## **FOREWORD**

An agricultural census, which would serve as a source of a benchmark data for the sector has not been conducted in Ethiopia. However, in order to provide basic agricultural information to data users, annual agricultural sample surveys have been carried-out since 1980/81 by the Central Statistical Authority (CSA). Although, these annual sample surveys have some limitations in terms of scope, coverage and level of disaggregation, these surveys have served as a means of narrowing the data gap in the sector.

Considering the importance of the agricultural sector and the need for a comprehensive data, the CSA has requested the concerned government authority to initiate the undertaking of a National Agricultural Census several times. That is, it has submitted a project proposal immediately after the launching of the 1984 National Population and Housing Census. Moreover, it has also attempted to materialize this census in late 1980's and in early 1990's i.e. immediately after the undertaking of the 1994 National Population and Housing Census. The attempt continued till CSA got a positive response from the government in 1998. Hence, the CSA has been carrying out the Agricultural Census preparatory activities from September 1999, to August 2001.

Thus, in order to overcome the above-mentioned limitations on the data generated from the Annual Agricultural Sample Surveys and provide a benchmark data on the agriculture sector, the CSA launched the fieldwork of the first ever Ethiopian Agricultural Sample Enumeration in September 2001. Prior to launching the sample enumeration a number of preparatory activities such as the preparation of the census documents, undertaking the pretests and the pilot censuses, ...etc were also carried-out.

The 2001/02 Ethiopian Agricultural Sample Enumeration was launched under the auspices of the Ethiopian Agricultural Census Commission that was set up

under Proclamation No. 238/2001. The Commission is chaired by the Prime Minister and the members of the Commission are drawn from various relevant Federal Ministries and other government organizations. The Central Statistical Authority serves as the Secretariat Office of the Commission. Hence the collection, processing, evaluation and analysis of the census data as well as its dissemination are the responsibilities of this office.

The 2001/02 Ethiopian Agricultural Sample Enumeration is a huge nation wide operation, which could not be undertaken by a single organization. Hence, in order to enhance and facilitate the census enumeration activities Regional, Zonal, and Wereda Census Commissions have been established and Census Committees were set-up at Kebele levels. In the conduct of this census, full cooperation and assistance of governmental and non-governmental organizations, external donor agencies and the public in general have been obtained.

It is worth mentioning that the 2001/02 Crop Production Forecast Report, which is the first phase of the Agricultural Census was prepared, printed and disseminated to agricultural data users in December, 2001.

On the other hand, the census data on area under crop, production and yield of temporary crops consisted of cereals, pulses, oil seeds, vegetables and root crops for Meher Season was processed, compiled, evaluated and a report has been prepared and printed. This report entitled as a "Report on the Preliminary Results of Area, Production and Yield of Temporary Crops" (Meher Season, Private Peasant Holdings) is the Second Census Report so far published printed and disseminated to agricultural data users in October, 2002. It should be noted that during the census, huge sets of data on agriculture and related topics were collected. Given the limited resources (skilled manpower, computers...) available at the head quarters, data processing and summarization of results require quite longer period, than originally expected.

Since the release of the above mentioned Census Preliminary Report, the CSA, have put all the necessary efforts and made all the available resources, (skilled manpower computers,...) at the disposal of the census data processing activities. Consequently, the Authority has reached a stage where the agricultural census data processing activities have advanced to a stage where the data can be evaluated, reports can be prepared and released at regional levels and eventually at national level.

Thus, the Agricultural Census Report on Oromia Region is the eighth series of this census report. This regional report is a comprehensive one and it consists all the agricultural data collected during the 2001/02 Ethiopian Agricultural Sample Enumeration. These data include: the socio-economic characteristics of the population in agricultural households; land use; area, production and yield of temporary and permanent crops; farm management practices; livestock, poultry and beehives; and farm implements, draught animals and storage facilities. Similar comprehensive reports for the other regions will follow and would be released consecutively.

The Office of the Ethiopian Agricultural Census Commission would like to thank all government and non-government agencies who participated in the organization of the census, the supervision of the field work, the data collection, and the respondents who participated in providing the necessary census data. The Ethiopian government has given huge financial and unreserved administrative support in undertaking the 2001/02 Ethiopian Agricultural Sample Enumeration. This indicates the continuous commitment and high priority offered by the Ethiopian Government for the development of the agricultural sector statistics as well as the other socio-economic and demographic statistics.

Finally, the Office would also like to take this opportunity to express its many thanks to the United States Agency for International Development (USAID) for its generous financial and technical assistance for the census. Moreover, thanks are due to the European Union (EU) for its financial assistance and the British Department for International Development (DFID) for its material assistance for the census.

Abdulahi Hassen (Ph.D.)

Member and Secretary,

Central Agricultural Census Commission

## CHAPTER V

### AREA AND PRODUCTION OF CROPS AND CROP UTILIZATION

#### 1 INTRODUCTION

Ethiopian farming largely produces only enough food for the peasant holder and his family for consumption, leaving little to sell. This inadequate volume of production is ascribed to the tardy progress in the farming methods and scattered pieces of land holdings. Under this traditional sector, agriculture is practiced on public land and most of the produce is mainly for own consumption. The diverse climate of the country and the multiple utilizations of crops have prompted the vast majority of agricultural holders to grow various temporary and permanent crops. Despite the variation in the volume of production, the relative importance and pattern of growth of these crops are largely similar across many of the regions. This similarity is well observed and demonstrated in the statistical tables presented in this report. In some regions there seems to be a shift in choice of crops grown. Maize, wheat and Teff are the grain crops that figure prominently in volume of production in Oromia Region.

There is a general agreement that the performance of an agricultural system should achieve a steady supply of food to the people of a country. But, unless special attention is focused on agriculture its performance can be impeded by vagaries of nature, population growth and scarcity and fragmentation of land, thus, affecting food supply and posing a challenge to the federal and regional governments. This situation calls for an overhaul of the agricultural system in the country or the regions.

In order to have a flourishing agriculture, which sustains reliable food supply, the federal and regional governments have to formulate and implement farm programs that ensure food security. The preparation, execution, monitoring and assessment of these programs entail statistics on agriculture particularly

crop production since it is the prime target that national or regional agricultural policies aim at.

The collection of data on crop production should encompass all crop seasons in the agricultural calendar and farming activities in both rural and urban areas. It should also include the wide range of crops that are grown and embodied in the food security system, which are indispensable for a sustained provision of staple diet and other cash crops like coffee and Chat.

In view of this, crop production data for private peasant holdings for both Meher and Belg seasons in both rural and urban areas were collected in the census to provide the basis for decision making in the process of implementing timely food security measures and to make policy makers aware of the food situation in the country.

Thus, in this chapter the census data on production of temporary /annual crops such as cereals, pulses, oilseeds, vegetables and root crops are presented in Section 2. Production of permanent crops that included fruit crops, stimulant crops and other permanent crops are dealt with in Section 3. Moreover, the utilization of temporary crops as well as permanent crops for various purposes such as household consumption, seed, sale, paying wages in kind ...etc are indicated in Section 4.

Part III comprises of over a thousand pages. As a result, it is neither simple nor comfortable to the reader to present it as one document. Accordingly, the content of Part III is grouped to Part III.A, Part II.B and Part III.C. Thus, Part III.A constitutes the introductory section (i.e. Section 1) and Section 2 of the report. Part.B includes the introduction section and Section 3 of the report. On the other hand, Part III.C also consists the introductory section, and Section 4.

Furthermore, these census data are also presented for all the weredas in the region. Hence, tables providing these data at wereda level are also given at the end of the chapter. Standard errors and Coefficients of variation for selected variables are provided as an annex to this chapter.

### **3. PRODUCTION OF PERMANENT CROPS**

Permanent crops are long term crops that occupy the field planted for a long period of time and largely harvested every year and do not have to be replanted for several years after each harvest. These include tree crops such as coffee, Enset, Chat, oranges, mangoes, bananas, papayas, avocados... etc. The trees that yield fruits like oranges; mangoes, papayas, apples and others are also known as fruit trees.

Permanent crops are a good source of cash both for the holders and the country generating handsome income and foreign exchange at the best of times. For instance, between September 2001 and August 2002 Ethiopia exported 53,142 quintals of fruits and nuts and 91,705 quintals of Chat valued at 16.5 and 426.7 million Birr, respectively, (CSA, external trade statistics). With these bits of information and the dietary and economic importance of the crops in mind, it is not difficult to project the profits that can be reaped from the permanent crops if the farming in this regard is well developed and managed.

Fruits are not only a source of cash but are also a reliable source of nutrition that is essential for the health and growth of humans. There has even been an oft-repeated advice from health authorities that we should include fruits in our daily meals to make it nutritious. The two points made on the importance of permanent crops underscore the fact that fruit farming should be encouraged and expanded to have a steady supply of the desired products.

It is possible to conjecture that permanent crops in Ethiopia are not as well developed as they are in other countries. But the potential to develop them is great as Ethiopia is blessed with diverse climate conducive to the crops. In order to direct efforts towards the development of permanent crops, one requires statistical data regarding this sector of the agriculture. Adequate data on type and volume of production, area under permanent crops and their distribution have not been available. Hence, to bridge up

Moreover, Chapter VI treats Farm Management Practices. Further, in Chapter VII of this report, Size, Characteristics and Purpose of Livestock and Livestock Products are discussed. Finally, in Chapter VIII the census results are presented on Farm Implements, Draught Animals and Storage Facilities.

As given above, the Agricultural Census report for Oromia Regional State constitutes eight Chapters presented on over four thousand pages. Hence, it is neither possible nor comfortable to the reader to present it as a single report. Accordingly, the report is presented in “Six Parts” with the Introductory Chapter (i.e. Chapter I) and The Census Methodology and Operations (i.e. Chapter II) as common inputs to each Part. Thus,

- *Part I constitutes the first two common Chapters and Chapter III.*
- *Part II includes the first two common chapters and Chapter IV.*
- *Part III:*
  - *Part III.A consists of the first two common Chapters and Area and Production of Temporary Crops (i.e. Section 2) from Chapter V,*
  - *Part III.B comprises of the Introductory Section (i.e. Section 1) and Area and Production of Permanent Crops (i.e. Section 3) from Chapter V, and*
  - *Part III.C consists of the Introductory Section (i.e. Section 1) and Crop Utilization (i.e. Section 4 ) from Chapter V.*
- *Part IV:*
  - *Part IV.A includes the first two common Chapters and the Introductory Section (i.e. Section 1) and Cropland Area Under Agricultural Inputs and Farm Management (i.e. Section 2) from Chapter VI.*
  - *Part IV.B consists of the Introductory Section (i.e. Section 1) and Holders Applying Fertilizers and Quantity of Fertilizer Applied (i.e. Section 3) from Chapter VI, and*
  - *Part IV.C includes the Introductory Section (i.e. Section 1) and Sections 4 – 8 of Chapter VI.*
- *Part V constitutes the first two common Chapters and Chapter VII. Finally,*
- *Part VI comprises the first two common chapters and Chapter VIII.*

Also, each Part of the report encompasses Appendix I that shows the Estimation Procedures of Totals, Ratios and Sampling Errors; Appendix II gives the Number of EA's and Agricultural Households Sampled and Covered in the region by wereda; and Appendix III shows the Agricultural Sample Enumeration Questionnaires. Moreover, tables that show the Standard Errors (S.E.) and Coefficients of Variations (C.V.) are given as an annex at the end of the relevant chapters.

For simplicity of description of the statistical tables and comparison purposes permanent crops have been grouped into three categories. Each category has a semblance of similarity, which necessitated the categorization. The categories are fruit crops, stimulant crops and other permanent crops. These categories include only permanent crops on which yield data have been collected.

### **3.1. Fruit Crops**

Various kinds of fruit crops grow in different regions of the country yielding varying quantities of fruits within the private peasant holdings in the traditional way. There are also a few fruit farms that are run by enterprises in the modern way. The volume of fruit production obtained from the peasant farms is small signalling the absence of development in fruit farming. A look at the tables helps to crystallize this point.

As Summary Table V-27 shows more than a quarter of a million hectares of land is under permanent crops in Oromia Region. Fruit crops constituted a little more than a twentieth of the permanent crop area yielding more than 826 thousand quintals of fruits. Bananas, mangoes and papayas shared 61.11%, 15.26% and 7.71% of the fruit crop area and 57.32%, 13.65% and 15.36% of the fruit production, in that order. Summary Tables V-27 – V-39 present the census result on area and production of permanent crops at zonal level for Oromia Region.

In West Welega Zone, as Summary Table V-28 shows, more than half of the fruit crop area is under bananas and 22.87% was under mangoes. Out of the fruit production in the zone, 63.42%, and 23.25% were that of bananas and mangoes respectively.

In East Welega Zone, 56.02% and 37.31% of the fruit crop area were under bananas and mangoes, respectively. The bananas and mangoes yielded 37.60% and 48.46% of the fruit production as indicated in Summary Table V-29.

In Illubabor Zone, bananas and mangoes covered 73.19% and 9.10% of the area under fruit crops, respectively. The same crops yielded 69.17% and 8.24% of the fruit production, in the same order, as indicated in Summary Table V-30.

In Jimma Zone, as Summary Table V-31 shows, 54.26%, and 14.68% of the fruit crop area were under bananas and oranges respectively. The production obtained from these crops was 51.36% and 21.66% of the zonal fruit total, in the same order.

In West Shewa Zone, bananas and mangoes took up 59.56% and 21.10% of the fruit crop area and 47.71% and 21.02% of the fruit production, in that order, as indicated in Summary Table V-32.

Summary Table V-33 shows that 66.13% and 20.31% of the fruit crop area, in North Shewa Zone, were under bananas and oranges, respectively, and 48.56% and 39.59% of the fruit production were that of bananas and oranges in that order.

In East Shewa Zone, as Summary Table V-34 indicates, papayas and bananas shared 63.96% and 13.46% of the fruit crop area and 96.57% and 2.60% of the production, respectively.

In Arsi Zone, more than half of the fruit crop area was under bananas and 17.94% under oranges as indicated in Summary Table V-35. The same crops yielded 50.08% and 22.44% of the fruit production in the zone, in the same order.

In West Harerge Zone, as shown in Summary Table V-36, bananas and papayas covered 56.31% and 19.39% of the fruit crop area, respectively. The production obtained from the same crops was 85.86% and 7.51% of the zonal fruit total.

In East Harerge Zone, mangoes and bananas added 38.90% and 30.03% of the fruit crop area and 12.43% and 56.17% of the production to the zonal fruit crop area and production, respectively, as shown in Summary Table V-37.

In Bale Zone, as Summary Table V-38 shows, bananas and papayas contributed 68.06% and 10.94% of the area and 69.54% and 21.23% of the production to the zonal fruit total.

As shown in Summary Table V-39, bananas took up 78.26% of the fruit crop area and 75.32% of the production, respectively, in Borena Zone.

### **3.2. Stimulant Crops**

This category embraces cash crops like coffee and Chat, which are extensively grown in many parts of the country. It is needless work to verify by quoting statistical evidences that coffee is a major foreign exchange earner. It may not be even surprising to hear that Chat farming is becoming a rapidly expanding phenomenon in Ethiopia because of its economic importance. As the census covered a wide range of crops, the statistics on Chat would perhaps be more tantalizing than the others. Summary Table V-23 shows the situation in which Chat, coffee, and hops (Geshe) are found in Oromia Region.

The data in Summary Table V-27 demonstrates that most of the regional permanent crop area (nearly a quarter of a million hectares of land) is under stimulant crops. Of the total area under stimulant crops in the region, 70.79% is that of coffee resulting in 66.93% of the volume of stimulant crop production. About 27.15% of the regional stimulant crop area was that of Chat resulting in 26.12% of the volume of production, respectively.

In West Welega Zone, more than 52 thousand hectares of land was under stimulant crops and 96.70% of it was under coffee as shown in Summary Table V-28. The volume of coffee production was 94.37% of the stimulant crop production.

In East Welega Zone, as Summary Table V-29 shows, coffee and hops covered 73.97% and 20.93% of the stimulant crop area and 53.49% and 41.79% of the production, respectively.

In Illubabor Zone, as indicated in Summary Table V-30, more than 35 thousand hectares of land was under stimulant crops 95.50% of which went for coffee. The production of this crop was 92.47% of the stimulant total in the zone.

In Jimma Zone, coffee and Chat shared 85.68% and 14.19% of the stimulant crop area and 85.16% and 14.48% of the production, respectively as shown in Summary Table V-31.

In West Shewa Zone, as Summary Table V-32 shows, Chat and hops contributed 44.68% and 44.40% of the stimulant crop area and 19.43% and 77.06% of the production to the zonal total of stimulant crops, respectively.

In North Shewa Zone, as shown in Summary Table V-33, hops and coffee added 80.52% and 16.79% of the area under stimulant crops and 95.07% and 3.91% of the production to the zonal total, respectively.

In East Shewa Zone, as shown in Summary Table V-34, hops took up 65.85% of the stimulant crop area and 97.12% of the production.

In Arsi Zone, as Summary Table V-35 indicates, coffee and Chat covered 61.85% and 29.25% of the area under stimulant crops and 62.28% and 9.01% of the production, respectively.

In West Harerge Zone, as Summary Table V-36 shows, Chat and coffee contributed 59.45% and 40.19% of the stimulant crop area and 69.78% and 29.30% of the production to the zonal total.

In East Harerge Zone, as shown in Summary Table V-37, Chat and coffee shared 88.40% and 11.53% of the stimulant crop area and 90.32% and 9.65% of the production, respectively.

In Bale Zone as Summary Table V-38 indicates, coffee and Chat added 74.79% and 21.65% of the stimulant crop area and 76.17% and 13.08% of the production to the zonal total, respectively.

In Borena Zone, as shown in Summary Table V-39 coffee and Chat contributed 88.24% and 10.49% of the stimulant crop area and 96.02% and 2.91% of the production to the zonal stimulant total.

### **3.3. Other Permanent Crops**

This group includes sugar cane on which yield data have been collected. Though, sugar cane is an industrial crop it looks that it is not widely grown by the private peasant holders, as the statistics seem to indicate. It is produced on a small scale by private peasant holders in some pockets of the country and usually does not end up in sugar cane processing plants. The sugar factories in Ethiopia run extensive sugar cane plantations. As the statistics indicate 810,194 quintals of sugar worth 116,268,174 Birr was exported between September 2001 and August 2002 (CSA, external trade statistics).

The data in Summary Table V-27 seem to indicate that peasant farmers grow some sugar cane in Oromia Region. More than five thousand hectares of land was under sugar cane yielding more than half a million quintals of the same crop. The area under sugar cane in the zones of Oromia region ranges between 23 and 1,058 hectares of

land and the production falls in between 855 and about 126 thousand quintals as shown in Summary Tables V-28 – V-39.

SUMMARY TABLE V- 27 AREA AND PRODUCTION OF PERMANENT CROPS BY CROP TYPE FOR PRIVATE PEASANT HOLDINGS

Oromia Region		All				Rural		Urban	
Crop type	Area in Crop (HA)	%	Production (QT)	%	Area in Crop (HA)	Production (QT)	Area in Crop (HA)	Production (QT)
