Introduction

International trade is a major global operation which has assumed great importance economically and politically over the years. From its inception, trade between countries has been important due to at least three reasons. 1) every country lacks some vital resources that it can get only by trading with others; 2) differences in each country's climate, labor force and other endowments make it a relatively efficient producer of some goods than others and 3) specialization permits larger outputs and can therefore offer economies of large scale production.

Thus, the availability of reliable and up-to-date statistics of international trade becomes important to assess the economic, financial and budgetary policy of a country and in the designing implementation and evaluation of trade and finance agreements between countries and organizations. In the field of statistics itself, international trade statistics have been indispensable in the compilation of national accounts and balance of payments statistics.

In view of this and the overall responsibility of the Central Statistical Authority (CSA) to provide statistical references in all fields of statistics, the Authority found it imperative to publish data pertaining to Ethiopia's foreign trade. The items included are exports and imports of commodities by type, volume, value, direction of trade and end-use.

In this publication classification of commodities covered follow the Standard International Trade Classification (SITC Rev 2). Ethiopia's foreign trade statistics adopt the General Trade system in the collection of merchandise trade data, i.e, all goods that cross in the boundaries of the country for domestic consumption or for re-export are included under import. Domestically produced goods and commodities of import which are exported after being transformed, improved or repaired are included in export. Re-export commodities are ones which leave the country in the same state as when they enter.

Another concept which needs elaboration is unit value. A closer look at the detailed tables of value and quantity of imports and exports by commodity and trading partner reveals that the commodities described rarely refer to homogeneous products. It would be unlikely for a more detailed classification in respect of any of those items to be formed for purposes of international trade. Yet each of them can be divided into a number of different species varying in size, quality, taste and price. In the circumstance, therefore, it is expedient when attempting to derive prices from quantities and value of commodities as reported in international trade statistics to resort to unit value ($UV = \text{Value}/\text{Quantity}$). It is possible to quote the price per unit of a specific variety of the item. However, in respect of the item in general it is proper only to refer to an average price, that is, a unit value.

Review of merchandise trade

A. General

The annual value of exports, imports, re-exports and trade balance for the years 1980 through 1989 and monthly figures of 1988, 1989 and the first three quarters of 1990 are presented in Table 1.

From export receipts during the years under review, we find that the highest figure recorded was in the year 1986, about Birr 961.3 million and the lowest observed, amounting to Birr 698.7 million, in 1985.

Like wise the highest value of imports Birr 2279.5 million, was registered in 1987 and the lowest, Birr 1494.7 million, in 1980.

With regard to trade balance in the years under review a deficit ranging from Birr 615.6 million to Birr 979.8 million was observed in the four years, that is, from 1980 through 1983 while a deficit of Birr 1040.0 million and above was recorded for the years between 1984 and 1989. Balance of merchandise trade in 1987 (a deficit of Birr 1512.3 million) was the highest while that of 1980 (a deficit) of Birr 615.6 million) was the lowest.

Comparing quarterly values for the years 1988 and 1989 export earnings in the second quarters of 1988 and 1989 recorded the highest amount of Birr 300.2 million and Birr 324.2 million, and the lowest amount of Birr 99.4 million and Birr 181.5 million were observed in the fourth quarters of 1988 and 1989 respectively. Similarly values of imports reached their peak in the third quarter of 1988 and fourth quarter of 1989 amounting to Birr 612.3 and 523.6 million respectively. In observing the third quarter export values of 1988, 1989 and 1990, we find, that values of exports declined from quarter-to quarter reaching Birr 144.5 million in the respective quarter of 1990. This amount was less than the value of the corresponding quarter of 1989 by 23.6 percent.

This reduction is mainly attributed to the decline in export earnings by Birr 35.5, Birr 2.2 and Birr 7 (all in millions) in the months of July, August and September respectively. On the other hand value of import in the third quarter of 1990 increased by 45.8 percent as against that of third quarter of 1989 from Birr 508.6 million to Birr 741.6 million.

In general the balances of trade both annually and monthly are negative showing that the values of commodities bought are higher than the value of commodities sold through out the periods indicated in Table 1. In compiling quarterly data from the table it is observed that the largest deficit of Birr 597.1 million was recorded in the third quarter of 1990.

B. Quantity and value of exports and imports by commodity section.

This section of the bulletin deals with data on quantity and value of exports and imports by commodity section for the third quarter of 1989 and 1990 shown in Table 2.

Export proceeds in the third quarter of 1990 amounted to Birr 144.5 million showing a reduction of 23.6 percent compared to that of corresponding quarter of 1989, while its quantity increased by 96.0 percent.

Value of imports in the third quarter of 1990 reached Birr 741.7 million an increment of Birr 232.8 or 45.8 percent as against the same period of 1989, import value of which was Birr 508.8 million. With the exception of beverage and tobacco, chemical elements and miscellaneous manufactured articles which showed declines in their import values, all the others showed increments. In addition an increase of 22.0 percent in the import quantity from 437,595 tons in the third quarter of 1989 to 533,815 tons in the third quarter of 1990 was observed. Such an increase in the quantity of imports is associated with increased quantities of imports of food and live animals, crude materials, animal and vegetable oils and machinery and equipment. The amount of food and live animals imported increased by 151.6 thousand tons in the third quarter of 1990 compared to similar period of the preceding year.

Out of the total export earnings in the third quarter of 1990 the highest amount, i.e, Birr 72.2 million or about 50.0 percent, was the receipt from export of food and live animals while the next highest Birr 47.6 million or 33.0 percent was the receipt from export of crude materials and the remaining Birr 24.7 million or 17.1 percent of the total export proceeds was obtained from export of other commodities. This was also the pattern followed in 1989.

C. Quantity and value of major export commodities by country of destination.

Table 3 of the bulletin contains data on quantity and value of major export commodities by country of destination in third quarter of 1990.

Coffee was the major export commodity, which earned Birr 51.4 million in receipts, the major buyer's being Germany, Japan and France. In another development quantity of exports in the quarter mentioned exhibited a sharp increase (115.8 thousand tons) compared to similar period of 1989. Almost all major export commodities were responsible for the increment.

Unit values for the major export commodities are also presented in the table to enable evaluate the price trend of these commodities. An examination of price per kilo of coffee reveals that for example export to Saudi Arabia was priced at Birr 7.8 per kilo, while export to Canada was priced at Birr 5.91 per kilo. The maximum price was obtained from Saudi Arabia and the lowest from Holland, with respect to hides and skins different values per kilo were obtained ranging between Birr 3.08 and Birr 59.2.

While coffee remains to be the leading export item oil seeds took the lowest share out of the total in terms of quantity value.

D. End-use classification of imports.

As its name indicates this table is designed to show value of imports by their end-use. As could be expected machinery and transport equipment is the leading import commodity followed by non-durable consumer goods and fuel, respectively. Although machinery and transport equipment enjoys the leadership its share has declined consistently from 51.58 percent of the total import value in 1988 of third quarter to 38.21 percent and further to 32.25 percent in the corresponding quarters of 1989 and 1990 respectively. However the share of raw materials and fuel exhibited a steady increase in the quarters of the respective years. The figures show that the value of food imports in the third quarter of 1990 increased significantly over the same quarters of 1989 (351.9 percent) and 1988 (112.6 percent) respectively.

The overall value of imports in the respective quarters of 1988, 1989 and 1990 showed ups and downs, i.e, from Birr 612.3 million in 1988 to Birr 508.8 million in 1989 and then to Birr 741.7 million in 1990.

E. Direction of Trade

Table 7 deals with data on trade partner countries and on their merchandise trade balance with Ethiopia in the third quarter of 1990.

With respect to exports the figures show that goods destined to Europe took the biggest share i.e, Birr 53.5 million worth of commodities or about 37 percent of the total export value of Birr 144.5 million. Export to Asia amounted to Birr 44.2 million as against Birr 29.2 million to Africa comprising about 30.6 and 20.2 percent of the total exports respectively. A closer look reveals that Djibouti was the main destination of export, receipts from which amounted to Birr 28.6 million, i.e, 19.8 percent, closely followed by Japan with Birr 27.8 million, i.e., 19.3 percent, and Germany ranking third with Birr 20.9 million or 14.5 percent, of the total export.

Examining the import during the same period we find more or less the same picture. Europe is the leading continent as a source of the imports, Asia is second by selling Birr 100.5 million worth of commodities or 13.6 percent of the total, leaving America behind to take the third place in sales, which reached Birr 70.7 million, i.e., 9.5 percent, of the total import.

If we look at individual countries Italy enjoyed the leadership by selling Birr 120.9 million worth of commodities or 16.3 percent followed by USSR which sold Birr 100.6 million worth of commodities comprising 13.4 percent of the total import.

In the quarter under review the negative balance of merchandise trade amounted to Birr 597.2 million. Note that the country had a positive balance with few countries such as Saudi Arabia and Djibouti. On the contrary Ethiopia had a negative balance of merchandise trade with the other major trading partners, namely Italy, Japan and the U.S.A.

As shown in the table, preferential trade Area member countries merchandise trade activities with Ethiopia is not significant, save that of Djibouti and Kenya. Ethiopia exported commodities worth about Birr 28.6 million to Djibouti against Birr 9.2 million of imports. The picture is different with Kenya. Export receipts from Kenya reached about Birr 0.6 million compared to imports worth about Birr 13.4 million.

Note:- 1) The dates are all in Gregorian Calendar.

2) The following symbols have been used
