PREFACE

Subsequent to the 1984/85 drought and consequent famine, which affected especially the northern parts of the country, a major resettlement programme has been undertaken. The government was involved in moving over half a million people who had no prospect of being self-sufficient in their old habitat which mainly consisted of degraded lands. After resettlement the government supported the settler families by providing them with food, health care, clothing, etc. until they were able to support themselves. The government also built basic community infra-structures and amenities such as schools, health stations, roads and facilitated the provision of potable water systems, market places, flour mills, etc.

Following the beginning of the resettlement programme many concerned governmental and nongovernmental agencies have been closely following up developments in these areas. The government and a number of nongovernment organizations were involved in helping and assisting settlers adjust smoothly to their new environment, conditions and ways of life. Some attempt was also made to collect some data in order to document these events and developments both to capture their historical attributes and to draw appropriate lessons for any possible future resettlement programmes.

The above mentioned efforts were no substitute for the type of desired quantitative information needed by both government and nongovernment organizations concerned with the monitoring and evaluation of developments of various aspects of the resettlement programme and the resettled population. The Central Statistical Authority (CSA) as the most appropriate government body regarding the provision of such information, with financial assistance of the International Development Research Center (IDRC) of Canada and the Canadian International Development Agency (CIDA) undertook a programme of data collection activities in 1988 in all the resettlement areas, covering a wide range of socio-economic fields.

The planning and implementation of the data collection and subsequent data processing, analysis and report writing was coordinated by the General Manager of CSA assisted by a committee of six experts drawn from various departments of the Authority. Each committee member was responsible for at least one survey from the beginning (preparations) to the end (analysis and report writing). The committee which was formed in early 1987 was responsible for the preparation of all major aspects of all the surveys including the planning of the studies, development of the design and methodology, finalizing questionnaires and instruction manuals, planning and following up the recruitment, training and deployment of field staff and the conduct of data collection and processing.

The data collection activities materialized in May and June 1988 during which period a census of the resettled population was undertaken followed by a number of baseline socio-economic sample surveys which included an Agricultural Survey; Health and Nutrition Survey; Income, Consumption and Expenditure Survey; Demographic Change Survey and Community Level Variables Survey. The results of these studies are expected to provide valuable information on the state of the re-settled population.

The community level variables survey, which is the subject of this report, was concerned with generating useful data on the availability and basic characteristics of various socio-economic and cultural facilities and amenities in the resettlement communities. The data collected through this survey were manually processed and the results are given in 38 tables in the main body of this report. Makonnen Tekle-Haimanot, currently head of the Social and Housing Statistics Department, has been responsible for preparing this report. His main assistant in this endeavour was Abebaw Ferede, currently statistician in the Education, Culture and Sports Experts Team of the above department.

This study would not have been possible without the financial assistance of the International Development Research Center (IDRC) of Canada and the Canadian International Development Agency (CIDA). The CSA wishes to express its appreciation for the financial assistance provided by IDRC and CIDA.

Thanks are also due to the regional party and government officials for their invaluable assistance in the successful execution of the field work, and to the staff of the CSA for their efforts in undertaking the data collection and compilation work as well as the preparation of this report. I am confident the results of this survey will furnish useful information for policy makers, planners and administrators concerned with the present and future resettlement programmes.

Mitik Beyene

INTRODUCTION

Following the 1984/85 drought and the subsequent famine that struck a major part of the drought affected areas, over half a million people have been resettled from the impoverished and relatively densely populated areas which had recurred drought, in more fertile lands in the western and south western parts of the country. Since then several government and non-government agencies have been following up developments in these areas and helping settlers adjust smoothly to their new environments and living conditions.

In order to adequately monitor developments in these resettlement areas and, assist settlers effectively, these agencies need statistical data on many fields. Consequently, in 1988 the Central Statistical Authority, with the assistance of the International Development Research Center (IDRC) of Canada, launched a programme of data collection in the resettlement areas covering a wide range of socio-economic fields. One of these was a Survey of Community Level Variables. This survey was undertaken in May 1988 and its results are given in this report.

Since the main point in undertaking this survey was to provide data on the availability of basic socio-economic services and amenities in the communities, the information contained in this report is limited to presenting data in tabular forms at the level of the lowest administrative unit of the time. It is hoped that the data presented here will be useful to planners, administrators and managers in planning and implementation of such new facilities and services and improving existing ones.

1. OBJECTIVES AND SCOPE OF THE SURVEY.

In this survey "community" or "Resettlement area" refers either to any "Resettlement Village" which was uninhabited prior to being resettled by new comers or any sparsely populated "Farmers Association" into which some settlers were added.

1.1 - Objectives of the Survey -

This survey concerned itself with collecting data pertaining to common amenities, socio-economic and cultural facilities in all

resettlement communities. The main objective of undertaking this survey is to assess the basic socio-economic facilities existing in each resettlement community. The following are the specific objectives of the survey:

- (a) To collect data on the availability of transport and communication facilities in resettlement communities;
- (b) To collect data on the availability of educational facilities in resettlement communities;
- (c) To collect data on the availability of Health Facilities in resettlement communities;
- (d) To assess the availability of natural resources such as potable water, fire wood,...etc. in resettlement areas or their immediate surroundings;
- (e) To collect data regarding agricultural service and producers co-operatives and handicraft service co-operatives in the resettlement communities and immediate surroundings;
- (f) To collect data regarding the availability of some socio-economic facilities such as market place, flour mill.... etc. in the resettlement communities;
- (g) To make some assessment of specific aspects of agricultural conditions in the resettlement communities;
- (h) To provide some information on specific aspects or problems of social integration in resettlement communities.

1.2 - Scope of the Survey:

Data were collected for such resettlement communities and the types of data that have been collected may be summarized as follows:

- (a) On availability of transport and communication facilities in resettlement communities or their immediate surroundings: existence of all weather road in the area, if not distance in Kms., to the nearest all weather; road existence of dry weather

road in the area, if not distance in Kms., to the nearest dry weather road; existence of postal service in the area, if not distance in Kms. to the nearest postal service.

- (b) On educational facilities available in resettlement communities (i.e. Schools, Kindergartens, Literacy Programmes, and public reading rooms): existence of Primary schools in the area, if not distance in Kms., to the nearest primary school; existence of Junior Secondary school, Senior Secondary school, literacy programme, public reading room and Kindergarten in the area.
- (c) On availability of health care facilities in the resettlement communities: existence of maternal and health care service, trained traditional mid-wife and supplemental feeding programme in the area.
- (d) On availability of co-operatives in the resettlement communities: existence of farmers producers co-operatives in the area, membership of the areas in any farmers service co-operatives and handicraft service co-operatives.
- (e) On suitability of land and weather condition of resettlement areas for agriculture: existence of agricultural development extension agent in the area, whether forest clearing and burning is practiced in the area, availability of adequate number of farm animals in the area, and type of animal diseases in the area, suitability of land for agriculture.
- (f) On sources of water supply for the resettlement communities: availability of adequate water supply during the dry and rainy seasons within the area, if not available, distance, in Km., of the nearest water supply.
- (g) On availability of fire-wood in the resettlement communities: Is dequate fire-wood available in the dry and rainy seasons in the area? If not available distance, in Km., to the nearest source of fire-wood.

- (h) On availability of market places in the resettlement communities: existence of market place in the area; if not distance in Kms., to the nearest market place.
- (i) On availability of flour mills in resettlement villages: existence of flour mill in the area, if not distance in Kms., to the nearest flour mill.
- (j) On problems of social integration in resettlement communities: existence of linguistic problems among the residents, problems of marriage and other problems of living together or social integration in the area.

2. METHODOLOGY AND COVERAGE.

The unit of enumeration was the resettlement village or the farmers association. Each resettlement village or farmers association where resettlement (both conventional and integrative refer to next section for meaning) has taken place was covered by the survey, Resettlement has taken place in parts of the regions of Gojjam, Gonder, Illubabor, Kefa and Wellega and hence the survey covered all the resettlement villages and farmers associations in all five regions.

This survey was conducted together with the population census of the resettlement areas during May 1988. Data, about each resettlement area were collected by an assigned enumerator and/or the concerned field supervisor and the method of data collection was interview. The respondent in each resettlement areas was mostly the relevant farmers association or resettlement village executive committee. The interviewers for this survey were the same interviewers used for the population census. A two days training was given to the interviewers at regional capitals.

3. FIELD ORGANIZATION AND SURVEY OPERATION

The field organization and survey operation for this survey was organized together with the population census. Once recruitment and training was over at least one interviewer was assigned to every resettlement area/farmers association to collect data on community level variables as well

as other subjects or fields. The data collection activities or the interviewers were immediately controlled and monitored by field supervisors and the number of supervisors was such that, on the average, there was one supervisor for each five interviewers. Above the supervisors were members of the teams of trainers who were continuously checking the efficiency and accuracy of the entire data collection activities by the interviewers and supervisors.

In all 1298 resettlement villages/farmers associations (214 conventional resettlements villages plus 1084 farmers associations where integrative resettlement has occurred) were covered by the survey. The data collections for this survey was undertaken immediately after the population census and it took one to two days to complete the questionnaire in all the resettlement villages/farmers associations.

4. SURVEY RESULTS.

The results of this survey have been compiled manually in Tables 1 to 38 which are presented below. The tables can be grouped as follows:-

1: Table on type of Resettlement

1.1. Distribution of resettlement areas by resettlement type (Table 11).

2. Basic services and amenities: Tables 2-24

2.1. Transport and communication (Tables 2-6)

2.2. Education (Tables 7-11)

2.3. Health (Tables 12-16)

2.4. Water supply (Tables 17-18)

2.5. Fire-wood (Tables 19-20)

2.6. Market facilities (Tables 21-22)

2.7. Flour mills (Tables 23-24)

3. Problems of Social Integration: Tables 25-28

3.1. Language Problems (Table 25)

3.2. Problems in getting married and of divorce (Tables 26-27)

3.3. Other problems (Table 28)

4. Agricultural conditions: Tables 29-38

- 4.1 Suitability of land and weather conditions and agricultural practices (Tables 29-31)
- 4.2. Availability of farm animals and animal disease (Tables 32-34)
- 4.3. Availability of co-operatives and extension agents (Tables 35-38).

5. DEFINITION OF TERMS USED IN THE TABLES.

In order to fully grasp what is presented in the tables it is necessary to understand the meaning of each term or word in the Tables. Therefore, it has been found necessary to briefly define some of the terms whose meanings were considered to be not too obvious.

CONVENTIONAL type of Resettlement is the type of resettlement in which people from drought affected areas were moved and resettled in uninhabited areas (Table 1).

INTEGRATIVE type of Resettlement was the type of resettlement in which drought affected people were moved and resettled in already inhabited, but sparsely populated areas, by insertion so to speak (Table 1).

PRIMARY, JUNIOR SECONDARY and SECONDARY SCHOOLS (Table 7).

PRIMARY SCHOOL, as its name implies is the first level of schooling and includes, in Ethiopia, grades 1-6.

JUNIOR SECONDARY SCHOOL is the second level, first stage of schooling and includes, in Ethiopia, grades 7 and 8.

SENIOR SECONDARY SCHOOL is the second level, second stage of schooling and includes grades 9-12.

LITERACY PROGRAMME (Table 9). An ever expanding and relatively intensive Literacy Campaign Programme has been going on continuously since July 1979. The aim of this campaign has been to eradicate illiteracy from the face of the country. As the ever expanding literacy campaign has been covering more and more areas of the country as time went on data were collected through the survey on the availability of a literacy programme in each of the resettlement areas.

PUBLIC READING ROOM (Table 10). To ensure that newly literate persons do not relapse to illiteracy residents of resettlement areas, as well as of farmers associations (in rural areas) and Kebeles (in Urban areas) have been encouraged and given practical support to establish reading rooms. Thus, data were collected through the survey on the availability of a reading room in each resettlement area.

HEALTH FACILITIES (Tables 12-14). The organization of Health Service System in the country at the time of the survey can be described as follows. At the bottom is the farmers association or the Kebele urban dwellers association based COMMUNITY HEALTH AGENT. Above it is the HEALTH STATION or CLINIC next to which is the HEALTH CENTER. Then there is the Medium/Rural Hospital above which is the Regional Hospital and at the top of all this is the Central Referral Hospital. Except for the community Health Agent every type of health service facility (mentioned above) serves as a referral institution or hospital for the type(s) of institution(s) below it as well as rendering service to patients who refer there directly or for the first time.

SUPPLEMENTAL FEEDING PROGRAMME (Table 16). In a country like Ethiopia where adequate knowledge about nutrition is low and food shortage, especially due to repeated drought, is prevalent vulnerable population groups are easy victims of malnutrition. To fight such problems supplemental Feeding programmes have been established by the government as well as non-governmental organizations in many of the resettlement areas. So these programmes cater mainly to vulnerable population groups by providing them with locally scarce but nutritionally important food types and advice on the importance of and how to use such food types and on elementary nutrition.

LINGUISTIC PROBLEMS among residents (Table 25). Since settlers in a number of resettlement areas have come from different areas of the country belonging to various ethnic groups and speaking different languages, it is reasonable to expect linguistic problems among residents. So data were collected on whether there were any linguistics problems among the residents.

PROBLEMS OF SOCIAL INTEGRATION (Table 28). Coming from different areas and belonging to different Ethnic groups with varying cultural values and norms residents of resettlement areas may encounter difficulties in living together harmoniously. Linguistic difficulties, problems of marriage, and other related social problems may arise in the communities. Such social difficulties may be

referred to as PROBLEMS OF SOCIAL INTEGRATION.

AGRICULTURAL DEVELOPMENT EXTENSION AGENT (Table 35) is a person, who having been trained in agriculture in an agricultural school or college, is assigned in a community or communities to advice farmers on many aspects of agricultural work and thus assist in increasing agricultural products by farmers in the community.

FARMERS PRODUCERS CO-OPERATIVE (Table 36) is a body, established according to and supported by government proclamation, formed by a number of peasants or farmers who partially or wholly renounce their private ownership of means of agricultural production in favour of collective control and ownership to enhance economic viability and common economic security. Land is, of course, free. Such co-operatives have four stages of development (including those at their inception or primary stage) and the survey was interested in co-operatives at any of the four stages.

FARMERS SERVICE CO-OPERATIVE (Table 37) is a body formed by two or more resettlement villages/farmers associations to facilitate and ease their access to farm implements and related instruments, improved seeds, fertilizers and financial and other forms of loans, to facilitate substitution of traditional farming methods by more modern and advanced methods, better storage and marketing, access to consumer goods at reasonable prices and making savings.

HANDICRAFT SERVICE CO-OPERATIVE (Table 38) is a body formed by a varying number of handicraft-persons, who are residents of more than one resettlement village and/or farmers association, to facilitate access to raw materials, handicraft implements and related instruments, marketing and related facilities at reasonable prices.
