Table of Content ---------- i
List of Summary Tables ---------- iii
List of Figures ---------- iv
List of Statistical Tables ---------- iv
Abbreviations ---------- viii

Chapter I Background to the Survey

1.1 Introduction ---------- 1
1.2 Objectives of the Survey ---------- 2
1.3 Contents of the Questionnaire ---------- 2
1.4 Concepts and Definitions of Key Variables ---------- 4
1.5 Limitation of the survey ---------- 5
1.6 Organization of the Report ---------- 5
1.7 Training of Field Staff ---------- 6
1.8 Organization of Field Work ---------- 7

Chapter II Survey Methodology and Data Processing

2.1 Coverage ---------- 9
2.2 Sample Frame ---------- 9
2.3 Sample Design ---------- 9
2.4 Sample Size and selection scheme ---------- 10
2.5 Data Processing ---------- 13

Chapter III Size and Socio-Demographic Characteristics of the Population

3.1 Introduction ---------- 15
3.2 Size and Age- Sex structure of the Population ---------- 15
3.3 Sex Ratio of the Population ---------- 19
3.4 Average Household Size and Headship Rate of the population ---------- 19

Chapter IV Economically Active and Non-Active Population

4.1 Introduction ---------- 21
4.2 Measurement Approaches of the Economically Active Population ---------- 22
4.3 The Economically Active Population ---------- 24

4.3.1 Usual Status Approach ---------- 24
4.3.2 Current Status Approach ---------- 26

Chapter V Characteristics of the Currently Employed Population

5.1 Introduction ---------- 31
5.2 Employment to Population Ratio ---------- 31
5.3 Occupation and Industry ---------- 34

5.3.1 Occupation of the Employed Population 34
5.3.2. Industrial Division of the Employed Population 36
5.4 Employment Status 38
5.5 Sector of Economic Activities 41

Chapter V I Size and Characteristics of the Currently Unemployed Population

6.1 Introduction 43
6.2 Measurement of Unemployment 43
6.3 Levels and Distributions of Unemployment 44
6.4 Previous Work Experience and Duration of Unemployment. 48

Annex I Statistical Tables Presenting Detailed Results 51
Annex II Survey Questionnaire 371
Annex III Estimation Procedures of Total, Ratio and Sampling Errors 379

Annex IV Estimates and CV's for Selected Tables 383

LIST OF SUMMARY TABLES

Summary Table 2.1 Rural Domains 11
Summary Table 2.2 Major Rural Center Domain 12
Summary Table 2.3 Other Urban Centers Domain 13

SNNP - Southern Nations, Nationalities and Peoples'

TVET - Technical Vocational Educational Training

UBEUS - Urban Bi-annual Employment and Unemployment Survey.

CHAPTER I
BACKGROUND TO THE SURVEY

1.1 Introduction

Statistical information on all aspects of socio-economic activities is essential for the designing, monitoring and evaluation of development plans and policies as well as for measuring socio - economic growth. Labour force surveys are among the important sources of data for assessing the role of the population of the country in the economic and social development process. These surveys provide data on the main characteristics of the work force engaged or available to be engaged in productive activities during a given period and also its distribution in the various sectors of the economy. It is also useful to indicate the extent of available and unutilized human resources that must be absorbed by the national economy to ensure full employment and economic well being of the population. Moreover, it further provides an input for assessing the meeting of the Millennium Development Goals (MDGs) and the country's poverty reduction strategy framework (PASDEP-Plan for Accelerated and Sustained Development to End Poverty). The other broad objective of statistics on the labour force is for the measurement of relationship between employment, earnings and other social and economic characteristics of the economically active population for the purpose of formulating, monitoring and evaluation of employment polices and programs. Seasonal and other variations and changes over time in the size and characteristics of employment and unemployment could also be monitored using up-to-date information from labour force survey.

The Central Statistical Agency (CSA) has been providing labour force and related data at different levels and with varying details in their content. These include the 1976 Addis Ababa Manpower and Housing Sample Survey, the 1978 Survey on Population and Housing Characteristics of Seventeen Major Towns, the 1980/81 and 1987/88 Rural Labour Force Surveys, the 1984 and 1994 Population and Housing Census, and 2003 and 2004 Urban Bi-annual Employment Unemployment Survey. The 1996 and 2002 Surveys of Informal Sector and most of the household surveys undertaken by the Agency also provide limited information on the area. Still pieces of information in relation to that of employment can also be derived from small, large and medium scale establishment surveys.

Till the 1999 Labour Force Survey (LFS) there hasn't been a comprehensive national labour force survey representing both urban and rural areas. This 2005 LFS is the second in the series. Like the National Labour Force Survey of 1999, it covered both the urban and rural areas of all regions.

Exceptions are Gambella Region, where only the urban parts of the region are covered, Affar Region with only zone one and zone three were covered and Somali Region where only Shinile, Jijiga and Liben zones were covered.

This report presents the summary of findings of the survey together with statistical tables. The introduction and the summary report are organized into six chapters. Further more, statistical tables corresponding to the summary chapters are presented in Annex I.

1.2 Objectives of the survey

The 2005 National Labor Force Survey was designed to provide statistical data on the size and characteristics of the economically active and the non-active population of the country, both in urban and rural areas. The data will be useful for policy makers, planners, researchers, and other institutions and individuals engaged in the design, implementation and monitoring of human resource development plans, programs and projects. The specific objectives of this survey are to:

- generate data on the size of work force that is available to participate in production process;
- determine the status and rate of economic participation of different sub-groups of the population;
- identify those who are actually contributing to the economic development (i.e., employed) and those out of the sphere;
- determine the size and rate of unemployed population;
- provide data on the structure of the working population;
- obtain information about earnings from paid employment;
- identify the distribution of employed population working in the formal/informal enterprises; and
- provide time series data and trace changes over time.

1.3 Contents of the questionnaire

The survey is mainly aimed at providing information on the economic characteristics of the population aged 10 years and over, i.e., their activity status, employment, and unemployment situation. It has also covered detailed socio-demographic background variables such as age, sex, relationship to the head of household, migration, disability, literacy status, educational level, training and marital status.

The survey has used a structured questionnaire to produce the required data. Before taking its final shape, the draft questionnaire was tested by undertaking a pre-test. The pre-test was conducted in Addis Ababa, Sendoffs, Teji and their vicinity. Based on the findings of the pre-test, the content, layout and presentation of the questionnaire was amended comments and inputs on the draft contents of the survey questionnaire obtained from user-producer forum were also incorporated in the final questionnaire.

The contents of the questionnaire and methods used in this survey were further improved based on comment of international consultant. The consultancy was obtained as part of a joint World Bank/IMF project to improve statistics of countries in Anglo-phone Africa participating in the General Data Dissemination System (GDDS).

The questionnaire was organized in to five sections;

Section - 1 Area identification of the selected household: this section dealt with area identification of respondents such as region, zone, wereda, etc.,

Section -2 Socio- demographic characteristics of households: it consisted of the general socio-demographic characteristics of the population such as age, sex, education, status and type of disability, status and types of training, marital status and fertility questions.

Section - 3 Productive activities during the last seven days: this section dealt with a range of questions which helps to see the status and characteristics of employed persons in a current status approach such as hours of work in productive activities, occupation, industry, employment status, and earnings from employment. Also questions included are hours spent on fetching water, collection of firewood, and domestic chores and place of work.

Section - 4 Unemployment and characteristics of unemployed persons: this section focused on the size and characteristics of the unemployed population.

Section - 5 Economic activities during the last twelve months: this section covered the usual economic activity status (refereeing to the long reference period), number of weeks of employment /unemployment/inactive, reasons for inactivity, employment status, whether working in the agricultural sector or not and the proportion of income gained from non-agricultural sector.

The questionnaire used in the field for data collection was prepared in Amharic language. Most questions have pre-coded answers. A copy of the questionnaire translated to English is attached as Annex II of this report.

The survey employed two approaches in the measurement of the economically active population, namely the usual and the current status approaches. In the usual status approach, which refers to a longer time interval, data was collected about the main or usual economic activity of the population. On the other hand, the current status approach was based on a shorter reference period, and data was collected with reference to the current activity of the population. The usual status approach refers to the last twelve months prior to the date of interview. Similarly the current status approach using the short reference period refers to the last seven days prior to the date of interview.

1.4 Concepts and Definitions of Key Variables

Urban Center: - is generally defined as a locality with 2000 or more inhabitants. In the 1994 Population and Housing Census Cartographic work, however, for practical purposes an urban center includes the following regardless of the number of inhabitants.

i) All administrative capitals (Regional capitals, Zonal capitals and Wereda capitals),

ii) Localities with Urban Dweller's Association (UDAs) not included in (i),

iii) All localities which are not included either in (i) or (ii) above having a population of 1000 or more persons, and whose inhabitants are primarily engaged in non-agricultural activities.

Enumeration Area (EA): is a unit of land delineated for the purpose of enumerating population and housing units without omission and duplication. An EA in rural areas usually consists of 150-200 households, and on the other hand an EA in urban areas constitutes 150-200 housing units.

Household: Consists of a person or group of persons, irrespective of whether related or not, who normally live together in the same housing units or group of housing units and have common cooking and eating arrangements.

Head of household: is a person who economically supports or manages the household or for some reason of age or respect is considered as head by the other members of the household. It could be a male or a female.

Usual member of a household: a person is considered as usual members of a household if he or she is:

a) a person who continuously, that is, at least for six months live and have a common cooking and eating arrangements with the household; or

b) a person who is absent from the household at the time of the survey but his absence has not elapsed the six months criterion;

Housemaids, guards, baby sitters, etc... with no other dwelling and who were staying with the household at the time of the survey are considered as usual member of a household.

Definitions of other key concepts and core variables used in this survey are provided in respective chapters.

1.5 Limitations of the Survey

In the 2005 National Labour Force Survey, migrants were identified by asking a question on the length of continuous residence in the survey area. A detailed question like region or zone of previous residence, area of previous residence and reasons for migration were asked only to those recent migrants who moved out from their original place during the five years prior to the date of the interview. It was decided not to ask long time (5 years or more) migrants further question about their region or zone of previous residence assuming that they may not be well aware of the current structure of regional administration.

Lack of income data for self-employment is another limitation of this survey. It is believed that it is difficult to collect data on income from self-employment in a situation where most people do not want to give information about their actual income or earnings. Furthermore, specifically the currently available techniques developed for measuring income from self-employment are not refined and yet ambiguous. However, income data that would supplement the available information could be obtained from other sources like the result of the Household Income, Consumption and Expenditure Survey. Similarly, variables like ethnicity, religion and language were not included in this survey due to the fact that the number of cases obtained in this specific sample size was not found to be sufficient in order to provide reliable information.

1.6 Organization of the Report

This report contains six chapters. The first chapter covers background to the survey, where the objectives, the contents of the survey questionnaire, concepts and definitions of key variables, limitations of the survey and organization of the report, were discussed. Chapter II deals with the survey methodology, where scope and coverage, sample size and response rate, training of field

staff, organization of fieldwork, and data processing were dealt. The results of the survey are presented in the subsequent four chapters, that is, chapters III to VI. Chapter III deals with the size and socio-demographic characteristics of the population such as the distribution of population by age, sex, and education. Chapter IV presents data on the economic participation of the population aged ten years and over. Chapter V explores the characteristics of the employed population; finally Chapter VI focuses on the detailed characteristics of the unemployed population. Statistical tables corresponding to each of the summary chapters are presented in Annex I. Annex II and Annex III provide survey questionnaire and classification of highest grade completed, respectively. Estimation procedures of total, ratio and sampling errors and Estimates and CV's for selected Tables are presented in Annex IV and Annex V, respectively.

1.7 Training of Field Staff

The training program of enumerators, supervisors and other field and office staff was conducted in two stages. The first stage training was conducted at the head quarters of the Central Statistical Agency (CSA), in Addis Ababa for about seven days. The participants were selected from professionals and sub-professionals with long time experiences, branch office heads, and statisticians/ coordinators, who were to train enumerators and supervisors during the second stage of training conducted at the Branch Statistical Offices. The training was guided by an enumerator/ supervisor manual occupation and industry code book, which consist of detailed explanation of concepts, ideas and instructions on how to fill each entry in the questionnaire.

The second stage of training was organized for all field staff and was conducted at branch statistical offices. Those who were trained at the head office in turn gave similar training for enumerators and field supervisors for about nine days. The training consisted of classroom discussions on concepts and definitions, techniques of filing the questionnaire as well as mock-interview and one-day field practice followed by general discussion. The objectives of mock interview and field practice were twofold. First, it enabled to assess how well the theoretical class discussions were understood by all participants. The second objective was to examine the difficulty which would likely be encountered during actual fieldwork. The discussions were intended to exchange experiences among participants and pinpoint the areas of the survey questions that need more care and attention.

All the Branch Statistical Offices of the CSA participated in the survey undertaken, that is, in organizing the second stage of training, in deploying the field staff to their respective sites of assignment, and retrieving completed questionnaires and submitting them to the head office for data processing. They were also responsible in administering the financial and logistic aspect of the survey as well as field supervision within the areas of their assignment.

1.8 Organization of the Fieldwork

In order to carry out this survey with the desired level of quality, there was a need to organize a large staff that performs the various survey activities. The 25 Branch Statistical Offices of the Agency carried out the data collection operation. These offices have permanent and contract enumerators stationed in the selected enumeration areas. The data collection operation of the survey involved a total of about 1935 enumerators and about 412 field supervisors involved with an average supervisor-enumerator ratio of 1: 5.

The interviews were conducted by going from house-to-house using a structured questionnaire and relevant codebook. The data was collected from each sampled household and the respondent from whom the information collected was the head of the household or other responsible household member. Most of the enumerators were assigned to 2-3 sampled enumeration areas in which they could easily converse with the respondent's dialect. Interpreters were made available in cases where there is difficulty to converse. Data collection took place in March 2005.

In some of the sample sites the data collection was carried out in phases. That is, after completing the data collection in the selected enumeration area enumerators were shifted to another sample sites to carry out the same exercise. Field supervision was undertaken side by side with the data collection. During the survey data collection operation, close and regular supervision was undertaken at various levels. Spot checks, re-interviewing and a thorough scrutiny of filled-in questionnaires were applied to ensure that the data collection activities being carried out according to the given instruction. In addition to this, the statisticians in branch statistical offices and branch statistical office heads made supervision of the data collection operation.

CHAPTER II

SURVEY METHODOLOGY AND DATA PROCESSING

2.1 COVERAGE

The 2005 (1997 E.C) Labour Force Sample Survey covered all rural and urban parts of the country except all zones of Gambella Region excluding Gambella town, and the non-sedentary population of three zones of Afar & six zones of Somali regions. In the rural parts of the country it was planned to cover 830 Enumeration Areas (EAs) and 24,900 households. All planned EAs were actually covered by the survey; however, due to various reasons it was not possible to conduct the survey in 39 sample households. Ultimately 100.00 % EAs and 99.84% household were covered by the survey.

Regarding urban parts of the country it was initially planned to cover 995 EAs and 29,850 households. Eventually 100% of the EAs and 99.24% of the households were successfully covered by the survey.

2.2 SAMPLING FRAME

The list of households obtained from the 2001/2 Ethiopian Agricultural Sample Enumeration (EASE) is used to select EAs from the rural part of the country. For urban sample EAs on the other hand the list consisting of households by EA, which was obtained from the 2004 Ethiopian Urban Economic Establishment Census, (EUEEC) was used as a frame. A fresh list of households from each urban and rural EA was prepared at the beginning of the survey period. The list was then used as a frame for selecting sample households of each EAs.

2.3 SAMPLE DESIGN

For the purpose of the survey the country was divided into three broad categories. That is; rural, major urban center and other urban center categories.

Category I: **Rural:** - This category consists of the rural areas of 8 regions and two city administrations found in the country. Regarding the survey domains, each region or city administration was considered to be a domain (Reporting Level) for which major findings of the survey are reported.

This category totally comprises 10 reporting levels. A stratified two-stage cluster sample design was used to select samples in which the primary sampling units (PSUs) were EAs. Households per sample EA were selected as a second Stage Sampling Unit (SSU) and the survey questionnaire finally administered to all members of sample households

Category II:- Major urban centers:- In this category all regional capitals and 15 other major urban centers that had a population size of 40,000 or more in 2004 were included. Each urban center in this category was considered as a reporting level.

The category has totally 26 reporting levels. In this category too, in order to select the samples, a stratified two-stage cluster sample design was implemented. The primary sampling units were EAs. Households from each sample EA were then selected as a Second Stage Unit.

Category III: - Other urban centers: Urban centers in the country other than those under category II were grouped into this category. Excluding Gambella a domain of other urban centers is formed for each region. Consequently 7 reporting levels were formed in this category. Harari, Addis Ababa and Dire Dawa do not have urban centers other than that grouped in category II. Hence, no domain was formed for these regions under this category. Unlike the above two categories a stratified three stage cluster sample design was adopted to select samples from this category. The primary sampling units were urban centers and the second stage sampling units were EAs. Households from each EA were finely selected at the third stage and the survey questionnaires administered for all of them.

2.4 SAMPLE SIZE AND SELECTION SCHEME

Category I: - Totally 830 EAs and 24,900 households were selected from this category. Sample EAs of each reporting level were selected using Probability Proportional to Size (PPS) systematic sampling technique; size being number of household obtained from the 2001/2

Ethiopian Agricultural Sample Enumeration. From the fresh list of households prepared at the beginning of the survey 30 households per EA were systematically selected and surveyed. For the distribution of planned and covered number of samples from each domain see Summary Table 2.1 below.

Summary Table 2.1 Rural Domains

Region	Reporting Domain	EAs		Households	
		Planned	Covered	Planned	Covered
Tigray	Tigray-Rural	73	73	2190	2188
Affar	Affar-Rural	36	36	1080	1076
Amhara	Amhara-Rural	178	178	5340	5336

Addis Ababa	Addis Ababa-Rural	24	24	720	717
Dire Dawa	Dire Dawa-Rural	24	24	720	719
Total		830	830	24900	24861

Category II: - In this category 720 EAs and 21,600 households were selected. Sample EAs from each reporting level in this category were also selected using probability proportional to size systematic sampling; size being number of households obtained from the 2004 EUEEC. From the fresh list of households prepared at the beginning of the survey 30 households per EA were systematically selected and covered by the study. The table below (Summary Table 2.2) shows planned and covered EAs and households in each domain.

Summary Table 2.2 major urban centers Domain

Region	Reporting Domain	EAs		Households	
		Planned	Covered	Planned	Covered
Tigray	Mekele	23	23	690	679

	Sodo	20	20	600	600
	Arba Minch	20	20	600	598
Gambela	Gambela	15	15	450	443
Harari	Harar	23	23	690	678
Addis Ababa	Addis Ababa	200	200	6000	5933
Dire Dawa	Dire Dawa	25	25	750	740
Total		720	720	21600	21420

Category III:-127 urban centers, 275 EAs and 8,250 households were selected in this category. Urban centers from each domain and EAs from each urban center were selected using probability proportional to size systematic selection method; size being number of households obtained from the 2004 EUEEC. From the fresh listing of each EA 30 households were systematically selected and the study carried out on the 30 households ultimately selected. Summary Table 2.3 below shows the number of planned and sampled EAs and households by domain.

Summary Table 2.3 Other urban centers Domain

Region	Reporting Domain	EAs		Households	
		Planned	Covered	Planned	Covered
Tigray	Tigray Other Urban Centers	33	33	990	985
Affar	Affar Urban	20	20	600	595
Amhara	Amhara Other Urban Centers	56	56	1680	1675
Oromiya	Oromiya Other Urban Centers	78	78	2340	2329
Somalie	Somalie Urban	22	22	660	653
Benshangul Gumuz	Benshangul_Gumuz Urban	20	20	600	595

Gambela	Gambela Urban	-	-	-	-
Total		275	275	8250	8203

Including region urban and country domains, totally 45 reporting levels were formed.

Estimation procedures and standard errors & coefficients of variations for the estimates of selected variables are also presented in Annex I & Annex II, respectively.

2.5 Data Processing

During the fieldwork, the field supervisors, statisticians and the heads of branch statistical offices have checked the filled-in questionnaires and carried out some editing. However, the major editing and coding operation was carried out at the head office. All urban questionnaires were subjected to complete manual editing, while most of rural questionnaires were partially edited. All the edited questionnaires were again fully verified and checked for consistency before they were submitted to the data entry. This system of data processing was followed on the assumption that, there is less complication of activities in rural areas than urban centers.

After the data was entered, it was again verified using the computer edit specification prepared earlier for this purpose, the entered data were checked for consistencies and then computer editing or data cleaning was made by referring back to the filled-in questionnaire. This is an important part of data processing operation in attaining the required level of data quality. Consistency checks and re-checks were also made based on tabulation results. Computer programs used in data entry, machine editing and tabulation were prepared using the Integrated Microcomputer Processing System (IMPS).

CHAPTER III

SIZE AND SOCIO -DEMOGRAPHIC CHARACTERISTICS OF THE POPULATION

3.1 Introduction

The socio-demographic characteristics of the population presented in this chapter include age- sex distribution, educational attainment and training status. Some of the information like age and sex were collected from every member of the selected households. A lower age limit has been set for some of the population characteristics like, educational attainment and training. Accordingly, training status was asked for persons aged 10 years and above while education was asked for persons aged 5 years and over.

3.2 Size and Age-Sex Structure of the Population

Population size is one of the most important variables in human development planning. The structure of the population in terms of age and sex is also another crucial factor in demographic characteristics. The age-sex composition influences the labour force participation. It also is vital for making component and sectoral projection. Age and sex are not only important by themselves but are also useful for an in-depth analysis of other socio demographic and economic characteristics.

Summary Table 3.1 presents the distribution of population by sex and region, while Summary Table 3.2 shows the distribution of total population by age group, sex for urban and rural areas. The survey result showed that the total population of the country residing in conventional households in March 2005 to be 63,228,600 of which 31,281,391 (49.5 percent) are males and 31,947,209 (50. 5 percent) are females. These figures do not represent parts of Affar, Somalie, and Gambella regions.

As regards by place of residence the urban populations of the country make up 14.2 percent of the total population. The proportion of females in urban areas is slightly higher (about 53 percent) than their male counterpart.

According to the survey, the male population of regions varies from 50.7 percent in Afar Region to 46.2 percent in Addis Ababa City Administration. Whereas, the female population ranges from 53.8 percent in Addis Ababa City administration to 49.3 percent in Afar Region

Summary Table 3.1 Distribution of Total Population by Sex, Region and Place of Residence: 2005

Regions	Both sexes		Male		Female		Sex Ratio
	No	%	No	%	No	%	
Country	63,228,600	100.0	31,281,391	49.5	31,947,209	50.5	98.0
Urban	8,974,598	100.0	4,238,194	47.2	4,736,404	52.8	89.0
Rural	54,254,002	100.0	27,043,197	49.8	27,210,805	50.2	99.0
Regions							
Tigray	4,041,193	100.0	1,977,050	48.9	2,064,143	51.1	96.0
Afar	211,082	100.0	107,079	50.7	104,003	49.3	103.0
Amhara	16,292,538	100.0	8,071,288	49.5	8,221,250	50.5	98.0
Oromia	25,425,875	100.0	12,762,789	50.2	12,663,086	49.8	101.0
Somali	617,224	100.0	307,808	49.9	309,416	50.1	99.0
Benishangul-Gumuz	714,053	100.0	348,521	48.8	365,532	51.2	95.0
SNNP Region	13,283,030	100.0	6,472,066	48.7	6,810,964	51.3	95.0
Gambella	25,242	100.0	12,525	49.6	12,717	50.4	98.0
Harari	158,268	100.0	78,386	49.5	79,882	50.5	98.0
Addis Ababa City Admin.	2,145,417	100.0	991,852	46.2	1,153,565	53.8	86.0
Dire Dawa Adm. Council	314,680	100.0	152,028	48.3	162,652	51.7	93.0

The age distribution of the population of Ethiopia by five year age group is given in Summary Table 3.2 and graphically shown in figure 3.1-3.3. The age structure of the population of Ethiopia, which is typical for developing country, is characterized by much higher proportion at young ages and low proportion at older ages, reflecting the prevailing higher fertility rates (see Figure 1). As can be seen from summary Table 3.2, the population age less than 15 years make-up 47.1 percent of the total and those at old ages group (above 65 years old) constitute 3.2 percent. The proportion of the population ages 15-64 years, constitute 49.6 percent of the total population.

The age- sex composition showed variation by urban rural residence. The age- sex pattern of the rural population resembles that of the country. The age- sex pattern for urban population, however, is different from that of the rural area, in that the base is not widening. The percentage of both the males and the females in the age group 15–49 years is found to be unusually high. This would have happened due to age shift and partly due to migration of students from rural to urban areas.

Summary Table 3.2 Distribution of Total Population by Age group, Sex, Sex Ratio, Urban and Rural Areas: 2005

Age Group	Urban + Rural				Urban				Rural			
	Total	Male	Female	Sex Ratio	Total	Male	Female	Sex Ratio	Total	Male	Female	Sex Ratio
All ages	63,228,598	31,281,390	31,947,208	98.0	8,974,597	4,238,194	4,736,403	89.0	54,254,001	27,043,196	27,210,805	99.0

Figure 3.1 Age-Sex Distribution of Population, Country Total :2005

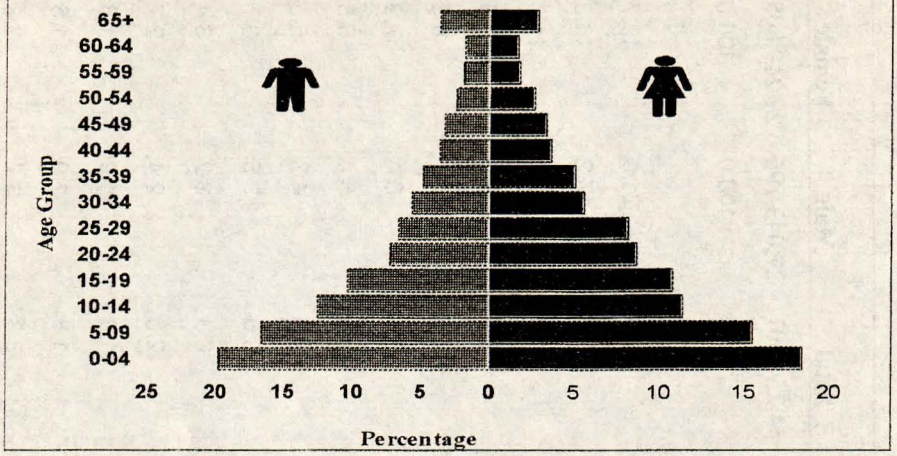

Figure 3.2 Age-Sex Distribution of Population, Country Urban :2005

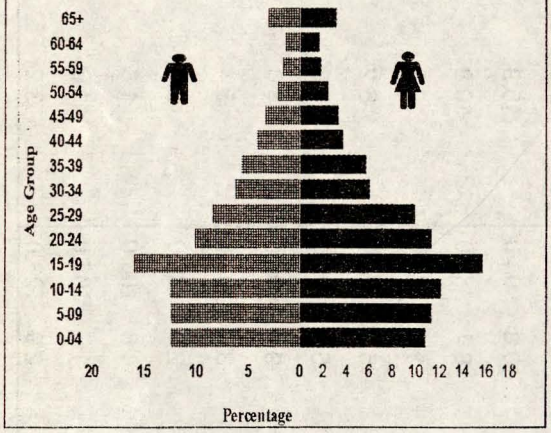

Figure 3.3 Age-Sex Distribution of Population, Country Rural :2005

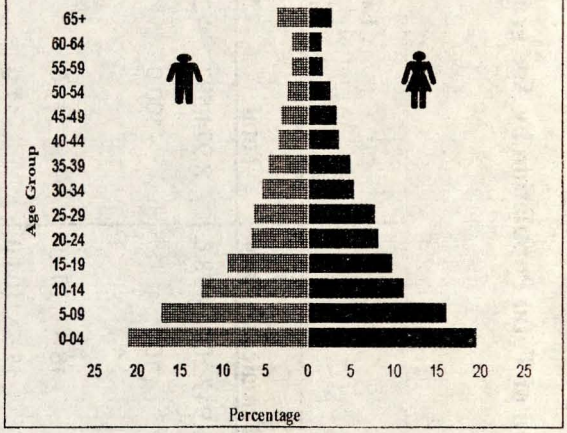

3.3. Sex Ratio of the Population

The sex composition of a population holds a position of prime importance in demographic studies. Moreover, socio-economic development planning, such as planning of community institution and services particularly health services and planning of production and sales of goods and services require data on sex composition of the population. Sex composition can be described by a serious of sex ratio for various categories of a population.

Sex ratio is defined as the number of males per 100 females. The sex composition has an effect on economic activities through the relative size of the working population. Assuming no selective migration, sex ratio in the general population is expected to be 100. The result presented in Summary Table 3.2 indicates the overall sex ratio is 98, showing excess of females over males, which may due to higher number females migrant in that area compared to males. As can be seen from the data at country level, sex ratio of over 100 is reported for those below the age group 15-19 and above the age group 50-54 years. Sex ratio of below 100 is observed between the age group 15-19 years to 50-54 years. In the cases of urban areas the overall sex ratio is 89 and, showing substantial sex imbalanced.

3.4 Average household size and Headship Rate of the Population

Household characteristics affect the social and economic well being of the members of households. Large household size is associated with crowding, which can lead to unfavorable health and economic conditions. Summary Table 3.3 shows the average household size by sex of head of household and headship rate at country level. The overall average household size reported is 4.5 persons at national, about 4.6 persons in rural areas. In the urban parts of the country, the average number of members of households is estimated to be about four persons. The highest average household size (5 persons) is recorded in Oromia and SNNP regions. In all regions, average household size of male-headed households is higher than that of female-headed households. The headship rate of males exceeds the females at country level and follows the same pattern in all regions.

Summary Table 3.3 Average Household Size of Population of Regions by Sex of Head of Household, Headship Rate and Place of Residences: 2005

Regions	Total			Male Headed			Female Headed

CHAPTER IV

ECONOMICALLY ACTIVE AND NON ACTIVE POPULATION

4.1 INTRODUCTION

This chapter presents some of the major findings of the survey on the economically active and non-active population. The data on economically active population relates to that of the size and distribution of the work force engaged or available to be engaged in the production of economic goods and services during a given reference period. Such data together with other labour market information would be of a springboard for the formulation, monitoring and evaluation of policies and strategies on human resource development.

In terms of activity status, the survey divided the population aged ten years and over into economically active and inactive categories. The lower age limit was fixed at ten years to allow comparisons with other countries and to incorporate information about those children, who start taking part in many types of economic activities at young ages.

Economic activity in the survey was defined in terms of production of goods and services that fall within the United Nations System of National Accounts (SNA) production boundary (ILO, 1990). Hence, in the 2005 National Labour Force Survey, economic activity is defined as work, which involves the production of goods and/or services for sale or exchange and production of certain products for own consumption. According to the above general definition, economic activity covers production of goods and services intended for sale on the market, production of other goods and services such as government activities; production and processing of primary products (agriculture, hunting, fishing, forestry and logging; and mining and quarrying) for own consumption, processing of primary products by the producers themselves, production of other commodities where part of it is sold on the market; and own account construction and fixed asset formation (expected life use of one year or more). Such economic activities could be performed for an individual, family or private enterprise, government establishment or public organization. The remuneration may be on daily, weekly, monthly, yearly or contract basis. On the other hand, unpaid household chores such as preparing food, cleaning the house, taking care of children or collecting firewood for

own consumption is not considered in the category of economic activity. Similarly, unpaid community and volunteer services are classified as non-economic activities.

All persons aged ten years and over who were productively engaged or available to be engaged during the reference period were included as economically active persons. In other words, the economically active population comprises all persons aged ten years and over who were employed or unemployed in the reference period. The complements, i.e., those who were neither engaged nor furnish their labour constitute the economically inactive population.

4.2 Measurement Approaches of the Economically Active Population

The economically active population comprises all persons either sex who furnish the supply of labour for the production of economic goods and services as defined by UN System of National Account (SNA) balances during a specified reference period (UN, 2000).

The two approaches, i.e., usual and current status approaches used for measuring the economically active population were employed in the survey. In the usual status approach, all persons aged ten years and over were asked to report whether they were engaged in productive activities or available to be engaged at work at least some time during the last twelve months prior to the date of interview. Those persons who have been engaged or available to be engaged at work for sometime during those months were asked the number of weeks they spent on each activity status month by month. Based on this information, persons were categorized as employed and unemployed on the basis of majority rule, i.e., persons who were working and/or available to work for at least half of the total number of weeks (twenty five weeks) during the twelve months were classified as economically active. Among the economically active, those who spent at least half of their active period at work were categorized as employed. On the other hand, persons were categorized as unemployed if their availability period is greater than the employment period.

It follows that, those who neither engage nor available to work in productive activity during most of the reference period due to homemaking, education, illness, etc, are classified as the economically inactive. The economically inactive persons were further asked to report why they were not so engaged or available to be engaged during most of the six months period.

The current status approach measures the activity status in relation to a short reference period, i.e., the seven days prior to the date of the interview. In this approach a series of inquiries related to engagement in economic activity, seeking and availability to work, reason for not being available to work ...etc., were administered to determine the economic activity status of the population aged ten years and over. These questions are used to divide the population aged ten years and above into the three mutually exclusive categories: employed, unemployed and not in the labour force. If a person experienced a combination of the three status in a week, priority rule is applied in favor of employment over the other two status and unemployment over inactive. As in the case of usual status approach the employed and the unemployed populations together make up the labour force or the currently active population. The third category, that is, those not in the labour force, represented the population not currently active.

The employed population based on the current activity status approach consisted those who were engaged in productive activity at least for four hours during the seven days prior to the date of the interview. Persons who had regular jobs, or business, or holdings to return to but temporarily absent from work (that is, not at work or worked less than four hours) for various reasons were also included as employed persons.

For a person to be considered as absent from work, he/she must have formal attachment to the job. Employees who were fully/partly paid during their absence, those who will return to their work when relieved from their problem, and those who were not absent for a total of two months are considered to have formal job attachment. Self-employed persons are considered to have formal job attachment; if their place of work/ business is not closed down during their absence from work or they are sure it will be re-opened/continue to function if it is closed down.

The unemployed population, which will be defined in detail in Chapter VI, consists of persons without work but who are willing /available and ready to work if any job was found during the one month period after the date of the interview.

4.3 The Economically Active Population

This section presents the size of the economically active and non-active population as measured based on usual and current status approaches. Economic activity rate, which is also called the participation rate of a population, is also presented along with the size of economically active population. The economic activity rates are good indicator about the economic condition of an area at a given period of time. The rate is computed as the percentage of the economically active population over the total of the active and the inactive population.

4.3.1 Usual Status Approach

The size of the active and non-active population during both the last twelve months (usual status approach) and the last seven days (current status approach) along with the corresponding activity rates are presented in Summary Table 4.1-4.2. Accordingly, the size of the active population of the country in the usual status approach showed 32,158,392. The data, thus, resulted in an activity rate of 78.4 percent. With regard to the difference by sex, the activity rate of males is found to be higher (86.1 percent) than their female counterparts (71.2 percent).

The usual activity rate is also broken down by some background variables (see Summary Table 4.1). The activity rate by place of residence shows noticeable difference between rural and urban areas (82.6 percent in rural compared to that of 57.7 percent in urban areas). The usual activity rates for the literate and illiterate populations were 72.1 and 82.2 percent, respectively. The literate showed lower activity rate than the illiterate because part of the former group might be students who stay in school and can not be engaged or furnish their labour for production of goods and services. As can be seen from the table, at country level, non-migrants seems to have higher activity rates (79.4 percent) than the migrants (65.2 percent).

Summary Table 4.1: Distribution of Total Population, Active Population, Activity Rate Aged 10 Years and Over by Sex and Some Background Variables, Country Level (Usual Status Approach): 2005

Background Variables	Active Population			Activity Rate		
	Total	Male	Female	Total	Male	Female
Country Total	32,158,392	17,133,403	15,024,989	78.4	86.06	71.18
Place of Residence						
Urban	3,964,380	2,051,147	1,913,233	57.73	64.39	51.97
Rural	28,194,012	15,082,256	13,111,756	82.56	90.19	75.23
Literacy Status						
Illiterate	21,001,511	9,285,491	11,716,020	82.23	92.01	75.84
Literate	11,156,879	7,847,909	3,308,970	72.08	79.95	58.45
Migration Status						
Migrants	1,902,425	1,023,600	878,825	65.2	72.61	58.28
Non-Migrants	30,255,967	16,109,802	14,146,165	79.41	87.08	72.17
Regions						
Tigray	2,010,035	1,029,712	980,323	74.93	81.65	68.96
Affar	97,264	58,298	38,966	67.81	80.62	54.79
Amhara	8,899,386	4,791,035	4,108,351	81.52	89.24	74.05
Oromia	12,582,028	6,790,841	5,791,187	78.64	86.26	71.26
Somali	270,019	152,633	117,386	68.94	79.39	58.87
Benishangul-Gumuz	351,887	183,666	168,221	76.05	83.11	69.61
SNNP	6,679,288	3,457,569	3,221,719	80.8	88.01	74.28
Gambella	8,370	4,649	3,721	44.34	50.1	38.76
Harari	69,397	38,092	31,305	62.65	71.85	54.2
Addis Ababa City Admin.	1,053,257	555,704	497,553	58.49	67.57	50.86
Dire Dawa Adm. Council	137,460	71,202	66,258	61.15	66.33	56.41

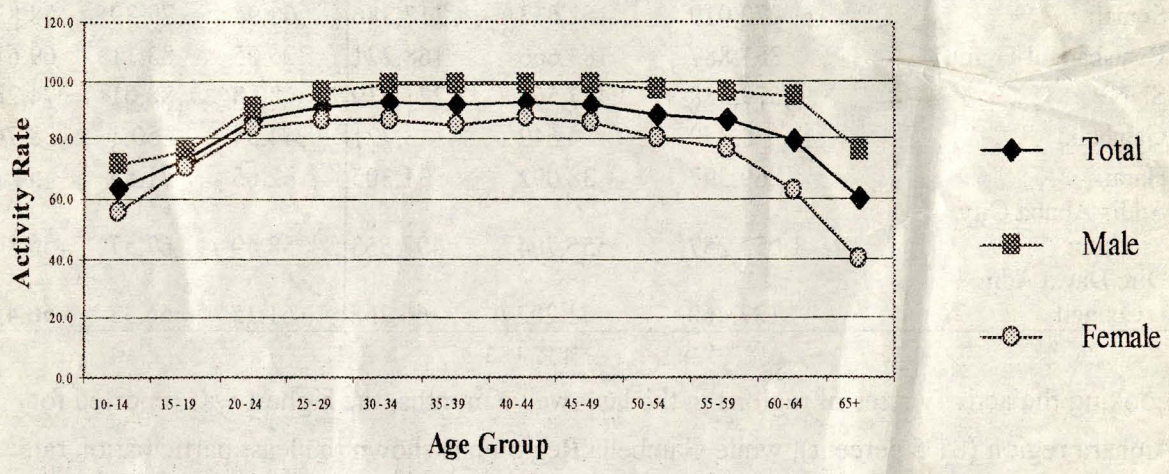
Looking the activity rates of regions in the last twelve months, the highest was reported for Amhara region (81.5 percent), while Gambella Region has shown the least participation rate (44.3 percent) compared to other regions. In all regions, economic participation rate of the males is higher than that of the females. The difference in activity rate between males and female is highest in Affar Region.

4.3.2. Current Status Approach

According to this survey, the total labour force of the country as measured using current status approach is estimated to be 33,069,793 (see Summary Tables 4.2). This gives an activity rate of 80.7 percent. As in the case of usual approach, economic participation rate of the males is higher (86.8 percent) than that of the females (74.9 percent).

Regarding the relationship between broad age group and activity rate, the data in the table depicts a curvilinear association (see Figure 4.1). That is, low participation rate at lower age groups (10-19 years) and old age group (65 and over) and high participation rate in the productive age group (25-64 years). Higher proportion of male than females tends to join the labour force at all age groups. The higher involvement of females in the housekeeping activities, which is considered to be non-productive, may be accountable for the lesser activity rates among them.

Figure 4.1 Age Specific Activity Rate by Sex, Country Total:2005 (Current Status Approach)



Summary Table 4.2: Distribution of Total Population, Active Population, Activity Rate Aged 10 Years and Over by Sex and Some Background Variables, (Current Status approach): 2005

Background Variables	Active Population			Activity Rate		
	Total	Male	Female	Total	Male	Female
Country Total	33,088,793	17,288,179	15,800,614	80.7	86.8	74.9
Place of Residence						
Urban	4,340,269	2,131,022	2,209,247	63.2	66.9	60.0
Rural	28,748,524	15,157,157	13,591,367	84.2	90.6	78.0
Broad Age Group						
10-14	4,836,335	2,790,397	2,045,938	63.8	71.1	55.9
15-24	9,237,841	4,493,918	4,743,923	78.9	82.0	76.1

Illiterate	21,553,076	9,337,320	12,215,756	84.4	92.5	79.1
Migration Status						
Migrants	2,031,583	1,042,697	988,886	69.6	74.0	65.6
Non-Migrants	31,057,209	16,245,481	14,811,728	81.5	87.8	75.6
Regions						
Tigray	2,074,066	1,045,344	1,028,722	77.3	82.9	72.4
Affar	105,067	59,468	45,599	73.3	82.2	64.1
Amhara	9,084,487	4,824,306	4,260,181	83.2	89.9	76.8
Oromia	12,930,037	6,839,430	6,090,607	80.8	86.9	74.9
Somali	289,279	157,710	131,569	73.9	82.0	66.0
Benishangul-Gumuz	360,947	186,040	174,907	78.0	84.2	72.4
SNNP	6,838,598	3,477,155	3,361,443	82.7	88.5	77.5
Gambella	9,676	4,835	4,841	51.3	52.1	50.4
Harari	76,744	39,382	37,362	69.3	74.3	64.7
Addis Ababa City Admin.	1,161,525	578,485	583,040	64.5	70.3	59.6
Dire Dawa Adm. Council	158,366	76,023	82,343	70.5	70.8	70.1

As in case of usual status approach, higher current activity rate is reported for rural areas the highest (84.2 percent) compared to that of urban areas (63.2 percent). Again, the illiterates have higher participation ratio (84.4) percent than the literate population (74.5 percent). As can be seen from the table, at country level, non- migrants reported to have higher activity rates (81.5 percent) than the migrants (69.5 percent).

In the current status approach, Amhara and SNNP regions have shown the highest participation rates compared to other regions, while Gambella Region has registered the least participation rate 44.3 percent (See Summary Table 4.2). Similar regional pattern was observed among both the males and the females.

Economic participation rate based on the usual and current activity rate for selected urban centers is shown in Summary Table 4.3. The highest and the lowest economic participation rate in the current status approach is registered for Bahirdar town (66.3 percent), and Gamebella town (51.3 percent), respectively. The corresponding figures in the usual status approach are reported for Deberziet town (64.0 percent) and for Gamebella town (48.9 percent). In all urban centers, an activity rate among the males is higher than that of the males.

Summary Table 4.3 Economic Activity Rate of Population of the Selected Urban Centers Aged Ten years and Over by Sex, Current and Usual Status Approach: 2005

Selected Urban Centers	Activity Rate					
	Current Status			Usual Status		
	Total	Male	Female	Total	Male	Female
Total	63.4	68.4	59.1	59.6	66.2	54.1
Mekele	58.1	63.9	53.6	53.1	60.1	47.7
Asayita	61.5	68.1	56.0	57.2	68.1	48.0
Gonder	58.0	63.1	54.4	55.5	62.9	50.2
Dessie	59.3	63.2	56.0	55.3	60.8	50.5
Bahir Dar	66.3	68.2	64.8	63.9	66.8	61.6
Jimma	61.3	66.6	56.7	59.2	66.0	53.4
Debrezeit	66.2	73.6	60.4	64.0	72.3	57.4
Nazareth	63.1	69.4	58.6	60.1	67.4	54.7
Jijiga	53.7	61.6	46.5	51.7	61.4	42.8
Asosa	65.0	73.8	57.2	60.7	71.3	51.2
Awasa	62.0	65.6	58.7	59.1	63.2	55.4
Gambella	51.3	52.1	50.4	48.9	50.2	47.5
Harar	62.1	65.0	59.5	58.4	62.6	54.8
Addis Ababa	64.4	70.2	59.5	60.3	67.6	54.2
Dire Dawa	65.8	64.2	67.2	61.0	62.4	59.8

Table 4.4 presents the current economic activity rate of selected countries. The activity rate of Ethiopia, which is 80.7 percent, is one of the highest as compared to the rates observed in countries considered in the table For instance, in 1995 Ghana and Kenya, registered participation rats of 81.9 percent and 81.7 percent, respectively.

Summary Table 4.4 Current Activity Rte of Some Selected Countries

Country	Activity Rates			
	Year	Both Sexes	Male	Female
Ethiopia	2005	80.7	86.8	74.9
Kenya	1995	81.7	89.1	74.4
Zambia	1995	75.4	86.1	65.6
Zimbabwe	1999	71.1	78.6	64.5
Cameroon	1995	66.8	86.0	48.3
Botswana	1998	57.9	70.3	47.7
Lesotho	1997	61.7	69.2	56.2
Namibia	1995	66.8	80.7	53.7
Ghana	1995	81.9	82.5	81.4
Nigeria	1995	66.8	86.8	47.7
Algeria	1996	44.9	77.5	11.8
Egypt	1999	47.5	73.7	20.7
Libya	1995	52.3	78.2	22.4
Morocco	1999	54.4	79.3	30.3
Sudan	1996	51.3	74.7	29.1
Brazil	2001	67.0	81.0	54.1
Malaysia	2000	65.5	83.3	46.7
China	1995	79.8	85.6	73.7
Australia	2002	63.2	71.5	55.2
Czech Republic	2002	59.9	69.4	51.0

Source: ILO (2003), Key Indicators of the Labour Market Country profile.

As can be observed from the Table 4.5, total activity rate appears to follow an increasing trend during the last five years; however, rural activity rate increment is higher than the counterparts. According to the 1994 Population and Housing census result, activity rate of urban Ethiopia reveals the lowest as compared to other surveys. That is to say that there is an increasing trend of activity rate during the last decades in both urban and rural areas of Ethiopia.

Summary Table 4.5 Trends in Activity Rate (Current Status Approach)

Year	Urban + Rural			Urban			Rural		
	Both Sexes	Male	Female	Both Sexes	Male	Female	Both Sexes	Male	Female
1994	-	-	-	50.0	62.0	39.1	-	-	-
1999	75.14	83.79	66.88	65.87	70.81	61.77	76.94	86.10	67.95
2003	-	-	-	57.9	62.9	53.6	-	-	-
2004	-	-	-	55.2	61.2	49.9	-	-	-

CHAPTER V

CHARACTERISTICS OF THE CURRENTLY EMPLOYED POPULATION

5.1 Introduction

The employed population in the current status approach consists of those who were engaged in productive activity for four hours or more during the seven days prior to the date of the interview. Persons who had regular jobs or business or holdings to return to but were absent from work (i.e., not at work or worked less than four hours) for various reasons were also considered as employed persons. In this chapter, some of the characteristics of the currently employed population will be presented.

5.2 Employment to Population Ratio

Employment to Population Ratio is calculated as a percentage of total employed to that of the total working age population. According to the data in Summary Table 5.1, the employment to population ratio for the country is reported to be 76.7 percent. This means about 77.0 percent of the total population of the country aged 10 years and over were working during the reference period. The employment to population ratio for male is 84.7 percent, which is substantially higher than the ratio for the females (69 percent).

The proportion employed in rural areas (82 percent) is substantially higher than urban areas (50.2 percent). The illiterate had higher working population (81.4 percent) as compared to literate population (68.7 percent). The non-migrant reported significant proportion (77.8 percent) than that of migrant population (61.7 percent).

Apparently, in the 2005 NLFS the highest employment to population ratio was observed for Amhara and SNNP regions, (80.5 and 79.8 percent, respectively. The lowest employment to population ratio was recorded for Harari Region (38.1 percent).

Summary Table 5.1 Distribution of Employed to Population Ratio Aged 10 Years and Over by Sex, Place of Residence, Literacy's Status, Migration Status and Regions: 2005

Background Variables	Total Population			Total Employed Population			Employment to Population Ratio		
	Total	Male	Female	Total	Male	Female	Total	Male	Female
Country	41,018,088	19,908,690	21,109,398	31,435,108	16,860,264	14,574,844	76.6	84.7	69.0
Urban	6,867,045	3,185,720	3,681,325	3,446,092	1,838,313	1,607,779	50.2	57.7	43.7
Rural	34,151,043	16,722,970	17,428,073	27,989,016	15,021,951	12,967,065	82.0	89.8	74.4
Literacy Status									
Literate	15,477,691	9,816,315	5,661,376	10,638,271	7,615,191	3,023,080	68.7	77.6	53.4
Illiterate	25,540,397	10,092,375	15,448,022	20,796,836	9,245,072	11,551,764	81.4	91.6	74.8
Migration Status									
Migrant	2,917,645	1,409,646	1,507,999	1,800,633	982,153	818,480	61.7	69.7	54.3

Harari	110,767	53,014	57,753	63,845	35,361	28,484	57.6	66.7	49.3
Addis Ababa City Admin.	1,800,669	822,427	978,242	799,562	448,258	351,304	44.4	54.5	35.9
Dire Dawa Adm. Council	224,796	107,348	117,448	120,453	64,951	55,502	53.6	60.5	47.3

Summary Table 5.2 presents employment to population ratio for selected urban centers included in this survey. Overall these towns register employment to population ration of 44.8 percent. The highest ratio is observed in Bahir Dar town (53.9 percent) closely followed by Asosa town (52.8 percent). The lowest employment to population ratio, that is, 34.7 percent is recorded for Jijiga town. The male - female difference in employment to population ration is highest for Asosa town (32 percentage point difference). The lowest male-female difference in this regard is observed in Dire Dawa and Mekele towns, amounting to 11.2 and 11.8 percentage points, respectively.

Summary Table 5.2 Distribution of Employed Population of Selected Urban Center Aged 10 years and Over by Sex and Employment to Population Ratio: 2005

Background Variables	Total Population			Total Employed Population			Employment to Population Ratio		
	Total	Male	Female	Total	Male	Female	Total	Male	Female
Total	2,874,056	1,303,758	1,570,298	1,287,600	707,039	580,561	44.8	54.2	37.0

5.3 Occupation and Industry

Responses of the type of occupation and industry of employed persons were coded in the field and further verified at the head office during data editing and coding stage, using the National Occupation and Industry Classification (NOIC) code book. The NOIC codes were adopted from the International Standard Classification of Occupation (ISCO-88) and International Standard Industrial Classification (ISIC, 1990), taking into account the prevailing national socio-economic conditions.

In this survey, the currently employed persons were asked about the type of main activity (occupation) and major product or service of the establishment or industry in which they were engaged during the survey reference period. For the employed persons engaged in multiple activities, the activity that took the largest share of the time used was taken as the main type of activity. The questions used to identify the type of occupations and industries were left open ended so that the data can be filled-in the questionnaire with complete description in the field.

5.3.1 Occupation of the Employed Population

Summary Table 5.3 presents the percentage distribution of the currently employed population aged ten years and over by sex, major occupational group urban and rural areas at country level. From the data in the table, it can be seen that, at the country level the highest proportion (42.8 percent) of employed persons are engaged in elementary occupations. Next to this occupational group are persons engaged in skilled agricultural and fishery occupation, constituting 40.5 percent of the total employed persons. Crafts workers and service/market sales workers make up about 7.0 percent and 6.7 percent of the country's total employed persons, respectively.

Legislators, senior officials and managers; professionals; technicians and clerks, which are some times referred to as "white collar occupations" make up insignificant proportion of the country's total employed persons. They constitute altogether only 2.4 percent of the country's employed persons. Since the majority (86 percent) of the population of the country is living in rural areas, the distribution of most phenomenon in the country heavily depend on the distribution of the phenomena

Summary Table 5.3: Currently Employed Population Aged Ten Years and Over by Sex, Major Occupational Groups, Urban and Rural Areas: 2005

Urban/Rural and Sex	Total Employed Person		Legislator Senior Officials & Managers	Professional	Technical and Associate Professionals	Clerks	Service workers, Shop and Market sales	Skilled agricultural and Fishery	Crafts and related trades	Plant, Machine Operators & Assemblers	Elementary Occupation	N.S.
	No.	%

Female	12,967,065	100.0	0.0	0.1	0.3	0.1	7.4	25.1	8.3	0.2	58.5	0.0

observed in rural areas. The picture for country urban is slightly different, where service sectors took the leading position with a percentage share of 24.8 percent, closely followed by elementary occupations and craft workers (with percentages of 24.6 and 22.6 percent, respectively). Unlike rural areas, the so-called white-collar occupations, specially, technicians and associate professionals, and clerks have, relatively, greater proportions in urban areas.

A further look at these table shows that elementary occupations were occupied by a relatively greater proportion of females than males, while the reverse holds true for skilled agricultural and fishery occupation group in rural areas.

5.3.2 Industrial Division of the Employed Population

Summary Tables 5.4 present the percentage distribution of currently employed population aged ten years and over by major industrial divisions, sex, urban and rural areas of the country. Significant shares of employed persons of the country were absorbed by agricultural activities 80.2 percent. Similarly the majority of the total employed persons 88.5 percent in rural areas were engaged in agricultural activities. The share for males in this sector is higher 92.7 percent while that of females is 83.6 percent.

On the other hand, 21.8 percent of the employed persons in urban areas were engaged in the wholesale and retail trades, followed by manufacturing (14.3 percent) and hotel and restaurant (10.8 percent). Higher proportion of females than males in urban areas participated in the wholesale and retail trade, manufacturing and hotel and restaurant industrial divisions compared to male counter part. The gap is particularly wide in hotel and restaurant industry - 3.4 percent for males and 19.2 percent for females.

Summary Table 5.4: Currently Employed Population Aged Ten Years and Over by Sex, Major Industrial Divisions, Urban and Rural Areas (Country Total): 2005

5.4 Employment Status

In this labour force survey, in addition to the type of main activity, the currently employed persons were asked about the status of employment in the main activity. Employment status of a person was defined in-terms of his/her ownership or degree of commitment to the job. In this survey, employment status of a person was classified into employer, paid employee, self employed, unpaid family worker, member of producers' cooperative, apprentice, and 'other' categories. Paid employees were further disaggregated into government employees, government parasitatal employees, private organization employees, NGO employees, domestic employees and other paid employees.

The percentage distribution of employed population by employment status, sex, urban and rural areas, for the country is presented in Summary Table 5.5. At country level, (40.9 percent) of the employed population were self employed next to unpaid family workers (50.3 percent). The paid employee altogether constituted only about 8.0 percent of the total working population (this was made up of 2.6 percent government employees, 0.6 percent government parasitatal employees, 2.9 percent private organization employees, NGO employees 0.5 percent, domestic employees 1.2 percent and 0.2 percent other paid employees). The share of employers, apprentices and member of cooperatives among the total employed population was found to be negligible. The data in summary Table 5.5 further show that self-employment at country level was the dominant employment status among the male (54.8 percent), while the majority of females employed were found in unpaid family workers (68.5percent).

In rural areas, the percentages of the unpaid family workers make up (54.6 percent) which is more than half of the employed population. This is followed by a sizable number of self-employed persons (41.0 percent) and small proportion of paid employees (3.6 percent). The picture in urban areas is, however, different. Here, the

proportion of unpaid family workers is relatively lower (about 15.0 percent), while the proportion of paid employees is considerably high (42.8 percent). In urban areas male paid employed are relatively covers higher percentage share, that is, 46.3 percent than that of females 38.8 percent, while more percentage of females than males found in self employment which is 42.0 percent for females against 38.9 percent for males. Also, the majority of female in rural areas working in as unpaid family worker 74.7 percent, where as rural males were dominant in self employment 56.7 percent.

Summary Table 5.5: Distribution of Currently Employed Population Aged Ten Years and Over by Sex, Employment Status, Urban and Rural Areas : 2005

Urban/Rural and Sex	Total Employed Population		Employment Status

5.5 Sector of the Economic Activities

For statistical purpose, the informal sector is considered as a group of production units, which according to the definitions and classification provided in the United Nation System of National Accounts (Rev.4), form part of the household sector as household enterprises or, equivalently, unincorporated enterprises owned by households. The informal sector is defined irrespective of the kind of work place where the productive activities are carried out, the extent of fixed capital used, the duration of the enterprise and its operation as main or secondary activity of the owner.

This survey includes questions to identify the sector of economy in which employed persons are engaged as their main activity. The information collected refers to only part of the employed population. That is, persons engaged in subsistence farming and those who work in private households were exempted from the analysis of the sector of economy.

Employed persons whose employment status was government employee, government parasitatal employee, NGOs employee and members of cooperatives were treated as being working in the formal sector. Other employed persons whose employment statuses of main activities were employer, private organization employee, self-employed, and apprentice were asked whether the business/enterprise they were engaged in:

a) has ten or more workers,
b) is keeping book of account that show monthly income statement and balance sheet and
c) is licensed.

Based on the response to these three conditions, classification on the sector of economy was made as: formal, informal, or 'not-identified'. Employed persons who satisfy at least one of the above conditions were considered as employed in the formal sector. For those who respond "no" for all of the three questions, the activity was taken as informal. Persons who doesn't know the situation about their main activity/business/ enterprise with respect to the above questions, were labeled as "not-identified"

Summary Table 5.6 Proportion of Working Population of Selected Urban Centers in the Informal Sector Aged Ten Years and Over by Sex: 2005

Selected Urban Centers	Total Working Population			Proportion of Working Population in the in formal Sector		
	Total	Male	Female	Total	Male	Female
Total	1,287,600	707,039	580,561	26.2	23.7	29.2
Mekele	54,896	27,246	27,650	31.0	18.8	43.1
Asayita	5,016	2,883	2,133	34.2	26.1	45.2
Gonder	45,729	22,653	23,076	38.7	32.3	45.0
Dessie	32,540	17,990	14,550	38.8	37.6	40.3
Bahir Dar	57,361	28,240	29,121	22.3	19.9	24.6
Jimma	37,541	20,933	16,608	27.9	23.8	33.0
Debrezeit	29,350	16,145	13,205	30.5	24.8	37.6
Nazareth	58,113	29,343	28,770	35.0	32.1	37.9
Jijiga	20,603	12,943	7,660	39.3	36.5	44.0
Asosa	8,607	5,325	3,282	27.7	24.9	32.2
Awasa	40,959	23,740	17,219	28.2	25.8	31.5
Gambella	7,196	4,147	3,049	29.6	15.8	48.3
Harar	28,247	15,140	13,107	35.5	26.4	46.0
Addis Ababa	785,660	440,121	345,539	21.6	20.9	22.6
Dire Dawa	75,782	40,190	35,592	41.3	37.3	45.8

Summary Table 5.6 presents proportion the of urban employed population of the country who are engaged in the informal sector. According to the survey result, at urban areas of country level a totalof 1,287,600 people were working in the informal sector, making up 26.2 percent of the total employment. The highest proportion of employed population who work in the informal sector was recorded for Dire Dawa town (41.3 percent), followed by Jijiga town (39.3 percent), Dessie town (38.8 percent) and Gonder town (38.7 percent). The lowest proportion; in this respect, was registered for Addis Ababa City Administration (21.6 percent). A higher proportion of females than males are engaged in the informal sector in all regions. The discrepancy of the proportion of female working from that of male in the informal sector is relatively higher in Mekele town (24.3 percentage points) and in Harar and Asayita (19.6 and 19.1 percentage point, respectively).

CHAPTER VI

SIZE AND CHARACTERISTICS OF THE CURRENTLLY UNEMPLOYED POPULATION

6.1 Introduction

This chapter presents the size and rates of unemployment classified into regional levels by age group and sex. In addition, the pattern of unemployment in relation to educational attainment, work experience and duration of unemployment...etc., will be assessed briefly. Even though, information regarding unemployment was collected using the current and usual measurement approaches the results presented in this chapter refers only to the current activity status approach.

6.2 Measurement of Unemployment

The measurement of unemployment is based on the following three criteria that must be satisfied simultaneously; "without work", "currently available for work" and "seeking work" (ILO, 1983). The standard definition of unemployment that is based on the "seeking work" criterion refers to take specific steps in specified period to seek paid employment or self employment. The specific steps may include registration at a public or private employment exchange, application to employers, checking at worksites, farms, factory gates, market or other assembly places, placing or answering newspaper advertisements, seeking assistance of friends or relatives, looking for land, building, machinery or equipment to establish own enterprise, arranging for financial resources, applying for work permits and licenses, etc. However, in situations where the conventional means of seeking work are of limited relevance, where the labour market is largely unorganized or of limited scope, where labour absorption is, at the time inadequate or where the labour force is largely self-employed, the above standard definition of unemployment with its emphasis on seeking work criterion might be restrictive and might not fully capture the prevailing employment situations in many developing countries including Ethiopia. Hence, the International Standards introduced provisions, which allows for the relaxation of the seeking work criterion in certain situations.

The provisions are two types, namely; partial relaxation and complete relaxation. Following the recommendations of the International Standard and reviewing the prevailing national situation, the 2005 National Labour Force Survey introduced a provision to capture the different forms of unemployment using the above alternative measurements. The treatment of the two options in the survey is described as follows.

Under partial relaxation, the definition of unemployment includes discouraged job seekers in addition to persons satisfying the standard definition. Discouraged job seekers are those who want a job but did not take any active step to search for work because they believe that they cannot find one.

Under the completely relaxed definition, unemployment includes persons without work and those who are available for work, including those who were or were not seeking work. That is, the seeking work criterion is completely relaxed and unemployment is based on the "without work" and "availability" criterion only. The availability in this situation is tested by asking the willingness to take up work for wage or salary in locally prevailing terms, or readiness to undertake self-employment activity, given the necessary resources and facilities.

This survey collected unemployment data in the standard, partially relaxed and completely relaxed options of measurements. After thorough evaluation and assessment of the results obtained using the three alternative and complementary measures; the rates obtained using the completely relaxed definitions were found most plausible and hence selected for reporting.

6.3 Levels and Distribution of Unemployment

In this survey the information on current unemployment rate was collected by asking a series of filtering questions to all unemployed persons aged ten years and over. The result obtained from the current status approach refers to the level of unemployment during short time interval of the seven days prior to the date of interview. The unemployment rate, which is computed as the proportion of the unemployed persons in the economically active population, can be used to measure the level of unemployment population of an area. These rates can also be used to make differential studies between sub groups of the population. Summary Table 6.1 presents the size of the currently unemployed population by sex, place of residence, broad age group and educational level for the total country.

Summary Table 6.1 Current Unemployment Rate of population Aged Ten Years and Over by Sex, Activity Status and Some background Variables Country total:- 2005

Background Variables	Total Unemployed Population			Unemployment Rate		
	Total	Male	Female	Total	Male	Female
Country Total	1,653,685	427,915	1,225,770	5.0	2.5	7.8
Place of Residence

All Literate	897,445	335,667	561,778	7.8	4.2	15.7
Non-Formal	31,316	13,168	18,148	2.9	1.4	11.0
Grade 1-8	505,169	179,628	325,541	5.9	3.1	11.9
General Education Not Completed	292,990	111,656	181,334	23.2	14.2	37.9
General Education Completed**	2,620	1,409	1,211	28.8	24.8	35.3
Certificate	15,395	5,173	10,222	7.6	4.5	11.7
Diploma (10+3) Not Completed	8,142	4,700	3,442	18.8	15.6	26.2
Degree Not Completed	1,792	985	807	13.9	11.0	20.5
Diploma & Above	23,720	11,743	11,977	9.4	6.6	16.2

** *Include those who completed preparatory grade*

The survey result reveals that in March 2005 there were 1,653,685 unemployed persons, out of whom males were 427,915 and females were 1,225,770. This means that the rate of unemployment in the current status approach for urban areas of the country is 20.6 percent. Unemployment rate for rural areas is only 2.6 percent. Unemployment rate for the male and female are 13.7 and 27.2 percent, respectively. This indicates unemployment is more of a problem for females than males.

Unemployment rate by age group is relatively found to be higher for the age groups 15-49 years, ranging from 1.8 percent to 7.7 percent. The youth population aged 15-24

years recorded the highest unemployment rate (7.7 percent) during the reference period. The rates for females are higher than that of males at all age groups.

According to the data in the Summary Table 6.1, the overall unemployment rate for literate persons (7.8 percent) is higher than that of illiterate (3.5 percent). Among the literate group, the rate of unemployment was relatively higher among those who completed general education (28.8 percent) closely followed by those who do not completed general education (23.2 percent). The above phenomenon is more pronounced among the females than males. The incidence of unemployment was relatively lower for those with non-formal education (2.9 percent) and holders of Grade 1-8 (5.9 percent).

Summary Table 6.2 shows the size of economically active and unemployed population of regions in the 2005 NLFS. The result depicts that unemployment rate is highest in Addis Ababa City Administration (31.2 percent) followed by Gambella Region (25.6 percent) and Dire Dawa Administrative Council (23.9 percent)

Whereas the unemployment rate for SNNP, Amhara and Oromia regions are found to be lowest. The highest discrepancy between female unemployment rate (22.8 and 18.0 percentage point) are observed in Gambella and Dire Dawa Administrative Council.

In 1994 Population and Housing Census, the urban unemployment rate was 22 percent and then increased to 26.4 percent in 1999 (CSA, 1997, 2000). The unemployment rate as registered in the Urban Biannual Employment and Unemployment surveys of October 2003 and April 2004 were 26.2 percent and 22.9 percent, respectively. In the March 2005 NLFS survey, the rate has declined to 20.6 percent. Decline in unemployment could occur either due to creation of jobs or shift from unemployment to inactive status.

Summary Table 6.2 Current Unemployment rate of Population Aged Ten Years and Over by Sex and Region: 2005

Regions	Total Economically Active Population			Total Unemployed Population			Unemployment Rates		
	Total	Male	Female	Total	Male	Female	Total	Male	Female
Regions	33,088,792	17,288,178	15,800,614	1,653,686	427,915	1,225,771	5.0	2.5	7.8

Benishangul-Gumuz	360,947	186,040	174,907	15,734	4,135	11,599	4.4	2.2	6.6
S.N.N.P.	6,838,598	3,477,155	3,361,443	241,031	42,933	198,098	3.5	1.2	5.9
Gambella	9,676	4,835	4,841	2,480	688	1,792	25.6	14.2	37.0
Harari	76,744	39,382	37,362	12,899	4,021	8,878	16.8	10.2	23.8
Addis Ababa City Admin.	1,161,525	578,485	583,040	361,964	130,228	231,736	31.2	22.5	39.8
Dire Dawa Council	158,366	76,023	82,343	37,915	11,073	26,842	23.9	14.6	32.6

The unemployment rate for the 26 major urban centers is presented in Summary Table 6.3. As can be seen from this table, the overall unemployment rate for these major urban centers is 30.5 percent, - 20.4 percent for males and 41.1 percent female. Comparing the major urban center, the rate is higher for Jijiga town and Addis Ababa City Administration (38.6 percent and 33.6 percent), respectively.

Summary Table 6.3 Current Unemployment Rate for Selected Urban Centers Aged Ten Years and Over by Sex: 2005

6.4 Previous work experience and Duration of Unemployment

Summary Table 6.4 presents the distribution of the country unemployed population by sex, previous work experience and duration of unemployment. As it has been indicated in the table, out of 1,653,685 unemployed persons of the country about 47.5 percent never had work experience prior to the survey date. The data also revealed that 50.0 percent

unemployed females had no previous work experience, while about three-fifths of the unemployed male had previous work experience.

In the table, one can easily see that the majority i.e. three-fifths (38.1 percent) of the unemployed persons have been without work for 1-6 months. The table also shows 22.8 percent and 8.2 percent of unemployed urban population remained job less for 7-12 months and 13-24 months, respectively. The above pattern also holds true for both the males and the females. The proportion of unemployed person with previous work experience is higher in rural areas (52.6 percent) than that of urban areas (51.2 percent).

ETHIOPIA
CENTRAL STATISTICAL AGENCY
THE 2005 NATIONAL LABOUR FORCE SURVEY SUMMARY AT NATIONAL LEVEL

INTRODUCTION

The 2005 National Labour Force Survey (NLFS) is designed to provide labour market indicators at country, regional and major town levels. A total of 21,420 households in urban areas and 24,861 households in rural areas were selected from 1825 Enumeration Areas (EAs) (830 in rural areas and 720 in urban areas) The current Labour Force Survey covered all rural and urban parts of the country with some exceptions Non-sedentary population of three zones of Afar & six zones of Somali regions and all zones of Gambella region (with the exception of Gambella town) are not covered in the survey. The survey result showed that the total population of the country residing in conventional households in March 2005 to be 63,228,600 of which 31,281,391 (49.5 percent) are males and 31,947,209 (50. 5 percent) are females.

The core information that were collected includes engagement in productive activity, employment situations and level and characteristics of unemployment. The results of the survey have already been released in a report containing description of summary results and statistical tables (Statistical Bulletin 365) . This flyer presents key findings of the survey for the country as a whole. Here, the findings are comprised of main Key Labour Market Indicators (KILM).

THE MAJOR FINDINGS OF THE SURVEY

Economically active population/ the labour force /

The economically active population comprises the population aged ten years and above that furnishes labour to the economy , that is employed and unemployed population. It is measured using long reference period (i.e.; during the last 12 months prior to the date of interview) and short reference period (i.e.; during the last 7 days prior to the date of interview). Accordingly, the size of the economically active population of the country as measured in the 12 months prior to the survey was 32,158,392, while the economically active population in the last 7 days (also termed as the labour force) is 33,088,793.

Activity Rate of the Population

Economic activity rate (labour force participation rate) is calculated by dividing number of persons in the labour force as a percentage of the working-age population where the

Key Labour market Indicators from National Labour Force Survey of 2005

Indicators	Place of residence		
	Urban + Rural	Urban	Rural
Economically active population aged ten years and over in the last 12 months prior to the date of interview	32,158,392	3,964,380	28,194,012
Economically active population aged ten years and over in the last7 days prior to the date of interview	33,088,793	4,340, 269	28,748,524
