(Hamle 1982) 247-256

INTRODUCTION

The Central Statistical Authority [CSA] started the collection of rural price in May 1981 in selected Farmers' Association Areas [FAs] in 12 Regions, excluding Tigray, Eritrea and areas inhabited by nomadic population. Thus as part of the Rural Integrated Household Survey Program [RIHSP] which was launched in 1980 the rural price survey, covering both retail price and producer price, is conducted on a monthly basis.

This report provides results of average retail price of goods and services for the period of February 1991 to June 1991 (Yekatit 1983 to Sene 1983 of Ethiopian Calendar). Due to lack of space, to accommodate all Regions, price is presented in four parts. In each of the first three parts, the first five tables provide monthly data from February to June 1991. To satisfy demand from local data users annual average retail price, based on the Ethiopian Budget Year 1983 (8 July 1990 - 7 July 1991), is presented in Table 6. However, as field enumerators take their annual leave in July and August, these months' data are not collected in all regions except, that July 1990 for North Gondar and South Gondar regions. Hence, the annual average covers only eleven months data (i.e., July 1990 and from September 1990 to June 1991) for North Gondar and South Gondar regions while it is less than ten months data for the remaining regions. Part four provides data for July 1990.

This report attempts to discuss the objective, scope and coverage, method of data collection, definition and provides tables of average retail price in rural areas by region and by item.

This eleventh issue updates Statistical Bulletin 115. Earlier issues on the same subject are Statistical Bulletins 37, 45, 57, 64, 83, 93, 96, 106, 107 and 115.

Objectives

The collection of retail price in rural areas has the following objectives:

1. to study the level of retail prices,
2. to study the disparities between prices at various distribution levels,
3. to study changes in the economy,
4. to provide data for national accountants in the valuation of output,
5. to construct rural price indices.

Scope and Coverage

As of September 1988 the geographic coverage of the survey was revised. As a result the rural price survey was conducted in one Autonomous Region and twenty five Administrative Regions. However, due to certain reasons the number of Regions, where price survey undertaken, shrank from twenty in February 1991 to thirteen in June 1991. As a result East Gojam, West Gojam, Metekel, North Gondar, South Gondar and North Wello Regions are not covered in the survey during the period under review and data for Asosa Region is only collected in February 1991.

The scope and coverage of the survey are constantly under review and necessary improvements are effected from time to time in the light of staff experience and in an effort to incorporate commodities mostly consumed by the rural population.

The major groups of items covered in the survey include food, drinks, tobacco and stimulants, household equipment, clothing, footwear, energy, medical care, personal care and effects, education, recreation, building materials and other goods and services.

Information on retail price of selected agricultural and industrial commodities is collected from retail outlets in the sample FAs. The allocation of FAs to the regions takes into account the size of the regions and has been considered to be a reasonable minimum size to provide meaningful estimates at Regional level.

The number of FAs covered in the survey, during the period under review, in each of the regions is given in Table A. However, it differs from that of previous periods due to several reasons.

Method of Data Collection

Each month of the Ethiopian Calendar (September to August) data collection staff of the CSA attempt to collect price in retail markets for a list of about 476 items in the selected FAs or from adjacent market places where households purchase most of goods and services for consumption and other purposes. Although price is collected from traders, in some cases price is obtained from consumers at the time of purchase. For each item on the price list the collector is expected to get a maximum of three prices from three different retailers or shops in the local market places.

Retail price data is mainly collected on market days throughout the reference month considering the work load of the enumerators and in accordance with the purchasing habits of consumers in the selected FAs.

Definition

A retail price is the money cost to the final purchaser of a specified unit of sale. It is inclusive of all sales and excise taxes.

Note

1. The average column in the third part of the report gives a simple average of the corresponding item over the regions.
2. The minimum that the balance can weigh is 10 grams. Thus items which are sold in small quantities and whose weight fall under 10 grams cannot be weighed as accurately as possible and as a result may affect the reliability of the price of these items in some respect.
3. The symbol "N.A." is used for data not available or doubtful.
