NOTES ON THE CALENDAR

In Ethiopia various organizations use different calendar years in compilation of statistical series. The following table sets out the relation between the Ethiopian and the Gregorian calandar. In the Ethiopian year there are 12 months of 30 days each and one short month, Pagume, which has 5 days for three consecutive years and 6 days on the fourth year. Moreover, the trade year and the fiscal year are shown in the table.

Throughout the Abstract when figures were obtained for the Gregorian year a split year is shown in the Ethiopian calendar, and inversely, split Gregorian years are shown where the figures are for Ethiopian years. For example 2010 in the Gregorian calendar is the period between Tahasas 23,2002 to Tahasas 22, 2003 E.C and is shown to 2002/03. Likewise, 2002 E.C covers the Gregorian year between September 11,2009 & September 10,2010 and is shown as 2009/ 2010.

SECTION I . EXTERNAL TRADE

The trade statistics refer to goods entering to all customs ports, stations, airports, and post offices in the country. The original information is obtained from the Customs Authority .

The Ethiopian Commodity Trade Classification(ECTC), based on the Standard International Trade Classification(SITC) revised, was introduced as from January 1962. In 1993, the Customs, revised its ECTC based on the Harmonized System (HS). In accordance with the Customs revision the Central Statistical Authority has also adopted the Harmonized System. This classification consists of 99 chapters, 1253 H.S headings and 5063 subheadings and 8-digit 5330 H.S codes. Figures on foreign trade refer to year ending December 31.

IMPORTS:- Are goods entered at the time of importation for consumption or warehousing into Ethiopia, including goods which are subsequently re-exported or re-directed.

RE-EXPORTS :- Are imported goods subsequently re-exported without change of form, including ships' or aircraft's stores.

EXPORTS :- Are Ethiopian products, including imports which are exported after being transformed, improved or repaired.

COVERAGE:-

Included are:-

All Government and non-Government transactions, goods financed by grants and loans, postal trader, bunkers' and ships' stores.

Excluded are:-

Gold , temporary imports, personal items of passengers, goods imported by diplomatic, consular Missions and cinema films.

VALUATION

a) Import - c.i.f. Ethiopian ports and customs stations, but c.i.f. - Djibouti values are accepted if so shown on the declaration. Thus, transit charges, insurance and freight charges for railway carriage between Djibouti and the border of Ethiopia are not included in values of imports using this route.

b) Exports - f.o.b. Ethiopian ports and customs stations, but goods dispatched through Djibouti are valued at f.o.b. at the Ethiopian customs station of clearance on the Ethio- Djibouti Railway and hence exclude freight, insurance and other charges from the loading station to the border.

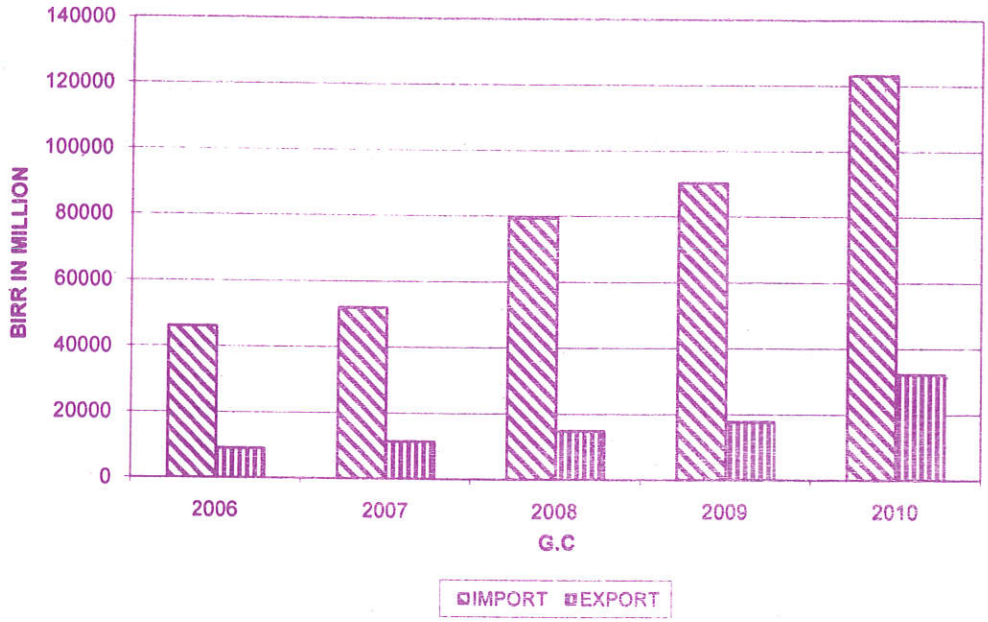

COUNTRY OF ORIGIN:- The importers are obliged to submit manufacturer's invoices with import declarations. Generally, the country of origin is then the country in which goods were grown or produced.

DESTINATION: - Is the country of final destination to the extent identifiable from records. Special care in this matter is given by the customs authorities to exports consigned to Djibouti and Aden .

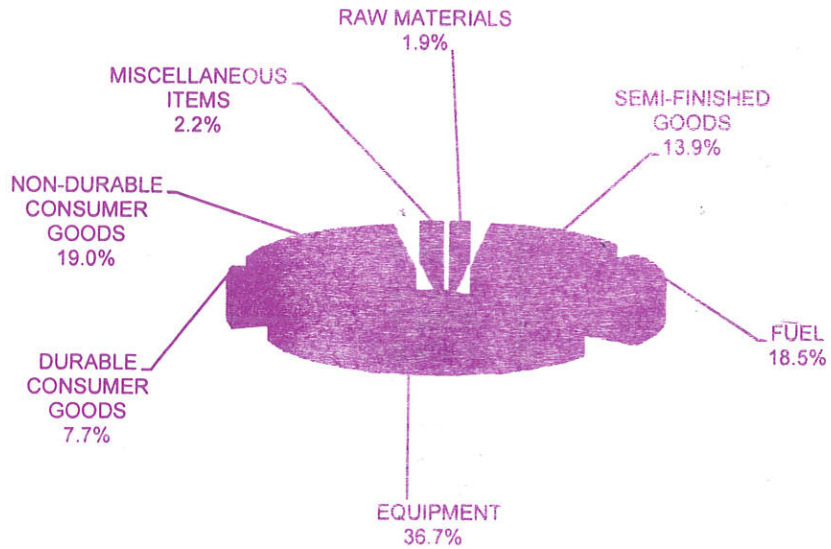

The trade statistics published in the annual abstracts are summary figures and even the detail tables given are only up to the two digit level of the Harmonized System Trade Classification. For more detailed information, readers are referred to Annual Trade Statistics bulletin published by the Customs Authority.

N.B. - N.E.S means Not Elsewhere Specified
- The symbol "-" means either no trade, or trade less than half the unit shown.

SECTION J: NATIONAL ACCOUNTS

In Principle, in the measurement of national accounts aggregates three basic approaches may be applied depending upon the available statistics, i.e. production, income and expenditure approaches.

(I) ***The production approach****: takes production as the total value of goods and services less intermediate inputs originating in the various industries which make up the economy.*

(Ii) ***The income approach****: considers production as the sum of the incomes received by those producing these goods and services.*

(iii) ***The expenditure approach****: sums up the value of the final uses of goods and services reduced by the value of imports of goods and services.*

In Ethiopia's National Accounts, the production approach has been mainly used but the expenditure approach is applied in the case of Public Administration and Defense, Education, Medical and Health Services. The income approach is hardly used except in some service sectors such as domestic services. The total value of goods and services thus arrived at has been given according to the industry producing them. However, no breakdown by type of factor income has been attempted. In the expenditure side of Ethiopia's National Accounts private consumption expenditure was arrived at by utilizing information from rural and urban consumption surveys conducted by the Central Statistical Authority over the years.

Since the reference period for the government budget and plans in general is the Ethiopian Fiscal Year (E. F. Y.), in order to facilitate the monitoring and evaluation of plan implementation it has been decided to change the reference period of national accounts data from G. C. Y. To E. F. Y. accordingly, all national accounts tables except the Rest of the World Accounts have been complied in the E. F. Y.

The concepts and definitions of major aggregates used in the National Accounts are given below.

***Gross Domestic Product (GDP) at Market Prices**: is the market value of the goods and services produced within the territory of Ethiopia, before any allowance is made for the consumption of fixed capital. It is equal to the sum of consumption expenditure by private consumers and government, gross domestic capital formation, and net export of goods and services.*

***Gross Domestic Product (GDP) at Factor Cost**: is the sum of income accruing from the production of goods and services. It differs from the Gross Domestic Product at Market Price by the amount equal to indirect taxes less of subsidies.*

***Gross National Product (GNP) at Market Prices**: is the market value of goods and services before deduction of provision for the consumption of fixed capital, attributable to the factors of production supplied by residents of Ethiopia. It is equal to the sum of consumption expenditure, gross domestic capital formation, and net export of goods and services plus net factor income received from abroad. It differs from the Gross Domestic Product at Market Prices by the amount of net factor income from abroad.*

***Net Factor Income from Abroad**: is excess of factor incomes (interest, dividends, profits, etc.) paid abroad over factor incomes received from abroad.*

***Private Consumption Expenditure**: is the value of goods and services (purchased or self-produced) consumed by households and private non-profit institutions plus the net value of gifts in kind received from abroad.*

Government Consumption Expenditure: *represents the current expenditure on goods and services by central and municipal government. It comprises compensation of employees, purchases by government from local enterprises and from abroad, less sale by government of goods and services. Government consumption expenditure excludes transfer payments, interest paid by government and subsidies.*

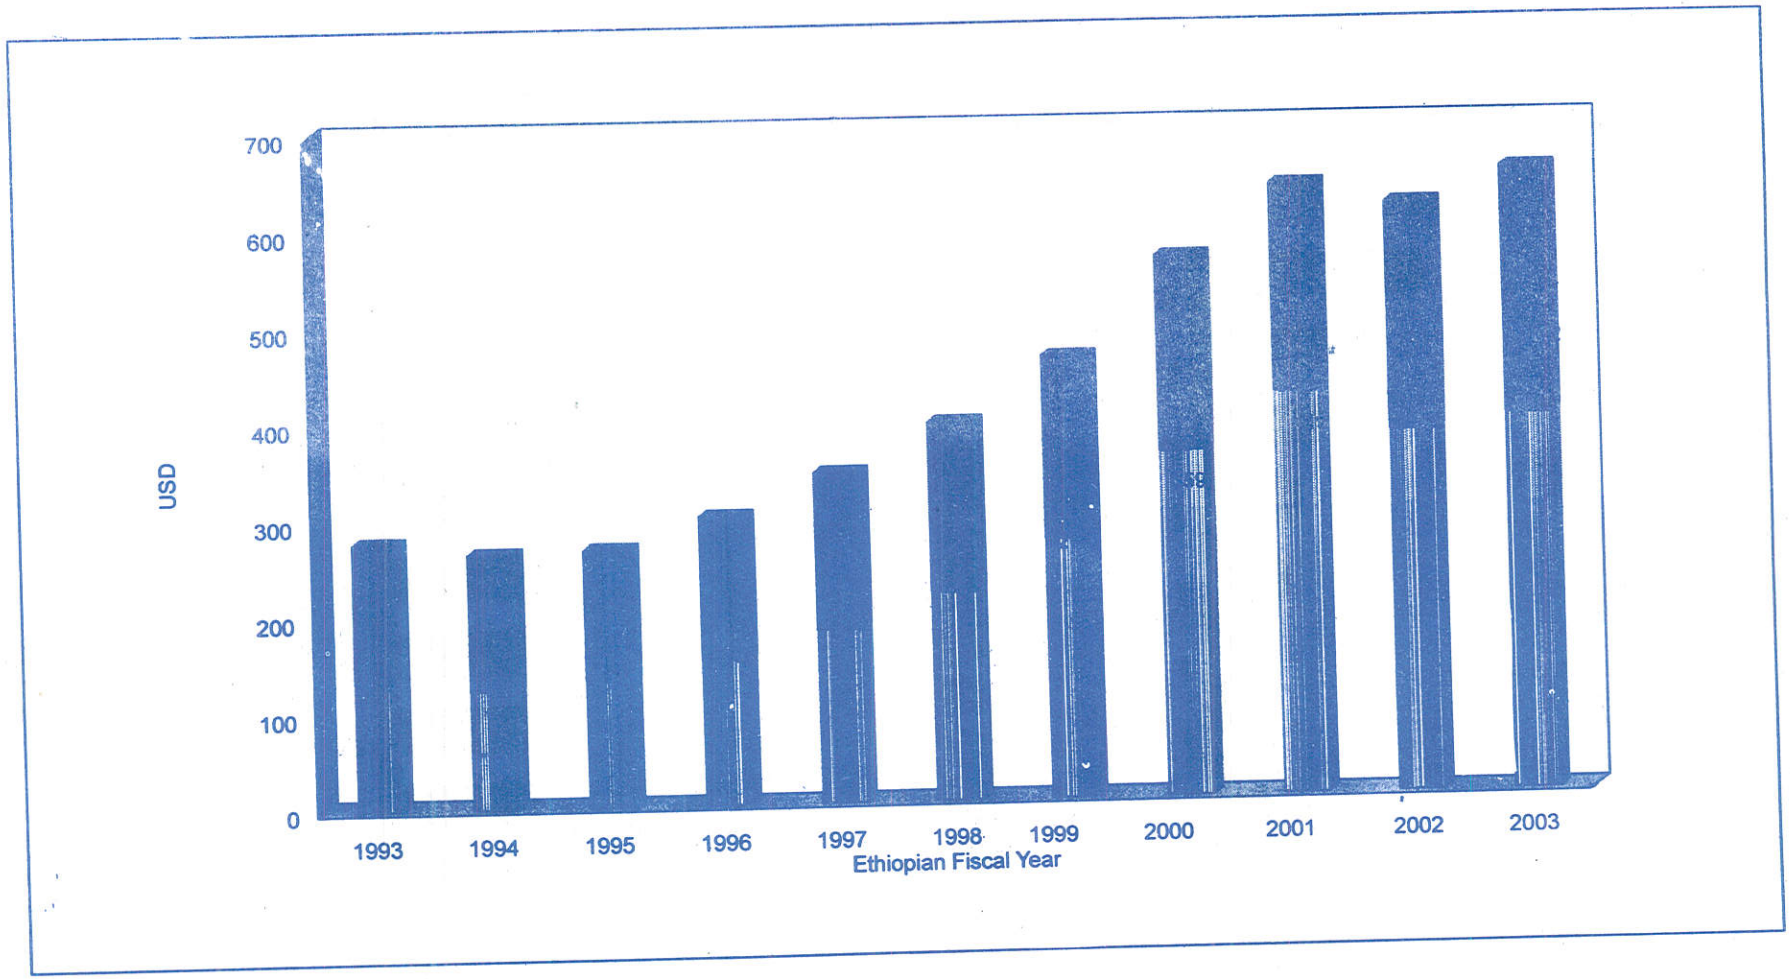

Gross Fixed Capital Formation: *includes the value of the purchases and own account construction of fixed assets (land, civil construction and works, machinery and equipment) by enterprises, households, private non- profit institutions and government.*

N.B.

1. *The base year 1960/61=100 is changed to 2000/2000 =100 since 2005/2006*

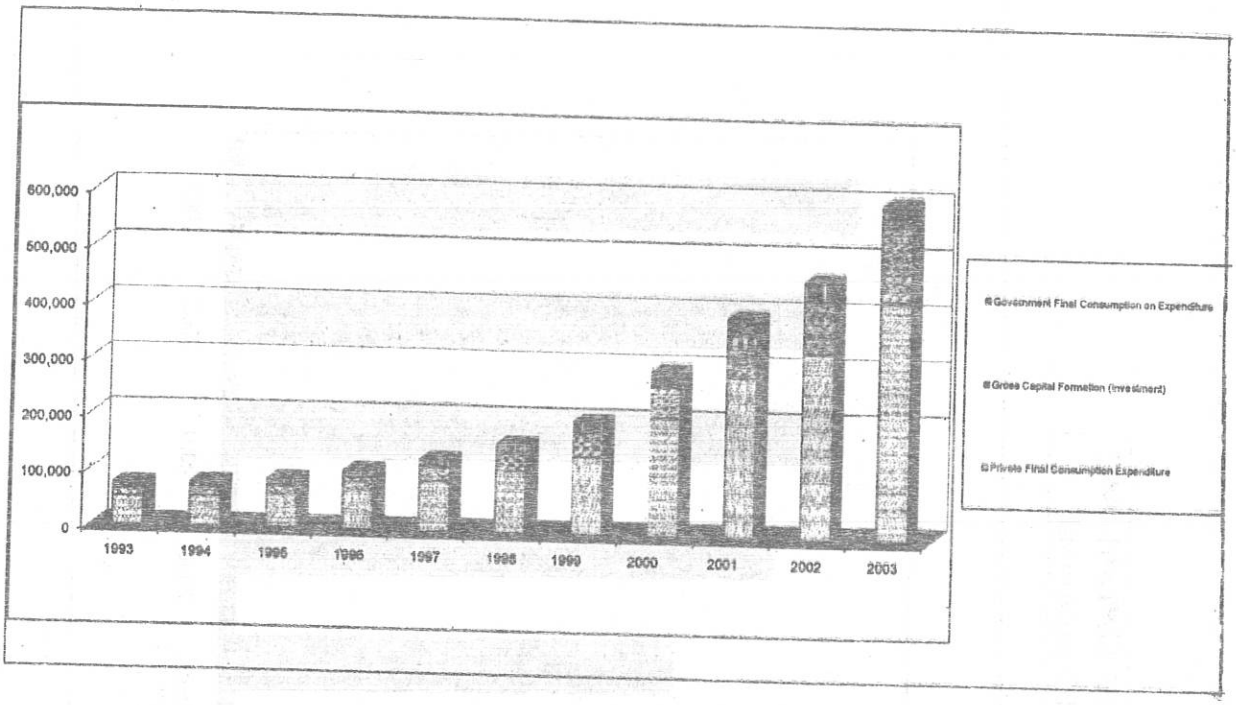

2. *The National account data in this volume are based on data obtained from Ministry of Finance and Economic Development.*
