I. INTRODUCTION

Ethiopia's economy is mainly based on agriculture. The majority of the population is predominantly engaged in agriculture and its contribution to Gross Domestic Product is substantially high. It is therefore, essential to have reliable and basic quantitative information on the current state of agriculture for use in the establishment of national priorities, in development planning and socio-economic policy formulation.

The Integrated System of Food and Agricultural Statistics Programme was initiated in 1980 as a major part of the Rural Integrated Household Survey Programme which in turn is part of the National Integrated Household Survey Programme. Since the implementation of the first round of the programme in 1980/81 (1973 E.C.), an agricultural sample survey has been carried out every year.

This report deals with the results of 1988/89 (1981 E.C.) survey and covers land utilisation, number of households, members, average household size and area by size of holding, number of households by size of holding and size of households and number of holders by age and type of holding for private peasant holdings for the main season at national as well as regional levels.

II. OBJECTIVE

The objective of the Agricultural Sample Survey which has been conducted annually since 1980/81 (1973 E.C.) is to collect basic quantitative information about the nation's agriculture needed in the establishment of national priorities, in development planning and socio-economic policy formulation. It aimed at obtaining reliable estimates for the regions and the country as a whole.

III. SCOPE OF THE SURVEY

The 1988/89 (1981 E.C.) Agricultural Sample Survey was launched in 25 of the newly formed administrative regions and one autonomous region excluding Eritrea, Tigray, Asab and Ogaden Autonomous Regions. Information was collected on area under major crops, production of major crops, general agricultural practices, number of livestock and poultry and other related agricultural variables, from selected holders in the 867 sampled Farmers' Associations.

The units of enumeration were private peasant holdings, cooperatives and state farms. The cooperative farms include producers' cooperatives and other cooperatives such as women's cooperatives, youth cooperatives etc. It should be noted that all types of cooperatives existing in the selected 867 Farmers' Associations were enumerated. Moreover, regarding producers' cooperatives, information was collected from all producers' cooperatives in the regions covered by the survey.

IV. BASIC CONCEPTS AND DEFINITIONS

HOLDER: A holder is a person who exercises management control over the operations of the agricultural holding and takes the major decision regarding the utilisation of the available resources. He has technical and economic responsibility for the holding. He may operate the holding directly as an owner or as a manager.

Under conditions of traditional agricultural holding the holder may be regarded as the person, who with or without the help of other, operates land or raises livestock in his own right, i.e. the person who decides on what, when where and how to grow crops or raise livestock and has the right to determine the utilisation of the products.

HOLDING: a holding is all the land and livestock kept which is used wholly or partly for agricultural production and is operated as one technical unit by one person alone, or with others, without regard to title, legal form, size or location.

SIZE OF HOLDING: In this report size of holding is determined by total area under cropland which includes area under temporary crops, permanent crops and other land which includes vegetables, spices, etc...

HOUSEHOLD: A household may be either;

- a) a one person household, that is a person who makes provision for his own food or other essentials for living without combining with any other person to form part of a multi person household or
- b) a multi person household, that is, a group of two or more persons who live together and make common provision for food or other essentials for living. The persons in the group may pool their incomes and have a common budget to greater or lesser extent. They may be related or unrelated persons, or a combination of both.

TEMPORARY CROPS: Temporary crops are those crops which are grown with a cycle of under one year, sometimes only a few months with a view to be sown anew or planted for further production after the harvest. Similarly, crops grown in rotation are also considered temporary crops as these are destroyed when land is ploughed.

PERMANENT CROPS: Crops which occupy land for a long period of time and are not planted for several years after each harvest are considered as permanent crops. All fruit trees (e.g. oranges, mandarins, apples etc.) and trees used for beverages (like coffee, tea etc.) are considered as permanent crops. Permanent meadows and pastures, however, are excluded.

V. SAMPLE DESIGN

For the year 1988/89 (1981 E.C.) Agricultural Sample Survey, 867 Farmers' Associations were selected without replacement from the 25 Administrative Regions and one Autonomous Region in the country with probability proportional to size. From each selected farmers' associations, a systematic sample of 25 agricultural households from a fresh list of agricultural households were selected.

All agricultural holders belonging to the selected agricultural households were enumerated and the required data were collected from these holders.

In the survey design more emphasis was given to temporary crops therefore, care should be taken while using the estimates of permanent crops.

VI. METHOD OF DATA COLLECTION

For the 1988/89 (1981 E.C.) Agricultural Sample Survey, both interview and objective method of data collection were adopted. With respect to the information on area, all cropped fields under temporary and permanent crops belonging to the sampled holders were physically measured and for production, all fields under temporary crops of each selected holder were classified by type of crop and from each class a field under crop was randomly selected for crop cutting.

Physical area measurement was done with the help of compass, measuring tape and ranging poles. First of all, the north-western corner of the field was located. Starting from this corner point, the distance between the point and the next corner point was measured and the bearing of the record from the first was read on the compass. The process was followed in a clockwise direction.

The enumerators drew sketch maps of the measured fields on graph papers indicating the measurements in chosen scales. Calculation of area of the fields was done by the enumerators using the following formula.

$$\text{AREA OF MEASURED FIELD} = \frac{SC^2}{4}$$

Where S stands for the total number of full and half or larger than half squares inside the sketch and C, for the chosen scale.

Moreover area calculation was also done by HP 3000 computer. In this report the area measurement results were taken from the computer output.

VII. FIELD OPERATION AND REFERENCE PERIOD

The field work of the survey was carried out from September 1988 to February 1989. 12 regional supervisors, 170 field supervisors and 835 enumerators were engaged in the operation.

The reference period of area under crop is related to the agricultural year.

VIII. ESTIMATION PROCEDURES

Estimation procedure is guided by the method with which the sample has been selected. Having followed certain set of rules for sample selection, the following formulas were applied for estimating a particular characteristic of the agricultural sample survey data collected during 1988/89 (1981 E.C.).

(i) Estimation of a reported characteristic of private households,

- Let X_{hij} be a total of a characteristic reported by the j^{th} selected household in the i^{th} selected Farmers' Association (FA) in the h^{th} wereda.
- A_{hijk} be measured area for a specific crop under the k^{th} field for the j^{th} household in i^{th} FA in the h^{th} wereda.
- l_{hi} number of measured fields under a specific crop in the i^{th} selected FA in the h^{th} wereda .
- m_{hi} be number of households sampled in i^{th} selected FA in the h^{th} wereda .
- M_{hi} be total number households in the i^{th} selected FA in the h^{th} wereda
- P_{hi} be probability of selection of the i^{th} selected FA in the h^{th} wereda
- n_h be number of FAs selected in the h^{th} wereda.

The estimate of a characteristic per household in the i^{th} selected FA in the h^{th} wereda will be obtained by the following formula:-

$$\bar{X}_{hi} = \frac{\sum_{j=1}^{m_{hi}} X_{hij}}{m_{hi}}$$

and the estimate of total for a reported characteristic for the h^{th} wereda in the region will be:-

$$\hat{X}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{M_{hi}}{P_{hi}} \bar{X}_{hi}$$

The regional estimate is obtained by summing up all wereda estimates of that particular region. Moreover, national estimates are obtained by aggregating regional estimates.

(ii) Area estimated on the bases of objective measurement under a specific crop for private households.

The average area per household for a specific crop in the i^{th} selected FA in the h^{th} wereda is given by :-

$$\bar{A}_{hi} = \frac{\sum_{j=1}^{m_{hi}} \sum_{k=1}^{l_{hi}} A_{hijk}}{m_{hi}}$$

and the estimate of total area under a specific crop in the h^{th} wereda is given by :-

$$\hat{A}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} M_{hi} \bar{A}_{hi}$$

The regional and national estimates can be obtained in the same manner as mentioned in VIII (i).

(iii) Estimation of sampling error.

Sampling variance of total estimate for h^{th} wereda is estimated by eliminating the FAs with in each wereda were selected with replacement. Although the variance is slightly over estimated, this assumption greatly simplifies the estimation procedure.

$$\text{Var}(\hat{X}_h) = \frac{n_h}{n_h - 1} \left(\sum \hat{X}_{hi}^2 - \frac{\hat{X}_h^2}{n_h} \right)$$

$$\text{where } \hat{X}_{hi} = \frac{M_{hi} \bar{X}_{hi}}{n_h P_{hi}}$$

Estimates of sampling variance for regional total estimate is obtained by aggregating variance estimates of the respective wereda totals. Furthermore, variance for the national total estimate is obtained by summing up variance estimates of all regions.

Some of the survey estimates take the form of a ratio of two estimates (For example, regional yield of a particular crop). This ratio estimate is given by :-

$$\hat{R} = \frac{\sum \hat{X}_h}{\sum \hat{A}_h} = \frac{\hat{X}}{\hat{A}}$$

The sampling variance of the ratio estimate is approximated by :-

$$\text{Var}(\hat{R}) = \frac{1}{\hat{A}^2} \left[\text{Var}(\hat{X}) + \hat{R}^2 \text{Var}(\hat{A}) - 2\hat{R} \text{Cov}(\hat{X}, \hat{A}) \right]$$

Percentage Coefficient of Variation is estimated by :

$$\text{CV}(\hat{X}) = \frac{\sqrt{\text{Var}(\hat{X})}}{\hat{X}} \times 100$$

IX SUMMARY OF RESULTS

PART I.

This part deals with number of households, number of members, average household size and average crop area by size of holding; and number of holders by age and type of holding; size of holding by size of households and type of crop area by size of holding in 1988/89 (1981 E.C.).

A. HOUSEHOLDS, CROP AREA AND AVERAGE CROP AREA

According to the results of the 1988/89 (1981 E.C.) Agricultural Sample Survey, the total number of private peasant households, excluding Eritrea, Tigray, Asab, Ogaden Autonomous Regions and nomadic areas, is estimated to be 6.1 million and the area under crop is about 4.9 million hectares. Thus, the average area under crop per household is estimated to be 0.80 hectare.

For the purpose of preparing this report, size group of holdings have been classified into seven groups, holding being area under cropland.

The group classifications are as follows:

Group I	-	Under 0.10 hectare
Group II	-	0.10 - 0.50 hectare
Group III	-	0.51 - 1.00 hectare
Group IV	-	1.01 - 2.00 hectares
Group V	-	2.01 - 5.00 hectares
Group VI	-	5.01 - 10.00 hectares
Group VII	-	10.01 and above hectares

According to these classifications, it is estimated that 640.54 thousand households or 10.51 percent fall in Group I; 2204.18 thousand households or 36.19 percent fall in Group II; 1547.78 thousand households or 25.40 percent fall in Group III; 1227.64 thousand households or 20.16 percent fall in Group IV, 452.67 thousand households or 7.43 percent fall in

Group V; 18.04 thousand households or 0.29 percent fall in Group VI; and 990 households or 0.02 percent fall in Group VII. Thus, about 72.10 percent of the total households are estimated to have one and less hectare each; 27.59 percent, between 1 and 5 hectares and 0.31 percent, above 5 hectares of cropland each. Hence, this is an indication that most of the households own cropland of size 0.10 - 0.50 hectare each and the next is Group III or households with cropland of size 0.51-1.00 hectare each.

However, unlike the number of households, most of the cropland fall in Group IV which consists 35.22 percent and in Group III, 25.43 percent of the total cropland.

It should be noted that only 0.02 percent of the total households own more than 10 hectares of cropland each and only 0.25 percent of the total crop area falls in holding size of more than 10 hectares. Details are given in Table 1.

Estimates of regional distribution of households, area of cropland and average area per household are presented in Table 1B (summary) and details, in Tables 2 to 27. As indicated in these tables among the administrative regions, the highest number of households is estimated for Sidamo, 504.46 thousands or 8.28 percent. The second and the third highest number of households are estimated for South Shewa, 8.11 percent and Ilubabor, 7.23 percent, respectively.

It is also indicated in these tables that it is only in East Shewa, North Shewa and Welega Administrative Regions, though few in number, that there exists households who own above 10 hectares of cropland.

Furthermore, regional contribution to the total cropland is the highest, among the regions, in West Gojam, 409.69 thousand hectares or 8.41 percent followed by South Shewa and North Shewa which contribute 409.11 thousand hectares or 8.40 percent and 400.27 thousand hectares or 8.22 percent, respectively.

On the other hand, the highest average area per household is estimated for East Shewa Administrative Region which is about 1.90 hectares followed by Addis Ababa and North Gonder Administrative Regions with 1.50 hectares and 1.45 hectares, respectively; while Dire Dawa Autonomous Region, Sidamo and North Omo Administrative Regions have the lowest average area per household when compared to the other regions. Also see Table 1B.

B. HOUSEHOLDS, MEMBERS AND AVERAGE HOUSEHOLD SIZE

The total number of members of the households in the rural area, which is of course, excluding Eritrea, Tigray, Asab and Ogaden Autonomous Regions, is estimated to be about 31,570 thousands. Furthermore, as indicated in Table 28A, the average household size ranges from 4.13 members per household in Group I to 8.82 members in Group VII. This distribution of the average member per household indicates that there are more persons per household in households with holdings of larger size. Thus, there seems to be direct relation between average household size and size of holding. From this we can observe that households with large holdings have the opportunity to use more people on the farm since they require more manpower.

Regional comparison of the survey result shows that Dire Dawa Autonomous Region has the highest average household size, i.e., 6.16 members per household. Bale, Borena and Arsi stand second, third and fourth with average household size of 5.89, 5.88 and 5.84 members, respectively. Details are given in Tables 28 to 54.

C. HOUSEHOLDS, SIZE OF HOLDING AND SIZE OF HOUSEHOLD

The estimates of households by size of holding and size of households are presented in Table 55 for the country and in Tables 56 to 81 for the regions. The percentage distributions of households by number of persons in the households are as follows:-

Of the total, 3.12 percent of the households are composed of one member; 23.42 percent of the households are composed of 2-3 members; 33.75 percent are composed of 4-5 members; 35.24 percent are composed of 6-9 members and 4.46 percent of the households are composed of 10 and above members.

D. HOLDERS AND TYPE OF HOLDING

An attempt has been made to classify the number of households by age of holder and type of holding. The type of holdings were classified into three categories as follows:-

CATEGORY I	-	CROP HOLDING ONLY
CATEGORY II	-	LIVESTOCK HOLDING ONLY
CATEGORY III	-	CROP AND LIVESTOCK HOLDING

According to this classification at national level, it is estimated that about 1,387.23 thousand holders or 22.38 percent fall in category I; 113.84 thousand holders or 1.84 percent fall in category II and 4,698.10 thousand holders or 75.79 percent fall in category III. From this, we can see that most of the peasant holders exercise mixed farming. This statement holds true for all autonomous and administrative region except for Gambela where most of the holders (55.89 percent) fall in category I; and 39.44 percent and 4.67 percent fall in category III and Category II, respectively. Furthermore, one can see that the highest number of holders fall in the age group of 30-39 years which is about 25.50 percent and the next highest is in the age group of 40-49 which accounts for about 21.33 percent of the total number of holders. Details are given in Tables 82-108.

N.B.: In the tables, the breakdowns do not add up to the total due to rounding of errors.

PART II

In this part, estimates of area under temporary and permanent crops by size of holding in relation to total crop area and households is presented.

A. CROP LAND UTILIZATION AND SIZE OF HOLDING

For the purpose of this survey the area under holding has been classified into two land-use categories, namely (i) temporary cropland and (ii) permanent cropland.

According to the above classification, it is estimated that the total area under temporary crop, is about 4,612 thousand hectares or 94.69 percent, while the area under permanent crop is about 259 thousand hectares or 5.31 percent. Details of area by type of cropland on size of holding are given in Table 109.

Regional estimates of area by type of cropland and size of holding are also given in Tables 110-162. As indicated in these tables, West Gojam, North Shewa and South Shewa Administrative Regions with 8.3 percent, 8.2 percent and 7.8 percent, respectively, have the highest percentage share of area under temporary crops among the administrative and autonomous regions. On the other hand, Sidamo with 33.5 percent, West Shewa with 12.1 percent and North Omo with 11.2 percent have accordingly the highest percentage share of area under permanent crops.

B. HOUSEHOLDS, TYPE OF CROPLAND AND SIZE OF HOLDING

As mentioned earlier in part I, the total number of households is estimated to be about 6,092 thousand. Of this total, 5,681 thousand households or about 93 percent are engaged in the cultivation of temporary crops while about 1,653 thousand households or about 27 percent are engaged in growing permanent crops. It should be noted that households which are engaged in cultivation of temporary and permanent crops are not exclusive. It is also indicated earlier that the average area under total cropland per household was estimated to be 0.80 hectare. When this is examined by type of cropland, the average area under temporary and permanent crops per household was 0.81 and 0.16 hectare, respectively,

According to the classification of size of holdings established earlier, the estimates and percentage distribution of households that grow temporary crops are as follows:-

About 421 thousand households or 7.42 percent of the total households which grow temporary crops fall in Group I; 2030 thousand households or 35.73 percent fall in Group II; 1536 thousand households or 27.03 percent fall in Group III; 1223 thousand households or 21.53 percent fall in Group IV; 452 thousand households or 7.96 percent fall in Group V, 18 thousand households or 0.31 percent fall in Group VI and about one thousand households or 0.02 percent fall in Group VII. Similarly, estimates and percentage distribution of households that grow temporary crops by holding size are given in Table 136 for the country, and in Tables 137 to 162 for the regions.

C. AREA UNDER TEMPORARY CROPS

As indicated in Table 163, the total area under temporary crops was estimated to be 4,613 thousand hectares, out of which 3,814 thousand hectares or 82.69 percent accounts for area under cereal crops; 514 thousand hectares or 11.14 percent for area under pulses; 179 thousand hectares or 3.88 percent for area under oilseeds and 106 thousand hectares or 2.30 percent for area under other crops.

Furthermore, the percentage distribution of area under cereal crops shows that 'teff' crop occupies the highest percentage which is about 33.39 percent and the next highest is maize which accounts for about 18.95 percent. The percentage distribution of area under pulses indicates that horsebeans covers the highest which is about 40.89 percent and chickpeas stands second with 17.99 percent of the total area under pulses. In the case of oilseeds, area under neug is the highest with 61.69 percent and linseed stands second with about 27.72 percent of the total area under oilseeds. Details are given in Table 163 for the country and in Tables 164 to 189 for the regions.

N.B.: In the tables, the breakdowns do not add up to the total due to rounding of errors.

B. HOUSEHOLDS TYPE OF CROPLAND AND SIZE OF HOLDING

As mentioned earlier in part I of this report, the total number of households is estimated to be about 6,093 thousand. Of this total, 2,411 thousand households or about 39 percent are engaged in cultivation of temporary crops while about 3,682 thousand households or about 60 percent are engaged in growing permanent crops. It should be noted that households which are engaged in cultivation of temporary and permanent crops are not exclusively in one category. It is also indicated earlier that the average area under permanent per household was estimated to be 0.80 hectare. When this is combined by type of cropland, the average area under temporary and permanent crops per household was 0.81 and 0.77 hectares, respectively.

According to the classification of size of holdings, as mentioned earlier, the estimates and percentage distribution of households that grow temporary crops are as follows:

About 1,171 thousand households or 48.41 percent of the total households which grow temporary crops fall in Group I; 1,171 thousand households or 48.41 percent fall in Group II; 1,171 thousand households or 48.41 percent fall in Group III; 1,171 thousand households or 48.41 percent fall in Group IV; 1,171 thousand households or 48.41 percent fall in Group V; 1,171 thousand households or 48.41 percent fall in Group VI; and about one thousand households or 41.59 percent fall in Group VII. Similarly, estimates and percentage distribution of households that grow permanent crops are given in Table 164 for the country, and in Tables 165 to 189 for the regions.

TABLE 1A DISTRIBUTION OF TOTAL NUMBER OF HOUSEHOLDS, TOTAL CROP AREA
AND CROP AREA PER HOUSEHOLD BY SIZE OF HOLDING

1988/89 (1981 E.C.)

ETHIOPIA*

HOUSEHOLDS & AREA	SIZE OF HOLDING (HECTARES)							TOTAL
	UNDER 0.10	0.10-0.50	0.51-1.00	1.01-2.00	2.01-5.00	5.01-10.00	10.01+	
NUMBER OF HOUSEHOLDS ('000)	640.54	2204.18	1547.78	1227.64	452.67	18.04	0.99	6091.84
CUMM PERCENT OF HOUSEHOLDS	10.51	46.70	72.10	92.26	99.69	99.98	100.00	100.00
TOTAL CROP AREA ('000 HECTARES)	31.76	639.32	1125.73	1715.80	1238.87	107.70	11.94	4871.02
