Results of the Survey of Retail Prices in Selected Urban* Centers of Ethiopia

Introduction

The Central Statistical Office has been collecting retail prices in Addis Ababa since 1963. Since 1966 the retail price index is published monthly.

Due to the increasing need for data on retail prices for other urban centers the collection of data on prices has expanded gradually to other centers.

Objectives of the Survey

The major objectives of data on retail prices are:-

- a) to study the level of prices charged by retailers,
- b) to help study changes in the economy,
- c) to assess the implementation of price control where it is in effect,
- d) to arouse the need for price control measures in areas and on commodities which were not covered previously,
- e) to help policy makers in taking decision on production and distribution of goods and services,
- f) to help national accountants in the valuation of outputs and
- g) to construct retail price indices.

Selection of Urban Centers

The urban centers covered in the survey were selected among the urban centers that satisfied one of the following conditions.

- a) industrial center
- b) dependent on agricultural activities
- c) center for trading and commercial activities
- d) located in the lowlands and in the border areas of the country
- e) capital cities of administrative regions

* urban is defined as an area which has at least a population of 2000 persons and which is normally administered by municipality.

Coverage:-

The Statistical Bulletin No. 18 published in September 1978 contained data on retail prices for 14 urban centers. The present Statistical Bulletin No. 28 covers information on retail prices of selected agricultural and industrial products for 23 urban centers.

These urban centers are:-

- | | |
|-----------------|-------------------|
| 1. Addis Ababa | 13. Ghimbi |
| 2. Agaro | 14. Goba |
| 3. Arba Minch | 15. Gonder |
| 4. Assab | 16. Harar |
| 5. Assela | 17. Jimma |
| 6. Asmara | 18. Nekemt |
| 7. Awassa | 19. Mekele |
| 8. Bahir Dar | 20. Mettu |
| 9. Debre Markos | 21. Nazret |
| 10. Dessie | 22. Negele Borena |
| 11. Dilla | 23. Shashamene |
| 12. Dire Dawa | |

Methodology of Data Collection

In a selected town retail prices of about 260 items are collected from retail shops, markets and other outlets. At least three quotations for each item are recorded and the data for every item is filled in three to five separate questionnaires depending on the size and business activity of the urban center. Out of the 260 items covered, 71 items are selected and included in this report based on the importance and comparability of the prices between urban centers.

The survey in each urban center starts on the 13th of a European calendar month and is completed at the end of the month. This period is chosen so that it corresponds with that of the Addis Ababa survey.

The retail price survey is undertaken in the selected towns every quarter with the exception of Addis Ababa and Asmara in which the survey is conducted every month. The months in which the survey is undertaken are December, March, June and September.

Presentation of the Survey Result.

This report covers the result of the survey of retail prices for 1978 and 1979.

Quarterly prices of the 71 selected items are presented in the Bulletin. The annual average price is then provided calculated on the basis of the average prices collected in the quarters.

The break down of retail items presented in this report are classified according to the following major groups.

- | | |
|--------------------|-----------------------------|
| 1. Food | 5. Medical care |
| 2. Household items | 6. Personal care |
| 3. Clothing | 7. Reading and Recreation |
| 4. Transportation | 8. Other goods and services |

Limitation of the Data

The items chosen are subject to variation in kind and quality due to changes in taste, fashion, technological development and market conditions. Thus when an item disappeared from the market the price of the substitute item was collected in the succeeding quarter while keeping the old item in the questionnaire. This applies mainly to medicinal items, leather shoes, readymade clothing and other industrial products. Where no substitute was available the price collected for the previous period was taken as an alternative. In addition the prices quoted in each month of the quarter may not be a good representative of the quarter. With these in mind one should be cautious while using the result of this survey.
