Introduction

International trade is a major global operation which has assumed great importance economically and politically over the years. From its inception, trade between countries has been important due to at least three reasons : (1) every country lacks some vital resources that it can get only by trading with others; (2) each country's climate, labour force, and other endowments make it a relatively efficient producer of some goods and an inefficient producer of other goods; and (3) specialization permits larger outputs and can therefore offer economies of large-scale production.

This importance has grown tremendously over the years as external trade influences positively production and employment. The terms of trade and their effect upon the balance of payments and the national income became questions of growing concern among economists and politicians and provided a basis for research and trade negotiations. Indeed, its increasing importance has been recognised by the United Nations, which has created an agency, namely the, United Nations Conference on Trade and Development (UNCTAD), not only to conduct research and undertake studies on matters in that area, but also to act as a forum for discussion and planning at the international level in that field.

In view of this, and the overall responsibility of the central Statistical Authority (CSA) to provide a convenient statistical reference in all fields of statistics the Authority found it imperative to resume the publication of data pertaining Ethiopia's foreign trade. The items included are exports and imports of commodities by type, volume, value and direction of trade. Such statistics used to be published on a monthly basis until 1973.

In this publication classification of commodities used follow the Standard International Trade Classification (SITC Rev.2). Ethiopia's foreign trade statistics follow the General Trade System in the collection of merchandise trade data, i.e., all goods that cross in the boundaries of the country for domestic consumption or for re-export are included under import. Domestically produced goods and commodities of import which are exported after being transformed, improved or repaired are included in export. Re-export commodities are ones which leave the country in the same state as when they enter. Another term which needs elaboration is unit value. A closer look to the detailed tables of imports and exports by commodity, quantity, trading partner and value reveals that the commodities described very rarely refer to homogeneous products. It would be unlikely for a more detailed classification in respect of any of those items to be formed for purposes of international trade. Yet each of them can be divided in to a number of different species, varying in size, quality, taste and price. In the circumstances therefore, it is expedient when attempting to derive prices from quantities and values of commodities as reported in international trade statistics to resort to unit values ($UV = \frac{\text{Value}}{\text{Quantity}}$). It is possible to quote the price per unit of a specific variety of the item. However, in respect of the item in general it is proper only to refer to an average price, that is, a unit value.

3. Review of Merchandise Trade

A. General

The summary table, Table 1, exhibited annual figures for the years 1980 through 1989 and monthly statistics for the first half of 1990, i.e., January to June. Moreover, monthly data are also included for 1988 and 1989 for comparison. From the table one can observe that the value of exports has been the highest in 1986 amounting to Birr 961.3 million while at its minimum in 1985 amounting to Birr 698.7 million of all the years under consideration. Export values showed ups-and-downs in the year's under review. However, value of imports increased in the first eight years and declined in the last two years under review. On the other hand, value of imports increased in the first eight years and declined in the last two years under review. It rose from Birr 1,494.7 million in 1980 to Birr 1526.6 million in 1981, and making further increments reached a peak of Birr 2279.5 million in 1987. Value of imports was Birr 2245.9 million in 1988, 1.5 percent less than the previous year's value. In 1989 value of imports declined further to Birr 1,975.3 million which is less than the previous year's.

The deficit in the balance of merchandise trade has been twice the value of exports in most of the years under review. However the widened deficit seems to dampen since 1987. A deficit of Birr 1,512.3 million in 1987 was the highest recorded while a deficit of Birr 615.6 million in 1980 was the lowest of all the year's under consideration.

The value of exports in the first half of 1990 showed a decrease of Birr 190.4 million or 34.2 percent over that of the same period of 1989.

Parallel to this the corresponding value of imports decreased during the same period from Birr 943.1 million in 1989 to Birr 798.9 million in 1990 revealing a 15.3 percent decrease. Looking at the monthly figures of the first half of 1990, the value of exports has shown ups-and-downs from Birr 40.7 million in January (the least) to Birr 82.4 million in May (the highest) and again declining to Birr 55.3 million in June. Unlike exports the value of imports showed a steady decreasing pattern, the only exception being April in which a record high value of Birr 184.8 million was exhibited to be followed by declining values in May and June.

As to the monthly figures value of exports in July 1988 was at its peak amounting to Birr 155.3 million, and at its lowest in November of the same year amounting to Birr 28.4 million. In 1989 the highest value of exports of Birr 128.5 million was recorded in May, and the minimum value of Birr 36.2 million in September.

All monthly balance of trade data are negative showing that the value of commodities bought are higher than the value of commodities sold throughout all the period under consideration. It should be noted that value of re-exports was reported for the first six years under review, i.e, from 1980 through 1985. The maximum value of re-exports amounted to Birr 1.0 million, in 1985 while no re-export was reported in the last four years, i.e, from 1986 to 1989.

B. Quantity and value of exports and imports by commodity sections.

Export in the second quarter of 1990 was about 100.7 thousand tons revealing a 13.9 percent decrease compared to 116.9 thousand tons in the corresponding quarter of 1989. Similarly the value of exports decreased from about Birr 310.8 million in 1989 to about Birr 196.4 million in 1990 in the same quarters.

Food and live animals was the leading export commodity both in the second quarters of 1989 and 1990 with earnings of Birr 250.3 million and 140.1 million in that order. Crude materials inedible except fuels took the second place collecting Birr 49.4 million and Birr 38.7 million in the quarters under review of 1989 and 1990, respectively,

Similar to exports, both quantity and value of imports decreased in the second quarter of 1990 as compared to that of 1989 second quarter. Quantity of imports decreased by 35,231 tons while the value went down by about Birr 49.6 million.

Machinery and transport equipment was the major import costing Birr 168.0 million, 37.7 percent of total import value, and Birr 149.4 million, 37.7 percent of total import value, in the second quarters of 1989 and 1990, respectively. Import of chemical elements worth Birr 87.3 million in second quarter of 1989 whereas manufactured goods worth Birr 89.7 million was imported in the same quarter of 1990 to capture the second place.

C. Quantity and value of major export commodities by country of destination.

Coffee, hides and skins, oil seeds and vegetables, fresh or frozen are the major commodities where Ethiopia's export earnings significantly depend. Data on these commodities for the second quarter of 1990 are presented in Table 3.

Of the total export value for the period under consideration, Birr 112.9 million (57.47 percent) was constituted by coffee. Hides and Skins were on the second place earning about Birr 34.6 million or 17.60 percent of the total export value. Export of vegetables (fresh or frozen) earned about Birr 33.4 million or 7.16 percent of the total export. Earnings from oil seeds comprise 0.77 percent (Birr 1.5 million) of the total export value.

Turning to country of destination, we can observe that coffee worth of Birr 37.7 million, a significant amount, was sold to West Germany. United States bought worth about Birr 33.1 million of coffee to take the second place, then Japan was the third major export destination which bought worth Birr 18.2 million of coffee.

Examining the unit value of each export commodities hides and skins were sold at Birr 15.31 per killo as against coffee at Birr 3.86 per killo and oil seeds at Birr 1.83 per killo. Vegetables (fresh or frozen) were sold at Birr 1.22 per killo. The unit value for coffee ranges from Birr 2.87 per killo to United States to Birr 6.70 per killo to Japan. Hides and Skins exported to Belgium-Luxemberg were valued at Birr 298.10 per killo, the maximum, against that to Greece, at Birr 3.16 per killo the minimum.

D. End-use classification of imports

End use classification of major imports for the second quarters of 1988, 1989 and 1990 is treated in Table 6. Total value of imports declined from about Birr 476.4 million in the second quarter of 1988 to about Birr 445.2 million and further to about Birr 395.6 million in the respective quarters of 1989 and 1990. Machinery and transport equipment, which took the biggest share, comprises 41.6 percent 34.98 percent and 37.15 percent

of the total value of imports in the second quarters of 1988, 1989 and 1990, respectively. Non-durable consumer goods was runner-up accounting to Birr 128.1 million (26.90 percent of total import value) in the quarter under review of 1988. While semi-finished goods earning Birr 91.6 million (20.58 percent of total import value) and about Birr 71.0 million (17.95 percent of total import value) for the same period of the years 1989 and 1990, respectively taking the second biggest share of the total corresponding import values.

The value of durable consumer goods rose from about 46.4 million in the second quarter of 1988 to about Birr 56.4 million in the same quarter of 1989 and further to Birr 68.3 million in the second quarter of 1990. But non-durable consumer goods declined substantially for the period under consideration. This decline is mainly attributed to the downfall in the value of food imports from about Birr 100.5 million in the second quarter of 1988 to about Birr 35.4 million in the corresponding quarter of 1989 revealing a 64.78 percent decline, and further to about Birr 27.90 million in the same quarter of 1990 showing a 72.24 percent decrease.

E. Direction of trade

Table 7 deals with data on trade partner countries and on their merchandise trade balance with Ethiopia in the second quarter of 1990.

With respect to exports, goods destined to Europe took the lion's share, i.e., Birr 97.6 million worth of commodities or about 49.70 percent of the total export value of about Birr 196.4 million. Export to Asia amounted to Birr 46.2 million as against Birr 39.6 million to America and Birr 13.0 million to Africa comprising about 23.51, 20.16 and 6.63 percent of the total exports, respectively. Germany was the main export destination country, receipts of which amounted to Birr 44.8 million, i.e., 22.8 percent followed by United States with Birr 38.6 million, i.e., 19.67 percent and Japan ranking third with Birr 27.6 million, i.e., 14.04 percent, of the total export.

Turning to import for the same period, we find almost the same picture. Europe is the leading continent as a source for the imports, comprising 73.67 percent of the total. Asia is second selling Birr 64.6 million worth of commodities or 16.33 percent of the total and Africa is third by selling Birr

19.1 million or 4.83 percent of the total imports. Italy sold about Birr 87.7 million worth of commodities or 22.17 percent of the total import to enjoy the leadership as a country of import origin followed by Germany which sold worth about Birr 48.9 million of commodities making 12.37 percent share of the total import value.

In the quarter under review the overall balance of merchandise trade showed a deficit amounting to about Birr 199.2 million. The country has a positive balance with some countries such as United States, Saudi Arabia, Djibouti, Peoples Democratic Republic of Korea (PDRK), Finland, Sudan and Yemen. On the contrary she has a negative balance with the major trading partners like Italy and Germany.

Finally it is worth nothing that the preterntial Trade Area (PTA) member African countries merchandise trade activities with Ethiopia remained insignificant for the period under consideration though Kenya and Djibouti did well. We exported to Djibouti commodities worth Birr 11.9 million against Birr 7.3 million of imports while export to Kenya was only about Birr 0.6 million as against about Birr 9.0 million worth of imports.

Note; - 1/ The dates are all in Gregorian Calendar
