I. INTRODUCTION

The Central Statistical Authority, CSA, has been collecting retail prices of goods and services in Addis Ababa since 1963. However, due to the ever increasing demand for the data, the geographical coverage of the survey was revised to include fourteen urban centers in 1975 and twenty-two urban centers in 1978, bringing the total number to ***twenty-three***. In addition to the previous twenty-one urban centers, four Kilil capitals (i.e., Asosa, Asaita, Gambela and Jijiga) and Debre Zeit, were included in the survey since March 1996. Hence, the present report covers ***twenty-six*** urban centers.

This report provides data on average prices in selected urban centers on the basis of the current administrative hierarchy, i.e., Kilil (regional states). The first part gives data on average retail prices of goods and services, while the second part presents data on average prices of food and accommodation (bed room) services in hotels in selected urban centers by kilil from May 1998 to August 1998 (Ginbot 1990 -- Nehase 1990). Monthly prices are presented in the first four tables while annual average prices are given in the last table of both parts for Ethiopian Calandar, i.e., from September 1997 to August 1998 (Meskerem 1990 - Nehase 1990).

Due to lack of space to accommodate all urban centers in one page, urban centers are grouped into three i.e., Group A, Group B, and Group C.

- **Group A** consists of Mekele, Asaita, Bahir Dar, Debre Markos, Desie, Gonder, Agaro, Asela and Debre Zeit.
- **Group B** consists of Ghimbi, Goba, Jima, Metu, Nazareth, Negele Borena, Nekemt, Shashemene, Jijiga and Asosa.
- **Group C** consists of Arba Minch, Awasa, Dila, Gambela, Harar, Addis Ababa, Dire Dawa and monthly national average of retail prices.

This twenty fourth edition updates Statistical Bulletin 197. Earlier issues on the same topic are Statistical Bulletins 18, 28, 32, 41, 54, 66, 71, 80, 91, 114, 127, 144, 145, 146, 147, 150, 156, 165, 168, 177, 185, 187 and 197.

II. OBJECTIVES

The main objectives of the survey are to:

- study the level of retail prices;
- assess the disparity of prices in each urban center;
- study changes in the economy;
- provide data for national accounts and researchers;
- prepare retail price indices.

III. SCOPE AND COVERAGE

The retail price survey, in urban areas, covers the collection of prices of major agricultural and industrial goods including food, drinks, drink constituents, tobacco, clothing and footwear, building materials, energy, household equipment, medical care, transportation, education, recreation, farm equipment, hotel services (food and accommodation) and other goods and services obtained from various outlets.

Due to Addis Ababa's large population, the city is given more weight than other urban centers. As a result, it was conveniently grouped into four major zones, i.e., Merkato, Kirkos, Silasie and Piazza. Price data collection is conducted independently in each zone and the average represents Addis Ababa's price data.

IV. METHOD OF DATA COLLECTION

The retail price of goods and services are collected from major outlets in selected urban centers by enumerators with the use of kitchen balance and measuring tape. The outlets include markets, kiosks, groceries, butcheries, pharmacies and other service giving establishments where households purchase most of their goods and services for household consumption and other purposes.

Retail prices of goods and services are collected from traders. However, sometimes, prices are also obtained from consumers at the time of purchase. In addition, wages of domestic servants and coolie charges are obtained from households. For each item a maximum of three price quotations are collected from three retailers on the same day. Data collection starts on the 7th day of the European Calendar and lasts for about 20 days.

Since an interview method of data collection is utilized rather than actual purchase and recording of prices, it may result, in some instances, in exaggeration or under estimation of prices. However, since enumerators are permanently assigned to every urban center and reside there, they have a good chance to familiarize themselves with the market and be on friendly terms with traders, owners of establishments and households. Thus, it can be expected that respondents were cooperative and provide reliable information over time.

Finally, it has to be recalled that, since the start of the collection of price data in 1963, retail prices in this Bulletin as well as in previous Bulletins indicates the free market prices prevailing in the urban centers under study.

V. Definitions

Urban Center: It is generally defined as a locality with 2,000 or more inhabitants. However, for the purpose of the 1994 Population and Housing Census Map Work, urban centers include the following regardless of the number of inhabitants[1].

a) All administrative capitals,
   - I) regional capitals,
   - ii) zone capitals not included in (i),
   - iii) wereda capitals not included in (i) and (ii),
   - iv) localities with urban development associations not included in (i), (ii), and (iii).

b) Municipal towns not included in (a) above,

c) All localities that are not included either in (a) or (b) above, having a population of 1,000 or more persons, and whose inhabitants are primarily engaged in non-agricultural activities.

Note that localities with population of less than 1,000 persons should be considered as rural. However, for the purpose of this survey the selected urban centers in general satisfy the following conditions:

- A capital of an administrative region,
- An industrial center and/or,
- A center for trade and commercial activities.

Retail Price: A retail price is the money cost to the final purchaser of a specified unit of sale. It is inclusive of all sales and excise taxes.

Hotel: Hotel is an establishment rendering combined services of rooming, food and drinks on a fee basis.

---

[1]Transitional government of Ethiopia, Central Statistical Authority, 1992, Manual for Census Map work. Addis Ababa. Pp. 3-4.

VI. Note

1. The minimum that the balance can weigh is 10 grams. Thus, items that are sold in small quantities like spices and whose weight fall below 10 grams can not be weighed as accurately as possible and as a result may affect the reliability of prices of these items in some respect.

2. The average column is a simple arithmetic average of prices for each item.

3. The symbol "-" is used for data not available or doubtful.
