I. INTRODUCTION

Ethiopia's economy is mainly based on agriculture. The majority of the population is predominantly engaged in agriculture and its contribution to Gross Domestic Product is substantially high. It is therefore, essential to have reliable and basic quantitative information on the current state of agriculture for use in the establishment of national priorities, in development planning and socio-economic policy formulation.

The Integrated System of Food and Agricultural Statistics Programme was initiated in 1980 as a major part of the Rural Integrated Household Survey Programme which in turn is part of the National Integrated Household Survey Programme. Since the implementation of the first round of the programme in 1980/81 (1973 E.C.), an Agricultural Sample Survey has been carried out every year.

In this report the 1991/92 (1984 E.C.) Agricultural Sample Survey results of all land uses, number of agricultural households, household members, average household size by holding, number of agricultural households by size of holding and number of holders by age and type of holding are presented.

II. OBJECTIVE

The objective of the Agricultural Sample Survey which has been conducted annually since 1980/81 (1973 E.C.) is to collect basic quantitative information about the nation's agriculture needed in the establishment of national priorities, in development planning and socio-economic policy formulation. It aimed at obtaining reliable estimates on Area, Production, Crop Land Utilisation, Agricultural Practices, Livestock and Poultry and other agricultural variables for the regions and the country as a whole.

As mentioned in the introduction, this report deals with the results of 1991/92 (1984 E.C.) survey and covers all land uses, number of agricultural households, members, average household size and area by size of holding, number of agricultural households by size of holding and size of agricultural households and number of holders by age and type of holding for private peasant holdings for the main season at national as well as regional levels. In this publication, as mentioned above, it is attempted to report on all land uses.

III. SCOPE OF THE SURVEY

The 1991/92 (1984 E.C.) Agricultural Sample Survey was launched in 25 of the Administrative Regions and one Autonomous region excluding Eritrea, Tigray, Asab and Ogaden Autonomous Regions. Information was collected on area under major crops, production of major crops, general agricultural practices, number of livestock and poultry and other related agricultural variables, from selected private holders in the 652 Farmers' Association .

But, during the survey year no data were collected from cooperatives and state farms.

IV. BASIC CONCEPTS AND DEFINITIONS

HOLDER: A holder is a person who exercises management control over the operations of the agricultural holding and takes the major decision regarding the utilisation of the available resources. He has technical and economic responsibility for the holding. He may operate the holding directly as an owner or as a manager.

Under conditions of traditional agricultural holding the holder may be regarded as the person, who with or without the help of others, operates land or raises livestock in his own right, i.e. the person who decides on what, when, where and how to grow crops or raise livestock and has the right to determine the utilisation of the products.

HOLDING: a holding is all the land and livestock kept which is used wholly or partly for agricultural production and is operated as one technical unit by one person alone, or with others, without regard to title, legal form, size or location.

SIZE OF HOLDING: In this report size of holding is determined by total area under different land uses, such as area under temporary crops, permanent crops and other land which includes fallow land, grazing land, wood land, etc...

HOUSEHOLD: A household may be either;

- a) a one person household, that is a person who makes provision for his own food or other essentials for living without combining with any other person to form part of a multi person household or
- b) a multi person household, that is, a group of two or more persons who live together and make common provision for food or other essentials for living. The persons in the group may pool their incomes and have a common budget to greater or lesser extent. They may be related or unrelated persons, or a combination of both.

AGRICULTURAL HOUSEHOLD: A household is considered an agricultural household when at least one member of the household is engaged in growing crops and/or breeding and raising livestock in private or in partnership with others.

TEMPORARY CROPS: Temporary crops are those crops which are grown with a cycle of under one year, sometimes only a few months with a view to be sown anew or planted for further production after the harvest. Similarly, crops grown in rotation are also considered temporary crops as these are destroyed when land is ploughed.

PERMANENT CROPS: Crops which occupy land for a long period of time and are not planted for several years after each harvest are considered as permanent crops. All fruit trees (e.g. oranges, mandarins, apples etc.) and trees used for beverages (like coffee, tea etc.) are considered as permanent crops. Permanent meadows and pastures, however, are excluded.

GRAZING LAND : Land used for growing herbaceous forage crops, either through cultivation or naturally is considered to be grazing land.

FALLOW LAND : Land which has been or intended to be, kept at rest for at least one agricultural year and a maximum idleness of less than five years should be considered temporarily fallow.

WOODLAND : It is defined as all tracts of timber natural or planted, consisting part of the holding which have values as wood, timber or other forest products or for protection. However, Forests used for recreational purposes are not included here.

OTHER LAND USES: Land occupied by the holders houses or buildings, parks, gardens, barn, land under water and ponds which are part of the holding are included here.

V. SAMPLE DESIGN

For the year 1991/92 (1984 E.C.) Agricultural Sample Survey, 867 Farmers' Associations were selected without replacement from the 25 Administrative Regions and one Autonomous Region in the country with probability proportional to size. From each selected farmers' associations, a systematic sample of 25 agricultural households from a fresh list of agricultural households were selected. But the coverage was only 652 Farmers Associations due to various problems.

All agricultural holders belonging to the selected agricultural households of the 652 FAs were enumerated and the required data were collected from these holders.

In the survey design more emphasis was given to temporary crops, therefore, care should be taken while using the estimates of permanent crops.

VI. METHOD OF DATA COLLECTION

For the 1991/92 (1984 E.C.) Agricultural Sample Survey, both interview and objective method of data collection were adopted. With respect to the information on area, all cropped fields under temporary and permanent crops belonging to the sampled holders were physically measured and for production, all fields under temporary crops of each selected holder were classified by type of crop and from each class a field under crop was randomly selected for crop cutting.

Physical area measurement was done with the help of compass, measuring tape and ranging poles. First of all, the north-western corner of the field was located. Starting from this corner point, the distance between the point and the next corner point was

measured and the bearing of the second from the first was read on the compass. The process will continue in a clockwise direction until it reaches the starting corner point .

The enumerators drew sketch maps of the measured fields on graph papers indicating the measurements in chosen scales. Calculation of area of the fields was done by the enumerators using the following formula.

$$\text{AREA OF MEASURED FIELD} = \frac{SC^2}{4}$$

Where S stands for the total number of full and half or larger than half squares inside the sketch and C, for the chosen scale.

Moreover area calculation was also done by HP 3000 computer. In this report the area measurement results were taken from the computer output.

VII. FIELD OPERATION AND REFERENCE PERIOD

The field work of the survey was carried out from September 1991 to February 1992. Field supervisors and enumerators were engaged in the operation.

The reference period of area under crop is related to the agricultural year.

VIII. ESTIMATION PROCEDURES

Estimation procedure is guided by the method with which the sample has been selected. Having followed certain set of rules for sample selection, the following formulas were applied for estimating a particular characteristic of the agricultural sample survey data collected during 1991/92 (1984 E.C.).

(i) Estimation of a reported characteristic of private households.

Let X_{hij} be a total of a characteristic reported by the j^{th} selected household in the i^{th} selected Farmers' Association (FA) in the h^{th} awraja.

A_{hijk} be area for a specific crop under the k^{th} feild for the j^{th} household in i^{th} FA in the h^{th} awraja.

l_{hij} number of fields under a specific crop for j^{th} household in the i^{th} selected FA in the h^{th} awraja .

m_{hi} be number of households sampled in the i^{th} selected FA in the h^{th} awraja .

M_{hi} be total number of households in the i^{th} selected FA in the h^{th} awraja

P_{hi} be probability of selection of the i^{th} selected FA in the h^{th} awraja

n_h be number of FAs selected in the h^{th} awraja.

The estimate of a characteristic per household in the i^{th} selected FA in the h^{th} awraja will be obtained by the following formula:-

$$\bar{X}_{hi} = \sum_{j=1}^{m_{hi}} \frac{X_{hij}}{m_{hi}}$$

and the estimate of total for a reported characteristic for the h^{th} awraja in the region will be:-

$$\hat{X}_h = \frac{1}{n_h} \sum_{i1}^{n_h} \frac{M_{hi} \bar{X}_{hi}}{P_{hi}}$$

The regional estimate is obtained by summing up all awraja estimates of that particular region. Moreover, national estimates are obtained by aggregating regional estimates.

(ii) Area estimated on the bases of objective measurement under a specific crop or land use for private households.

The average area per household for a specific crop or land use in the i^{th} selected FA in the h^{th} awraja is given by :-

$$\bar{A}_{hi} = \frac{\sum_{j1}^{m_{hi}} \sum_{k1}^{l_{hi}} A_{hijk}}{m_{hi}}$$

and the estimate of total area under a specific crop or land use in the h^{th} awraja is given by :-

$$\hat{A}_h = \frac{1}{n_h} \sum_{i1}^{n_h} \frac{M_{hi} \bar{A}_{hi}}{P_{hi}}$$

The regional and national estimates can be obtained in the same manner as mentioned in VIII (i).

(iii) Estimation of sampling error.

Sampling variance of total estimate for h^{th} awraja is estimated by assuming the FAs within each awraja were selected with

replacement. Although the variance is slightly over estimated, this assumption greatly simplifies the estimation procedure. Estimated variance for a total of a characteristic x is obtained by the following formula:-

$$\text{Var}(\hat{X}_h) = \frac{n_h}{n_h - 1} \left(\sum \hat{X}_{hi}^2 - \frac{\hat{X}_h^2}{n_h} \right)$$

where
$$\hat{X}_{hi} = \frac{M_{hi} \bar{X}_{hi}}{n_h P_{hi}}$$

Estimation of sampling variance for regional total estimate is obtained by aggregating variance estimates of the respective awraja totals. Furthermore, variance for the national total estimate is obtained by summing up variance estimates of all regions.

Some of the survey estimates take the form of a ratio of two estimates (For example, regional yield of a particular crop). This ratio estimate is given by :-

$$\hat{R} = \frac{\sum \hat{X}_h}{\sum \hat{A}_h} = \frac{\hat{X}}{\hat{A}}$$

The sampling variance of the ratio estimate is approximated by:-

$$\text{Var}(\hat{R}) = \frac{1}{\hat{A}^2} [\text{Var}(\hat{X}) + \hat{R}^2 \text{Var}(\hat{A}) - 2\hat{R} \text{Cov}(\hat{X}, \hat{A})]$$

Coefficient of Variation for a total of characteristic x in percent is estimated by :

$$\text{CV}(\hat{X}) = \frac{\sqrt{\text{VAR}(\hat{X})}}{\hat{X}} \times 100$$

IX SUMMARY OF RESULTS

PART I

Area under different land uses

During the 1991/92 (1984 E.C.) Agricultural Sample Survey data were collected on different land uses. These land uses in the private peasant holdings were land under temporary crops, land under permanent crops, grazing land, fallow land, wood land and other land not specified elsewhere.

Thus, according to the survey result (Table 1A), at national level the total area under total land use was estimated to be about 7113 thousand hectares. Out of this, 4967 hectares was under temporary crops, 387 thousand under permanent crops, 796 thousand hectares was under grazing land, 952 thousand hectares was under fallow land, 0.49 thousand hectares was under wood land and the rest 10.56 thousand hectares was under other land uses.

In this regard, the largest proportion of the total holdings (69.83%) was used for cultivation of temporary crops and the smallest proportion(0.01%) was used for wood land by the private peasant holders.

Furthermore, holdings under different land uses were classified in to seven groups. These groupings are

- Group I - under 0.10 hectare
- Group II - 0.10 - 0.50 hectare
- Group III - 0.51 - 1.00 hectare
- Group IV - 1.01 - 2.00 hectare
- Group V - 2.01 - 5.00 hectare
- Group VI - 5.01 - 10.00 hectare and
- Group VII - 10.01 and above hectare

From these groupings, as presented in Table 1B, we can see that most of the holdings under any temporary crops (38.49%) fall in group V, under permanent crop 33.64% fall in group III, under grazing land 32.63% fall in group II, under fallow land 39.07% fall in group II, under wood land 69.39% fall in group II and under other land uses 31.53% of it fall in group II. The details are shown in the indicated table.

In the same table, the total holding area and percentages of each group are indicated. It is estimated that the largest proportion, which is 31.19% of the total holdings was contained in group V. On the other hand, group VII the largest holding group accounts only for 0.54% of the total holdings.

As also shown in Table 1C, the average holding size per agricultural household is 1.23 hectares at national level. Moreover, the largest holding size was reported in Arsi Administrative Region which is 2.55 hectare and the least is in Dire Dawa Autonomous Region that is 0.47 hectares per household.

In addition the regional survey results on land uses are presented in Table 2 through Table 27. Accordingly, West Shewa administrative region reported the largest area land uses about 705 thousand hectares. The second one is Arsi administrative region with 673 thousand hectares. For further comparison purposes refer to the tables.

PART II

This part deals with number of agricultural households, number of members, average household size and average crop area by size of holding; and number of holders by age and type of holding; size of holding by size of agricultural household and type of crop area by size of holding in 1991/92 (1984 E.C.).

A. AGRICULTURAL HOUSEHOLDS, CROP AREA AND AVERAGE CROP AREA

The results of the 1991/92 (1984 E.C.) Agricultural Sample Survey indicates that the total number of private peasant households excluding Eritrea, Tigray, Asab, Ogaden Autonomous Regions and nomadic areas is 5.78 million and the area under crop is about 5.35 million hectares. Thus, the average area under crop per household is estimated to be 0.93 hectare.

As mentioned earlier, size of holdings have been classified into seven groups.

According to the classifications, it is estimated that 381.85 thousand agricultural households or 6.61 percent fall in Group I; 1619.22 thousand agricultural households or 28.02 percent fall in Group II; 1509.97 thousand agricultural households or 26.13 percent fall in Group III; 1388.04 thousand agricultural households or 24.02 percent fall in Group IV, 821.23 thousand agricultural households or 14.21 percent fall in Group V; 55.99 thousand agricultural households or 0.97 percent fall in Group VI; and 2.36 thousand agricultural households or 0.04 percent fall in Group VII. Thus, from this one can see that most of the agricultural households own cropland of size 0.10 - 0.50 hectare each (Group II) and the next is Group III or agricultural households with cropland of size 0.51 - 1.00 hectare each.

However, unlike the number of agricultural households, most of the cropland fall in Group V which consists 37.59 percent and in Group IV, which is 31.02 percent of the total cropland.

It should be noted that only 0.04 percent of the total agricultural households own more than 10 hectares of cropland each and only 0.50 percent of the total crop area falls in holding size of more than 10 hectares. Details are given in Table 28A.

Estimates of regional distribution of agricultural households, area of crop land and average area per household are presented in Table 28B (summary) and details, in Tables 29 to 54. As indicated in these tables among the administrative regions, the highest number of agricultural households is estimated for Sidamo, 510.24 thousands or 8.83 percent. The second and the third highest number of agricultural households are estimated for South Shewa, 8.58 percent and West Shewa, 7.94 percent, respectively.

It is also indicated in these tables that it is only in Arsi, Metekel, North Shewa, Addis Ababa, West Shewa and East Shewa Administrative Regions, though few in number, that there exists agricultural households who own above 10 hectares of cropland.

Furthermore, regional contribution to the total cropland is the highest in West Gojam among the regions, which is 514.78 thousand hectares or 9.62 percent, followed by West Shewa and East Gojam which contribute 470.62 thousand hectares or 8.79 percent and 430 thousand hectares or 8.03 percent, respectively.

On the other hand, the highest average crop area per household is estimated for East Shewa Administrative Region which is about 1.82 hectares followed by North Gonder and Addis Ababa administrative regions with 1.64 hectares and 1.52 hectares, respectively; while Dire Dawa Autonomous Region, Sidamo and North Omo administrative regions have the lowest average crop area per household when compared to the other regions. See also Table 28B.

B. AGRICULTURAL HOUSEHOLDS, MEMBERS AND AVERAGE HOUSEHOLD SIZE

The total number of members of the agricultural households in the rural area, which is of course, excluding Eritrea, Tigray, Asab and Ogaden Autonomous Regions, is estimated to be about 30.53 million. On the other hand, the projected 1984 population census figures excluding the above regions for the year 1984 E.C. is around 40.5 million. The expected difference is mainly attributed to

1. The sample consists of only rural agricultural households
2. There were some Awrajas in some regions that were not covered by the survey.

Furthermore, as indicated in Table 55A, the average household size ranges from 4.15 members per household in Group I to 9.37 members in Group VII. This distribution of the average number of members per household indicates that there are more persons per household in agricultural households with holdings of larger size. Thus, there seems to be direct relation between average household size and size of holding. From this we can observe that agricultural households with large holdings have the opportunity to use more people on the farm since they require more manpower.

Regional comparison of the survey result shows that Dire Dawa Autonomous Region has the highest average household size, i.e., 6.75 members per household. Bale, East Shewa and Asosa stand second, third and fourth with average household size of 6.28, 6.16 and 6.13 members, respectively. Details are given in Tables 56 to 81.

C. AGRICULTURAL HOUSEHOLDS, SIZE OF HOLDING AND SIZE OF HOUSEHOLD

The estimates of agricultural households by size of holding and size of agricultural households are presented in Table 82 for the country and in Tables 83 to 108 for the regions. The percentage distributions of agricultural households by number of persons in the agricultural households are as follows:-

Of the total, 2.79 percent of the agricultural households are composed of one member; 22.66 percent of the agricultural households are composed of 2-3 members; 33.16 percent are composed of 4-5 members; 36.48 percent are composed of 6-9 members and 4.91 percent of the agricultural households are composed of 10 and above members.

This indicates that most of the agricultural households have 6 - 9 members and a one member agricultural households are few in number. For details see the tables presented.

D. HOLDERS AND TYPE OF HOLDING

An attempt has been made to classify the number of agricultural households by age of holder and type of holding. The type of holdings were classified into three categories as follows:-

CATEGORY I	-	CROP HOLDING ONLY
CATEGORY II	-	LIVESTOCK HOLDING ONLY
CATEGORY III	-	CROP AND LIVESTOCK HOLDING

According to this classification at national level, it is estimated that about 1,082.94 thousand holders or 18.20 percent fall in category I; 122.04 thousand holders or 2.05 percent fall in category II and 4,745.29 thousand holders or 79.75 percent fall in category III. From this, we can see that most of the peasant holders exercise mixed farming. This statement holds true for all Autonomous and Administrative Regions.

Furthermore, one can see that the highest number of holders fall in the age group of 30-39 years which is about 24.79 percent and the next highest is in the age group of 40-49 which accounts for about 21.55 percent of the total number of holders. Details are given in Tables 109-135.

N.B.: In the tables, the breakdowns may not add up to total due to rounding.

PART III

In this part, estimates of area under temporary and permanent crops by size of holding in relation to total crop area and agricultural households is presented.

A. CROP LAND UTILIZATION AND SIZE OF HOLDING

For the purpose of this survey the area under crop land has been classified into two categories, namely temporary cropland and permanent cropland.

According to the above classification, it is estimated that the total area under temporary crop, is about 4,967 thousand hectares or 92.78 percent, while the area under permanent crop is about 387 thousand hectares or 7.22 percent. Details of area by type of cropland on size of holding are given in Table 136.

Regional estimates of area by type of cropland and size of holding are also given in Tables 137-162. As indicated in these tables, West Gojam, East Gojam and West Shewa Administrative Regions with 10.15 percent, 8.64 percent and 8.61 percent, respectively, have the highest percentage share of area under temporary crops among the administrative and autonomous regions. On the other hand, Sidamo with 32.12 percent, North Omo with 11.30 percent and West Shewa with 11.14 percent have accordingly the highest percentage share of area under permanent crops.

B. AGRICULTURAL HOUSEHOLDS, TYPE OF CROPLAND AND SIZE OF HOLDING

As mentioned earlier, the total number of agricultural households is estimated to be about 5,778 thousand. Of this total, 5,373 thousand agricultural households or about 92.99 percent are engaged in the cultivation of temporary crops while about 2,592 thousand agricultural households or about 44.86 percent are engaged in growing permanent crops. It should be noted that agricultural households which are engaged in cultivation of temporary and permanent crops are not exclusive. It is also indicated earlier that the average area under total cropland per household was estimated to be 0.93 hectare. When this is examined by type of cropland, the average area under temporary and permanent crops per household was 0.92 and 0.15 hectare, respectively.

According to the classification of size of holdings established earlier, the estimates and percentage distribution of agricultural households that grow temporary crops are as follows:-

About 237 thousand agricultural households or 4.40 percent of the total agricultural households which grow temporary crops fall in Group I; 1438 thousand agricultural households or 26.77 percent fall in Group II; 1453 thousand agricultural households or 27.04 percent fall in Group III; 1368 thousand agricultural households or 25.47 percent fall in Group IV; 819 thousand agricultural households or 15.24 percent fall in Group V, 55 thousand agricultural households or 1.03 percent fall in Group VI and about 2.4 thousand agricultural households or 0.04 percent fall in Group VII. Similarly, estimates and percentage distribution of agricultural households that grow temporary crops by holding size are given in Table 163 for the country, and in Tables 164 to 189 for the regions.

C. AREA UNDER TEMPORARY CROPS

As indicated in Table 190, the total area under temporary crops was estimated to be about 4,966 thousand hectares, out of which 3,878 thousand hectares or 78.08 percent accounts for area under cereal crops; 701 thousand hectares or 14.11, percent for area under pulses; 230 thousand hectares or 4.63 percent, for area under oilseeds and 158 thousand hectares or 3.18 percent, for area under other crops.

Furthermore, the percentage distribution of area under cereal crops shows that teff crop occupies the highest percentage which is about 35.02 percent and the next highest is maize which accounts for about 19.47 percent.

The percentage distribution of area under pulses indicates that horse beans covers the highest which is about 41.51 percent and field peas stands second with 20.55 percent of the total area under pulses.

In the case of oilseeds, area under neug is the highest with 64.02 percent and linseed stands second with about 27.49 percent of the total area under oilseeds.

Details are given in Table 190 for the country and in Tables 191 to 216 for the regions.

But it should be noted here that there may not be exact consistency between the crop area figures published in the 1991/92 Area and Production Report of August 1993 and these results. These inconsistencies arisen because, in the previous report the crop area results were estimated using fifteen out of the twenty five sampled agricultural households while the area results of all land uses in this report were estimated using the twenty five sampled agricultural households.

N.B.: In the tables, the breakdowns may not add up to total due to rounding.
