household receipts. The major source of receipts in the urban case is the receipt from non-agricultural activities and have a share of 47.4 percent out of the total receipts of urban households, while 19.7 percent is from wages and salaries. Only 4.2 percent of the total receipts of urban households are acquired through agricultural and related activities. These three sources in the urban case contribute 71.3 percent to the total receipts of urban households. Remittances and other transfer incomes amounted to 10.8 percent of the total receipts.

8.2.2. The Level and Pattern of Household Expenditure

Table 12a, 12b and 12c also show additional information on the level and pattern of household expenditure.

At the country level, 50.1 percent of total household income is spent on food which is followed by house rent, energy, water and construction materials, 15.7 percent; household non-consumption expenditure, 9.0 percent; clothing and footwear, 7.9 percent; miscellaneous goods and services, 6.5 percent; furniture, furnishings, household equipment and operation, 5.4 percent; transport and communication, 1.8 percent; personal care and effects, 1.2 percent; medical care and health, 1.0 percent; recreation entertainment and education, 0.5 percent; cigarettes and tobacco, 0.4 percent; and beverages, 0.4 percent.

In rural Ethiopia, 52.4 percent of the total household income is spent on food, followed by rent, energy, water and construction materials which

amounted to 15.2 percent; household non-consumption expenses amounted to 8.1 percent; clothing and footwear, 8.0 percent; miscellaneous goods and services, 6.5 percent; household equipment and operation, 5.5 percent; personal care and effects, 1.2 percent; and transport and communication, 1.1 percent. The expenditure on medical care and health, beverages, cigarettes and tobacco; and recreation, entertainment and education, was only 0.9 percent, 0.4 percent, 0.4 percent and 0.3 percent, of total rural household income, respectively.

In urban Ethiopia, 40.9 percent of the total income of households goes to food. This is followed by expenses on rent, energy, water and construction materials, 17.5 percent; household non-consumption expenditure, 12.9 percent; clothing and footwear, 7.8 percent; miscellaneous goods and services, 6.4 percent; furniture, furnishings, household equipment and operation, 4.8 percent; transport and communication, 4.7 percent; recreation, entertainment and education, 1.5 percent; medical care and health, 1.4 percent; personal care and effects, 1.4 percent; cigarettes and tobacco and beverages, each take 0.4 percent of total urban household income.

Further, analyzing the important results presented by Tables 12a, 12b and 12c, it would be of help to see the proportion of income spent on food across each income/ expenditure groups. For details the reader is referred to these tables.

It can be clearly observed from these tables that with the exception of a slight deviation in one or two income groups, the proportion of income spent on food more or less tends to decline as income increases. This is true for country as well as rural and urban households though the rate of decline slightly differ between these levels as shown in Summary Table F.

To sum up the discussion, again, the expenditure pattern across expenditure/income groups in tables 12a, 12b and 12c, one can see that at the country level, household expenditure consistently exceeds income (the dis-savings group) up to the income group 4,200 - 5,399. Thereafter, as income increases the average propensity to consume declines while the average propensity to save recovers to increase between 3.7 percent and 37.9 percent.

Summary Table F : Percentage Distribution of Income Spent on Food by Income Group at Country, Rural and Urban Levels.

Income group in Birr	Percentage of Income Spent on Food		
	Country	Rural	Urban
Below 600	61.6	67.1	53.4
600-999	58.5	61.0	51.6
1000-1399	56.2	58.5	48.5
1400-1999	59.4	60.7	51.7
2000-2599	57.8	58.8	51.1
2600-3399	57.7	58.8	50.3
3400-4199	51.0	51.8	44.2
4200-5399	55.4	57.6	44.0
5400-6599	55.0	57.2	45.5
6600-8999	50.7	53.2	40.1
9000-12599	48.6	51.4	39.5
12600-16199	43.6	45.1	37.5
16200-19999	38.3	43.4	30.2
20000 +	17.9	11.9	27.3
Total	50.1	52.4	40.9

Considering rural households, Table 12b shows that the rural household expenditure exceeds income up to the income group 3,400 - 4,199 Birr. However, starting from the income group 4,200 - 5,399 Birr income exceeds expenditure showing an increment of the average propensity to save between 0.6 percent and 40.1 percent while the average propensity to consume declines.

For urban households, household expenditure continues to exceed income up to the income group 3,400 - 4,199 Birr. Thereafter, the average propensity to consume kept on declining while the average propensity to save increased between 0.3 percent and 48.3 percent of total household income.

8.2.3. The Saving Status of Households

It is important to throw some light on the status and nature of the investment capacity of Ethiopian households at rural and urban levels based on the survey result. The savings component in surveys of this nature is usually estimated from the income/expenditure categories of such items as bank deposit, loans given/repaid, "Ekub", other investments, ...etc.

At the country level, out of the total expenditure/income, the expenditure/income for the above items could be obtained from detailed item level classification of Table 12a, 12b and 12c and according to the result at the country level, Ethiopian households save some 6.6 percent of their total earnings. In rural Ethiopia, households save 5.9 percent of their total earnings, while the saving component for urban households is 9.5 percent of total earnings.

8.2.4. The Per Capita Daily Food Calorie Intake

To conclude the major findings of the survey, a few points on the food calorie intake of the population will be in order.

The calorie intake result is calculated by using the standard table "FAO: Food composition table for use in Africa, 1968" in conjunction with "ENI: Expanded food composition table for use in Ethiopia, 1968" and the survey data given in Tables 13a 13b and 13c.

Thus, the country level total calorie intake per individual per day is about 2,100 as obtained from the survey result. It can be seen from the above table that out of this daily calorie intake cereals have the major, 69.1 percent, followed by potatoes and other tubers and stems, 11.4 percent, and pulses, 7.6 percent. Milk, cheese and eggs account for 4.3 percent of the total daily calorie intake of an individual. While fruits and vegetables, coffee and tea, and spices take a share of, 1.9 percent, 1.4 percent and 1.1 percent, in that order. On the other hand, the daily calorie intake of meat is only 0.45 percent and that of fish 0.02%, of the total daily intake.

However, the rural per capita daily calorie intake was found out to be 2,256 mainly divided among cereals, 69.6 percent, potatoes, 12.1 percent, pulses, 7.5, percent, milk, cheese and eggs for 4.31 percent, fruits and vegetables, 1.9 percent. The remaining small percentage goes to coffee and tea, spices, bread, oils and fat, etc.

**SUMMARY TABLE G : DAILY PER PERSON CALORIE INTAKE BY
FOOD GROUP AT COUNTRY, RURAL AND URBAN LEVELS**

Food Group	Country Level calorie per person per day	Rural calorie per person per day	Urban calorie per person per day
Cereals, Un-milled	372.57	418.9	112.59
Cereals, Milled	1079.34	1150.58	679.55
Pulses, Un-milled	78.59	87.77	27.1
Pulses, Milled,	81.00	82.37	73.29
Oil Seeds	7.65	8.66	1.95
Pasta Products	1.00	0.55	3.57
Bread and Others	21.49	8.47	94.60
Meat	9.50	7.10	22.97
Fish	0.35	0.39	0.10
Milk, Cheese and Eggs	90.28	97.29	50.99
Oils and Fats	11.86	9.24	26.61
Vegetables	38.21	40.44	25.69
Fruits	2.41	2.42	2.33
Spices	23.95	24.73	19.54
Potatoes	239.36	272.71	52.21
Coffee, Tea	28.99	31.45	15.19
Other Food Items	13.67	13.56	14.25
TOTAL	2099.83	2256.12	1222.54

At the urban level, the per capita daily calorie intake as obtained from the survey is about 1,223. It can be derived from the Summary Table G that here too, 64.8 percent of the total calorie goes to cereals, followed by pulses, 8.21 percent, bread and others, 7.74 percent, potatoes, 4.27 percent, milk,

cheese and eggs, 4.17 percent, fruits and vegetables, 2.29 percent, oils and fat, 2.18 percent, and meat, 1.88 percent. The rest is divided among spices, coffee and tea, other food items, etc.

It can be seen from the above table that the rural calorie intake exceeds that of the urban. This can be explained by the fact that meals taken out of home is an important component of urban household consumption, the quantity of which could not be measured in this survey. Therefore, until further investigation is made on this finding, the reader is advised to keep this point in mind while using the result of the urban calorie intake.

Table 1a: Distribution of households and members by age, sex, and household size - Country Level

Household size	Households No. %		Sex	A G E G R O U P (YEAR)													
				0 - 9		10 - 14		15 - 19		20 - 24		25 - 29		30 - 34		35 - 39	
				No.	%	No.	%	No.	%	No.	%	No.	%	No.	%	No.	%

Estimator of Total

The estimate of total at a given reporting level (rural or urban part of the country) is given by:

$$t = \sum_{h=1}^H t_h$$

Appendix III

(Estimation Procedure of Total, Ratio and Sampling Error)

Where:

t_h - Estimate of total for rural or urban part of region r

N_h - Measure of size of stratum h from the sampling frame

N_{hi} - Measure of size of the i -th EA of stratum h from the sampling frame

R_{hi} - Total households of the i -th EA in stratum h from the survey listing

n_{hi} - Households sampled and successfully covered in the i -th EA of stratum h

n_h - Number of EA sampled and covered successfully in stratum h

x_{hij} - Observed value of characteristic x from household j in the i -th EA of stratum h

ESTIMATION PROCEDURE OF TOTAL, RATIO AND SAMPLING ERRORS

Estimator of Total

The estimate of total at a given reporting level (rural or urban part of the country) is given by:

$$\hat{Y} = \sum_{r=1}^R \hat{Y}_r \quad \text{and}$$

$$\hat{Y}_r = \sum_{h=1}^H \sum_{i=1}^{n_h} \hat{Y}_{hi} = \sum_{h=1}^H \sum_{i=1}^{n_h} \left[\frac{M_h}{n_h M_{hi}} \frac{H_{hi}}{h_{hi}} \sum_{j=1}^{h_{hi}} y_{hij} \right]$$

Where:

\hat{Y}_r = Estimate of total for rural or urban part of region r

M_h = Measure of size of stratum h from the sampling frame

M_{hi} = Measure of size of the i-th EA of stratum h from the sampling frame

H_{hi} = Total households of the i-th EA in stratum h from the survey listing

h_{hi} = Households sampled and successfully covered in the i-th EA of stratum h

n_h = Number of EAs sampled and covered successfully in stratum h

x_{hij} = Observed value of characteristic x from household j in the i-th EA of stratum h

Estimator of variance of Total Estimate

Estimate of the variance of a total estimate is given by:

$$V(Y) = \sum_{r=1}^R V(\hat{Y}_r)$$

$$V(\hat{Y}_r) = \frac{n_h}{(n_h - 1)} \left[\sum_{i=1}^{n_h} (\hat{Y}_{hi}^2 - \frac{\hat{Y}_h^2}{n_h}) \right]$$

Coefficient of Variation of Total Estimate

$$CV(\hat{Y}) = \sqrt{\text{Var}(\hat{Y})}$$

Ninety five Percent Confidence Interval of Total Estimate

$$\hat{Y} \pm 1.96 \sqrt{V(\hat{Y})}$$

Design Effect of Total Estimate

$$DEFF = \frac{V(\hat{Y})}{V_r(\hat{Y})}$$

Where $V_r(\hat{Y})$ is variance of the total estimate under simple random sampling with ultimate sample size of the actual sample design.

The estimate of a ratio R of y to x at a given reporting level (rural or urban) is:

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

Where \hat{Y} = Estimate of total of characteristic y

\hat{X} = Estimate of total of characteristic x

Sampling variance of ratio estimate, \hat{R} , is:

$$V(\hat{R}) = \frac{1}{\hat{X}^2} [V(\hat{Y}) + \hat{R}^2 V(\hat{X}) - 2\hat{R} \times \text{Cov}(\hat{X}, \hat{Y})]$$

Where

$$\text{Cov}(\hat{X}, \hat{Y}) = \frac{n_h}{n_h - 1} \left[\sum_{h=1}^{n_h} (\hat{X}_{hi} \hat{Y}_{hi} - \frac{\hat{X}_h \hat{Y}_h}{n_h}) \right]$$

Coefficient of Variation (CV), Confidence Interval (CI) and Design Effect (DEFF) for the ratio estimate \hat{R} , are estimated analogously using the formula defined for the total estimate.

APPENDIX III OF REPORT NO. 100-100-100
