Introduction

International trade is a major global operation which has assumed great importance economically and politically over the years. From its inception, trade between countries has been important due to at least three reasons. 1) every country lacks some vital resources that it can get only by trading with others; 2) differences in each country's climate, labor force and other endowments make it a relatively efficient producer of some goods than others and 3) specialization permits larger outputs and can therefore offer economies of large scale production.

Thus, the availability of reliable and up-to-date statistics of international trade becomes important to assess the economic, financial and budgetary policy of a country and in the designing implementation and evaluation of trade and finance agreements between countries and organizations. In the field of statistics itself, international trade statistics have been indispensable in the compilation of national accounts and balance of payments statistics.

In view of this and the overall responsibility of the Central Statistical Authority (CSA) to provide statistical reference in all fields of statistics, the Authority found it imperative to publish data pertaining to Ethiopia's foreign trade. The items included are exports and imports of commodities by type, volume, value,direction of trade and end-use.

In this publication classification of commodities covered follow the Standard International Trade Classification (SITC REV. 2). Ethiopia's foreign trade statistics adopt the General Trade system in the collection of merchandise trade data, i.e., all goods that cross in the boundaries of the country for domestic consumption or for re-export are included under import.

Domestically produced goods and commodities of import which are exported after being transformed, improved or repaired are included in export. Re-export commodities are ones which leave the country in the same state as when they enter.

Another concept which needs elaboration is unit value. A closer look at the detailed tables of value and quantity of imports and exports by commodity and trading partner reveals that the commodities described rarely refer to homogeneous products. It would be unlikely for a more detailed classification in respect of any of those items to be formed for purposes of international trade. Yet each of them can be divided into a number of different species varying in size, quality, taste and price. In the circumstance, therefore, it is expedient when attempting to derive prices from quantities and value of commodities as reported in international trade statistics to resort to unit value (UV = Value/Quantity). It is possible to quote the price per unit of a specific variety of the item. However, in respect of the item in general it is proper only to refer to an average price, that is, a unit value.

Review of Merchandise Trade

A. General

The summary table, Table 1 presents the annual values of exports, re-exports and imports for the years 1981-1990 including the monthly breakdowns for the last three years for comparative purposes.

In the period under discussion the largest and smallest values of commodities valued at Birr 961.3 and 609.2 million were exported in 1986 and 1990, respectively. Export values fluctuated between 1981 and 1990 while import values were increasing up until 1987. There was a decline of 1.5% and 15.6% in the values of imports for the years 1988 and 1989 from that of 1987, respectively, and an upturn of 16.3% in 1990 compared to that of the preceding year.

The trade deficit has been increasing for most of the years under review. In 1989 the deficit declined significantly from Birr 1374.2 million to Birr 989.3 million largely due to a drop in the value of imports.

The value of exports in the last quarter of 1990 fell by 33.3% and 47.0% compared to that of the third quarter of the same year and the fourth quarter of 1989, respectively. The values of exports in the last quarter of 1990 and 1988 were about the same. The import value in the fourth quarter of 1990 dropped by 5.8% from that of the third quarter of the same year and increased by 47.7% and 25.7% from that of the last quarters of 1989 and 1988 respectively. Birr 401.3 million worth of imports was the monthly peak value registered in the last month of the third quarter of 1990.

Despite the fluctuations in the merchandise trade deficit, the balance of trade has been invariably negative. The unfavorable

import-export gap seems unbridgeable in the near future. There has ben no report on re-exports since 1986. But re-exports valued at Birr 2.4 million were recorded in December 1990.

B. Quantity and value of exports and imports by commodity section.

This part of the bulletin highlights the import and export data by commodity section.

As Table 2 portrays, crude materials, food and live animals are the major export earning items. About 82.5% of the export revenue was generated by the sale of food and live animals and crude materials. The export value of food and live animals in the last quarter of 1990 was valued at Birr 44.3 million. A decrease of 38.6% and 63.6% in the export value of food and live animals was recorded in the last quarter of 1990 over that of the previous quarter of the same year and the fourth quarter of 1989 respectively. Similarly, the export value of crude materials in the fourth quarter of the year under consideration dropped by 26.0% and 9.7% from that of the preceding quarter of 1990 and the same quarter of 1989, respectively.

A glance at the same table gives the hint on how the country allocates its money for imports. In 1990 more than half (53.3%) of the import values was allotted to machinery and transport equipment. A sizeable sum of money was also used for the purchase of food, fuel, chemicals and manufactured goods.

Money spent on machinery and transport equipment in the last quarter of 1990 increased by 62.1% and 124.1% from that of the previous quarter of the same year and the same quarter of 1989 respectively.

The import values of food,fuel and manufactured goods in the fourth quarter of the year under review showed a decline of 38.9%, 35.3% and 43.3% over that of the third quarter of the same year respectively. With the exception of manufactured goods, the values

of the above import items in the fourth quarter of 1990 rose by 3.1% and 125.4% from that of the same quarter of 1989. The import value of manufactured goods in the fourth quarter of 1990 fell by 17.8% from that of the same quarter of 1989.

C. Quantity and value of major export commodities by country of destination.

Table 3 gives an idea about the quantity and value of major export commodities by country of destination. As indicated in the table, coffee, hides and skins and vegetables are the major export earning items. The revenues generated by the export of coffee, hides and skins and vegetables in the fourth quarter of 1990 are 28.3%, 34.6% and 12.7% of the total export value of the same quarter of 1990. The export value of coffee in the last quarter of the year under review fell by 46.9% from that of the third quarter of the same year while the values of hides and skins and vegetables showed an increase of 12.9% and 88.0% respectively. Japan, Germany, Greece, Italy, U.S.A., Belgium-Lux. and Cuba were the major buyers of the above commodities in the last quarter.

The unit value of each major export commodity is roughly given in the above table. Coffee was sold at Birr 5.46 per kilo while a kilo of hides and skins was sold at Birr 18.17. The unit values of the above commodities vary from destination to destination. For instance, the value of hides and skins that was shipped to Germany was sold at Birr 38.99 and France at Birr 7.72 per kilo.

D. End-use classification of imports.

In the quarter under review the total value of imports amounting to Birr 698.6 million declined by 5.8 percent when compared with its level in the previous quarter.

An examination of the breakdown of imports by their end-use, however, shows substantial increase in value of machinery and

transport equipment imports, i.e. by 86.4%, 75.9% and 51.4% over the corresponding quarters of 1988, 1989 and the third quarter of 1990, respectively. The value of non-durable consumer goods grew by 39.6% against its level in the fourth quarter of 1989 while it declined by 41.0% compared with its amount in the corresponding quarter of 1988. In the quarter under review the value and share of raw materials, semi-finished goods, fuel and non-durable consumer goods declined against their levels in the corresponding quarters of 1988 and 1990.

E. Direction of trade.

Table 7 contains data on trade with different countries and on their merchandise trade balance with Ethiopia in the fourth quarter of 1990.

Export figures show that, as in the previous quarters of 1990 Europe is the biggest market of export commodities, proceeds from which reached Birr 39.6 million or about 42.2% of the total export earnings followed by Asia and America respectively. A closer look reveals that Japan was the main destination of export, receipts from which, amounted to Birr 16.2 million, i.e. 16.9%, followed by Germany with Birr 11.2 million or 11.6%, and Italy enjoying the third place with Birr 8.2 million or 8.5% of the total export earnings.

An examination of imports indicates that Europe is the leading continent, by selling Birr 396.8 million worth of commodities, Asia and America following in that order. With respect to individual countries Italy leads by selling Birr 82.8 million worth of commodities, Germany closely behind with Birr 78.6 million and USSR taking the third place by selling Birr 69.6 million worth of commodities.

The negative merchandise trade balance amounted to Birr 602.3 million, a slight increase against its level in the previous

quarter i.e., by Birr 5.1 million or about 1 %. Meanwhile the country had positive balance with certain countries in Africa, America and Asia, and most notably with Yemen.

Merchandise trade activities of Preferential Trade Area (PTA) member countries with Ethiopia as in the previous three quarters of 1990 remains insignificant except with Djibouti and Kenya.

Note: 1) The data are all in Gregorian Calendar.
2) The following symbols have been used
" - " Nil or negligible
"..." Data not available
