REPORT ON LAND UTILISATION

I. INTRODUCTION

Ethiopia's economy is predominantly agrarian and the majority of the population in the country is engaged in agriculture. In this respect, the collection of reliable, comprehensive and timely statistical information on agriculture is very essential. The information is expected to be used for the formulation of agricultural policy.

The Central Statistical Authority (CSA) has been conducting Agricultural Sample Surveys on annual basis since 1980/81 (1973 E.C.) to provide the statistical data mentioned above. The survey was interrupted in 1992/93 and 1993/94 because during these two years the CSA was fully engaged in undertaking the preparatory activities for the 1994 Population and Housing Census. However, right after undertaking the 1994 Population and Housing Census, the annual agricultural survey was resumed in November 1994.

This volume presents the objectives of the survey; coverage and content of the survey; concepts and definitions; sample design; field organization; training of field staff; method of data collection and survey results on all land uses, number of agricultural households, number of holders, number of household members, average household size and land by size of holding, number of holders by type of holding, age, sex and educational status. In addition the reader is referred to **Volume I** of the same survey which is " **Report on Area and Production of Major Crops; Private**

Holdings, Main Season, Addis Ababa, June 1995." That volume presents in its appendices survey questionnaires; number of sampled EAs, number of EAs that are actually covered and not covered in the survey; number of households planed to be covered and those actually covered in the survey for the purpose of land use , area and production of major crops and number of fields measured. Moreover, estimation procedures, standard errors and coefficient of variations for all estimates on land use, number of households by size of holding and household members by type of holding, age and sex are presented in this report.

II. OBJECTIVES OF THE SURVEY

The general objective of the agricultural sample survey was to collect basic quantitative information on the nation's agriculture that are considered essential for development planning and socio-economic policy formulation.

In particular, the objectives of the survey were also to estimate the total cultivated land; total production and yield of major crops per hectare; land under different land uses; use of agricultural inputs by type, area , quantity and cost ; number of livestock and poultry by type, purpose, sex and age; number of beehives and honey production in the private peasant holdings at national, regional and zonal levels.

III. COVERAGE AND CONTENT

The 1994/95 (1987 E.C) annual agricultural sample survey was

designed to cover sedentary rural agricultural population in all regions of the country except Somali Region. A total of 52 zones and 441 weredas were covered in the survey. The areal coverage of the survey in each region is given on **Page 3 of VOLUME I.**

Moreover, for the survey 960 enumeration areas were selected to be covered in all regions. However, during the data collection stage the survey succeeded to cover only 884 enumeration areas (EAs). For details see appendix II of Volume I. Furthermore, from each of the selected EAs a sample of 25 agricultural households were taken.

From these households, information on area under crops, production of major crops (temporary or annual), land utilization, agricultural practices, crop damage, quantity and price of agricultural inputs used, number of livestock and poultry by type, purpose, age and sex and number of beehives by type were collected. In addition, it was attempted for the first time to collect information on the yield of permanent crops per tree, frequency of harvests in the crop year and number of yielding trees during the survey year (For details refer to survey questionnaire in Appendix I of Volume I).

It should be noted here that of the sampled 25 agricultural households in the selected EAs the data collection on area measurement, crop cutting and agricultural practices were administered only on the first 15 households. Thus, a total of 12,793 agricultural households were covered for these exercises. In addition, area measurements of 74,874 fields with different crops

belonging to these households were done. For details refer to Appendix III and IV of Volume I.

As mentioned in the introduction, this report, which is one of the series of other reports and volumes of the 1994/95 annual agricultural sample survey, presents results on all land uses, number of households, holders and household members by size of holding, number of holders by age, sex and educational attainment.

IV. BASIC CONCEPTS AND DEFINITIONS

ENUMERATION AREA (EA): An Enumeration Area in rural parts of the country is a locality that is less than or equal to a farmer's association area and usually consists of 150 - 200 households.

HOLDER: A holder is a person who exercises management control over the operations of the agricultural holding and takes the major decision regarding the utilisation of the available resources. He has technical and economic responsibility for the holding. He may operate the holding directly as an owner or as a manager.

Under conditions of traditional agricultural holding the holder may be regarded as the person, who with or without the help of others, operates land or raises livestock in his own right, i.e. the person who decides on what, when, where and how to grow crops or raise livestock and has the right to determine the utilisation of the products.

HOLDING: a holding is all the land and livestock kept which is used

wholly or partly for agricultural production and is operated as one technical unit by one person alone, or with others, without regard to title, legal form, size or location.

SIZE OF HOLDING: In this report size of holding is determined by total area under different land uses, such as area under temporary crops, permanent crops, fallow land, grazing land, wood land, and other land.

HOUSEHOLD: A household may be either;

a) a one person household, that is a person who makes provision for his own food or other essentials for living without combining with any other person to form part of a multi person household or

b) a multi person household, that is, a group of two or more persons who live together and make common provision for food or other essentials for living. The persons in the group may pool their incomes and have a common budget to greater or lesser extent. They may be related or unrelated persons, or a combination of both.

AGRICULTURAL HOUSEHOLD: A household is considered an agricultural household when at least one member of the household is engaged in growing crops and/or breeding and raising livestock in private or in partnership with others.

TEMPORARY CROPS: Temporary crops are those crops which are grown with a cycle of under one year, sometimes only a few months with a

view to be sown or planted anew for further production after the harvest. Similarly, crops grown in rotation are also considered temporary crops as these are destroyed when land is ploughed.

PERMANENT CROPS: Crops which occupy land for a long period of time and are not planted for several years after each harvest are considered as permanent crops. All fruit trees (e.g. oranges, mandarins, apples, ...etc.) and trees used for beverages (like coffee, tea, ... etc.) are considered as permanent crops. Permanent meadows and pastures, however, are excluded.

GRAZING LAND : Land used for growing herbaceous forage crops, either through cultivation or naturally is considered to be grazing land.

FALLOW LAND : Land which has been or intended to be kept at rest for at least one agricultural year and a maximum idleness of less than five years is considered fallow land.

WOOD LAND : It is defined as all tracts of timber natural or planted, consisting part of the holding which have values as wood, timber, other wood products and/or for protection. However, forests used for recreational purposes are not included here.

OTHER LAND USES: Land occupied by the holders' houses or buildings, parks, gardens, barn, land under water and ponds which are part of the holding are included here.

V. SAMPLE DESIGN

The reporting levels for the 1994/95 survey were zones in

Amhara, Oromia and Southern Ethiopian Peoples' Administrative Regions and regions for the remaining regions. The five special weredas of Southern Ethiopian Peoples' Administrative Region were considered as an independent zone each.

In this survey, 960 rural enumeration areas (EAs) were sampled in 11 regions. These sample EAs were allocated to the regions taking into account their relative sizes with respect to the number of households.

A two-stage stratified sample design was used for sample selection. In Amhara, Oromia and Southern Ethiopia Peoples' Administrative Regions strata were zones and regions for the remaining regions. The primary sampling units in all strata were EAs and the ultimate sampling units were agricultural households.

In Oromia, Amhara and Southern Ethiopian Peoples' Administr -ative Regions the share of each region were reallocated to the zones in the region proportional to the sizes, size being the total number of households as obtained from the listing operation in the 1994 Population and Housing Census map work.

In each stratum (zone/region) the primary sampling units (EAs) were selected with probability proportional to size without replacement, again size being the total number of household of the EA as obtained from the census map work.

From each selected EA a sample of 25 agricultural households were selected using systematic sampling technique from the identified agricultural households in the listing form (Form 1) of

the 1994 Population and Housing Census. All holders in the selected agricultural households were covered by the survey.

Formula for variance calculation and the measure of precision of the results are given in Appendix I and II of this volume.

VI. FIELD ORGANIZATION

CSA branch statistical office heads, field supervisors and enumerators were fully involved in the survey. Hence, 14 statistical branch office heads, about 200 field supervisors, each supervising 5 enumerators in most cases and about 1000 enumerators stationed in each of the selected EAs, experts from head office, other support staff and about 40 drivers were involved in the operation.

For all enumerators the necessary survey equipment, such as compass, protractor, ruler, measuring tapes, balance scale, poles, ropes, sample bags etc. were made available and to facilitate the field work about 40 vehicles were put on operation.

VII. TRAINING OF FIELD STAFF

At the outset all relevant materials, like equipment, questionnaires and instruction manuals were prepared. Then the training programme for the field staff was carried out in two stages. In the first stage, about 90 trainees, i.e. experts from the head office, branch statistical office heads and some of the field supervisors were given training for two weeks at the head office. Those trained in the first stage conducted similar training

for about 200 field supervisors and about 1000 enumerators in all the 14 branch offices all over the country. During the training, the field staff were given detailed class room instruction on the purpose of the survey, concept and definitions of terms used, method of area measurement, method of crop cutting, interviewing procedures,... etc. The training sessions included thorough field practices with regard to data collection.

VIII. METHOD OF DATA COLLECTION

The information were collected both by objective and subjective methods of data collection. Information on area measurements(i.e. objective method of data collection) were done for the first 15 out of the 25 sampled households in which all crop areas and all land uses (crop land, fallow land, grazing land, wood land and other lands) were physically measured using compasses and measuring tapes.

Moreover, agricultural practices(use of fertilizer, use of pesticide, use of improved seed and use of irrigation), were collected subjectively by interviewing the holders in the first 15 out of the 25 sampled households with the exception to livestock, poultry and belg season for which data were collected by interviewing all the 25 sampled households.

IX SUMMARY OF RESULTS

1. Area under different land uses

During the 1994/95 (1987 E.C.) Agricultural Sample Survey data were collected on different land uses. These land uses in the private peasant holdings were land under temporary crops, land under permanent crops, grazing land, fallow land, wood land and other land not specified elsewhere.

Thus, according to the survey result (Summary Table 1), at national level, the total area under all land use was estimated to be 9476.63 thousand hectares. Out of this, 7152* hectares were under temporary crops, 539.83 thousand hectares were under permanent crops, 646.24 thousand hectares were under grazing land, 705.83 thousand hectares were under fallow land, 24.68 thousand hectares were under wood land and the rest 408.02 thousand hectares were under other land uses.

In this regard, the largest proportion of the total holdings (75.47%) was used for cultivation of temporary crops and the smallest proportion(0.26%) was used for wood land by the private peasant holders.

---

* - The difference in area between this result (7152) and that of Agricultural Practices result (i.e. 7148.25) is mainly attributed to crops like Mustard, Basil, Green beans, Rue and Spinach which were not included in **Agricultural Practices Report (Volume III).**

Summary Table 1: Area under different land uses

Type of Land Use	Area ('000 HA)	%
Land Under Temporary Crops	7,152.00	75.47
Land Under Permanent Crops	539.83	5.70
Grazing Land	646.24	6.82
Fallow Land	705.83	7.45
Wood Land	24.68	0.26
Other Land Use	408.02	4.30
All Land Uses	9,476.63	100.00

Furthermore, holdings under different land uses were classified into seven groups. These groupings are

Group I. under 0.10 hectare
Group II. 0.10 - 0.50 hectare
Group III. 0.51 - 1.00 hectare
Group IV. 1.01 - 2.00 hectares
Group V. 2.01 - 5.00 hectares
Group VI. 5.01 - 10.00 hectares and
Group VII. 10.01 and above hectares

By these groupings, as presented in Table 1.1, most of the holdings under temporary crops (36.33%) fall in group V, under permanent crop 28.42% fall in group III, under grazing land 42.72% fall in group V, under fallow land 36.03% fall in group V, under wood land 25.04% fall in group IV and under other land uses 29.50% of it fall in group IV. The details are shown in the indicated table.

In the same table, the total holding area and percentages of each group are indicated. It is estimated that the largest proportion, which is 35.06% of the total holdings was contained in group V. On the other hand, group VII the largest holding size group accounts only for 0.62% of the total holdings.

In addition the regional and zonal survey results on land uses are presented in Table 1.3 through Table 1.12. For details refer to these tables.

Note: 1- In all tables, breakdowns may not add up to total due to rounding.

2- In all tables, 0.00 is filled for data not reported.

2. AGRICULTURAL HOUSEHOLDS, TOTAL LAND AND LAND HOLDING PER HOUSEHOLD

The results of the 1994/95 (1987 E.C.) Agricultural Sample Survey indicates that the total number of agricultural households in rural areas excluding Somali Region and other nomadic areas is about 8.68 million and the area under different land use is about 9.48 million hectares. Thus, the average area under land use per household is estimated to be 1.09 hectare.

Summary Table 2: Number of Agricultural Households, Total Land Use and Average Land Holding per Household

Items	Number
Households('000)	8,684.68
Total Land Use ('000 HA)	9,476.63
Average Land holding/Household (HA)	1.09

As mentioned earlier, size of holdings have been classified into seven groups. According to the classifications, it is estimated that 502.60 thousand agricultural households fall in Group I; 2403.13 thousand agricultural households fall in Group II; 2381.41 thousand agricultural households fall in Group III; 2143.55 thousand agricultural households fall in Group IV, 1159.61 thousand agricultural households fall in Group V; 89.98 thousand agricultural households fall in Group VI; and 4.40 thousand agricultural households fall in Group VII. Thus, from this one can

see that most of the agricultural households own land of size 0.10 - 0.50 hectare each (Group II) and the next is Group III or agricultural households with land of size 0.51 - 1.00 hectare each.

However, unlike the number of agricultural households, most of the land fall in Group V which consists 35.06 percent and in Group IV, which is 31.01 percent of the total land.

It should be noted here that only 0.05 percent of the total agricultural households own more than 10 hectares of cropland each and only 0.62 percent of the total crop area falls in holding size of more than 10 hectares. Details are given in Table 2.1.

Estimates of regional distribution of agricultural households, land use and average land per household are presented in Table 2.2.

3. AGRICULTURAL HOUSEHOLDS, HOLDERS, MEMBERS AND AVERAGE HOUSEHOLD SIZE

As indicated in the summary table below, total agricultural households were estimated to be about 8.68 million and total holders were estimated to be about 8.89 million heads. Moreover, the total number of members of the agricultural households in the rural areas, which is of course, excluding Somali Region and other nomadic areas, is estimated to be about 44.94 million. On the other hand , the projected 1984 population census figures excluding the above regions for the year 1994 is around 49.7 million for rural areas. The expected difference is mainly attributed to:

1. The sample covered only sedentary rural agricultural households.
2. Excludes non agricultural households.
3. Somali Region and other nomadic areas were not covered by the survey.

Summary Table 3: Number of Agricultural Households, Holders, Household Members and Average Household Size

Items	Number
Households ('000)	8,684.68
Holders ('000)	8,893.44
Household Members ('000)	44,942.93
Average Household Size	5.17

Furthermore, as indicated in Table 3.1, the average household size ranges from 3.56 to 8.63 members per household. For details refer to the table.

4. TOTAL NUMBER OF AGRICULTURAL HOUSEHOLDS BY SIZE OF HOLDING AND SIZE OF HOUSEHOLD

The estimates of agricultural households by size of holding and size of agricultural households are presented in Table 4.1 for the country and in Tables 4.3 to 4.12 for the regions. The percentage distributions of agricultural households by number of persons in the agricultural households are summarized as follows.

Of the total agricultural household, 3.13 percent are composed of one member; 23.77 percent are composed of 2-3 members; 32.84 percent are composed of 4-5 members; 35.41 percent are composed of 6-9 members, 4.56 percent are composed of 10 and above members and the others 0.28% (about 24.65 thousand) did not report their household size (See Summary Table 4 below).

This indicates that most of the agricultural households have 6 - 9 members and a one member agricultural households are few in number.

Summary Table 4: Total number of agricultural households by size of household

Size of Household	Household	
	Number('000)	%
One Member	272.12	3.13
2 - 3 Members	2,064.40	23.77
4 - 5 Members	2,852.43	32.84
6 - 9 Members	3,075.43	35.41
10 and above	395.65	4.56
Household Size Not Stated	24.65	0.28
Total	8,684.67	100.00

5. NUMBER OF HOLDERS BY AGE AND TYPE OF HOLDING

An attempt has been made to classify the number of agricultural households by age of holder and type of holding. The type of holdings were classified into three categories and these are:-

CATEGORY I. CROP HOLDING ONLY

CATEGORY II. LIVESTOCK HOLDING ONLY

CATEGORY III. CROP AND LIVESTOCK HOLDING

According to this classification, at national level, it is estimated that about 1,733.19 thousand holders or 19.49 percent fall in category I; 189.74 thousand holders or 2.13 percent fall in category II, 6,935.06 thousand holders or 77.98 percent fall in category III and the others 35.40 thousand (0.40%) did not report their holding type. Refer to the summary Table below.

From this, we can see that most of the peasant holders exercise mixed farming. This statement holds true for all regions and zones. See Tables 5.3. - 5.12.

Summary Table 5: Total Number of holders by Type of Holding

Type of holding	Total Holders	
	Number	%
Crop Only	1733.19	19.49
Livestock Only	189.74	2.13
Crop and Livestock	6935.06	77.98
Holding not stated	35.40	0.40
All Holding	8893.40	100.00

Furthermore, one can see that the highest number of holders fall in the age group of 30-39 years (25.46%) and the next highest is in the age group 40-49 which comprises 21.07% of the total number of holders.

7. NUMBER OF HOLDERS BY EDUCATIONAL ATTAINMENT AND TYPE OF HOLDING

For the purpose of this report, educational attainment was categorized in to seven groups and these are:

1. Illiterate:- who can not read and write
2. Attended/Completed grade 1 - 3
3. Attended/Completed grade 4 - 6
4. Attended/Completed grade 7 - 8
5. Attended/Completed grade 9 - 11
6. 12 Grade complete
7. Attended higher education institutions

Accordingly, out of the total 8893.40 thousand holders, 6798.95 thousand (76.45%) were illiterate, 1161.16 thousand have attended or completed grades 1 - 3, 507.85 thousand have attended or completed grades 4 - 6, 214.99 thousand have attended or completed grades 7 - 8, 114.75 thousand have attended or completed grades 9 - 11, 35.14 thousand have completed grade 12 and the others 47.08 thousand have not reported their educational attainment and type of holding.

From the summary table we can see also that most of the holders are illiterate. In addition one can observe that in the country 13.45 thousand holders (0.15%) were reported to have attended higher educational institutions.

Summary Table 7: Number of Holders by Educational Attainment

Education Status	Total Holders	
	Number('000)	%
Illiterate	6798.95	76.45
Grades 1 - 3	1161.16	13.06
Grades 4 - 6	507.85	5.71
Grades 7 - 8	214.99	2.42
Grades 9 - 11	114.75	1.29
12 Grade Complete	35.14	0.40
Higher Education	13.45	0.15
Education & Holding Not Stated	47.08*	0.52
Total	8893.40	100.00

* - 11.68 thousand of them did not report their educational attainment and the others 35.40 thousand did not report their holding type.

The national result is presented in Table 7.1 and regional and zonal results are shown in Tables 7.3 - 7.12, for details, please refer to these tables.

8. NUMBER OF AGRICULTURAL HOUSEHOLDS, CROP LAND AND AVERAGE CROP LAND BY TYPE OF CROP AND SIZE OF HOLDING

As mentioned earlier, the total number of agricultural households is estimated to be about 8,684.67 thousand. Of this total, 7,949.18 thousand agricultural households are engaged in the cultivation of temporary crops while about 3,321.04 thousand agricultural households are engaged in growing permanent crops. It should be noted here that agricultural households which are engaged in cultivation of temporary and permanent crops are not exclusive (i.e. households might grow both permanent and temporary crops and could be counted twice). It is also indicated earlier that the average crop land for total cropland per household was estimated to be 0.89 hectare. When this is examined by type of cropland, the average crop land under temporary and permanent crops per household was 0.90 and 0.16 hectare, respectively (See Table 8.1).

Summary Table 8: Land under Temporary and Permanent Crops

Items	Number
Land under Temporary Crops('000 HA)	7152.00
Households reporting Temp. Crops('000)	7949.18
Land under Permanent crops('000 HA)	539.83
Households reporting Perm. Crops('000)	3321.04

9. ESTIMATES OF AREA UNDER TEMPORARY CROPS BY SIZE OF HOLDING

As indicated in Table 9.1, the total area under temporary crops was estimated to be about 7,152.03 thousand hectares, out of which 5,746.01 thousand hectares is under cereal crops; 878.44 thousand hectares is under pulses; 342.12 thousand hectares is under oilseeds and 185.46 thousand hectares is area under other crops (See summary Table 9).

Summary Table 9: Area under Temporary Crops

Type of Crop	Area	
	'000 Hectares	%
Cereals	5746.01	80.34
Pulses	878.44	12.28
Oilseed Crops	342.12	4.78
Other Temporary Crops	185.46	2.59
Total	7152.03	100.00

Furthermore, the distribution of area under cereal crops shows that teff occupied the highest area, that is 1843.76 thousand hectares (32.09%) and the next highest by maize which is 1104.71 thousand hectares.

The distribution of area under pulses indicates that horse beans covers the highest, that is about 38.92 percent and chick peas stands second with 19.93 percent of the total area under pulses.

In the case of oilseeds, area under neug is the highest with 57.62 percent and linseed stands second with about 32.42 percent of the total area under oilseeds.

Details are given in Table 9.1 for the country and in Tables 9.2 to 9.11 for the regions and zones.

APPENDIX I

ESTIMATION PROCEDURES OF TOTAL, RATIO AND SAMPLING ERROR

APPENDIX I

ESTIMATION PROCEDURES OF TOTAL, RATIO AND SAMPLING ERRORS.

The following formulas are used to estimate total area of land under specific land use in a given stratum.

$$\hat{A}_h = \sum_{i1}^{n_h} w_{hi} a_{hi}$$

in which

$$W_{hi} = \frac{N_h M_{hi}}{n_h N_{hi} m_{hi}}$$

is the weight

where h represents the stratum.

n_h is the total number of EAs selected in h^{th} stratum.

N_h is the measure of size of the h^{th} stratum obtained from the sampling frame.

N_{hi} is the measure of size of the i^{th} sample EA in the h^{th} stratum obtained from the sampling frame.

M_{hi} is the total number of agricultural households of the i^{th} sample EA in the h^{th} stratum obtained from households listing of the survey.

m_{hi} is number of sample agricultural households of the i^{th} sample EA in the h^{th} stratum.

a_{hi} is the sample total of area values in the i^{th} EA in the h^{th} stratum for the specific land use.

$\hat{A}_h$ is estimate of total area under specific land use in the h^{th} stratum.

Moreover, sampling variance of estimate of stratum total of area for a specific land use is estimated by the following formula.

$$Var(\hat{A}_h) = \frac{n_h}{n_h - 1}\left[\sum_{n1}^{n_n} \hat{A}_{hi}^2 - \frac{\hat{A}_h^2}{n_h}\right]$$

In estimating the sampling variance by the above formula, selection of EAs within a stratum are assumed to be with replacement. By so doing the variance estimate may be slightly over estimated but it greatly simplify the estimation procedure. Further more the finite population correction (fpc) is ignored in the formula. This is due to the fact that its effect is negligible.

Households, holders and members are estimated in the same manner mentioned above.

Some of the survey estimates take the form of a ratio of two variables (For example, average land holding per household). This ratio estimate is given by :-

$$\hat{R}=\frac{\Sigma\hat{A}_h}{\Sigma\hat{H}_h}=\frac{\hat{A}}{\hat{H}}$$

where $\hat{H}_h$ is estimate of households in the stratum h

The sampling variance of the ratio estimate is approximated by:-

$$Var(\hat{R})=\frac{1}{\hat{H}^2}\left[Var(\hat{A})+\hat{R}^2 Var(\hat{H})-2\hat{R}Cov(\hat{A},\hat{H})\right]$$

Coefficient of Variation for a total of characteristic A in percent is estimated by :

$$CV(\hat{A})=\frac{\sqrt{VAR(\hat{A})}}{\hat{A}}x100$$
