I. Introduction

The Central Statistical Authority, (CSA), has been conducting the Rural Integrated Household Survey Program, (RIHSP), since 1980/81 (1973 Ethiopian Calendar, E.C.). As part of the RIHSP the rural price survey, which covers both retail and producers' prices, is being conducted on a monthly basis since 1980 in selected Farmer Associations, (FAs), (currently Enumeration Areas, EAs) of the country.

This report provides information on average producers' price of agricultural products in rural areas from March 1997 to May 1997 (Megabit 1989 – Ginbot 1989 E.C.) on the basis of the current administrative hierarchy, i.e., Kilil/regional states and group of zones. Due to lack of adequate space to accommodate all kilils in one page the price data of the kilils are presented in two parts.

Part I - Consists of Tigray, Afar, Amhara (and its group of zones) and Oromiya (and its group of zones).

Part II - Consists of Somali, Benshangul and Gumuz, Debub Hizboch, [Southern Nations, Nationalities and Peoples, (S.N.N.P.)] (and its group of zones), Gambela, Harari, Dire Dawa and Addis Ababa.

Price data for Amhara, Oromiya and Debub Hizboch kilils are presented according to their respective group of zones¹ and kilil average. For the remaining kilils price data are presented by kilil. Group of zones for Amhara, Oromiya and Debub Hizboch kilils are given below:

Group of zones for Amhara Kilil

- 1 = North and South Gonder
- 2 = East Gojam, West Gojam and Agewawi
- 3 = North Welo and Wag Hamra
- 4 = South Welo, North Shewa and Oromiya zone

¹ Report for the three Kilils is provided in group of zones due to their relatively large area coverage as compared to others.

Group of zones for Oromiya Kilil

- 1 = East and West Welega
- 2 = Ilubabor and Jima
- 3 = North and West Shewa
- 4 = East Shewa, Arsi, Bale and Borena
- 5 = East and West Hararge

Group of zones for Debub Hizboch Kilil

- 1= Yem, Keficho, Maji, Shekicho and Bench
- 2= North and South Omo, Derashe and Konso
- 3= Hadia, Kembata and Gurage
- 4= Sidama, Gedeo, Burji and Amaro.

This seventieth issue updates Statistical Bulletin 173. Earlier issues on the same subject are Statistical Bulletins 44, 59, 65, 85, 95, 105, 116, 122, 137, 142,148, 149 155, 162 166 and 173.

II. Objectives

The objectives of the survey are to:

- help policy makers take decisions on production and distribution of agricultural products;
- study the level of producers' price of agricultural products charged by farmers;
- study the disparities between prices at various distribution levels;
- study changes in the economy;
- help in the valuation of output for national accounts;
- construct producers' price indices and volume of production with respect to agricultural commodities.

III. Scope, Coverage and Sample Design

The scope and coverage of the survey are constantly under review and necessary improvements are effected from time to time in an effort to incorporate commodities mostly produced by farm holders.

The major groups of items covered by the survey include cereals, pulses, oil seeds, vegetables, fruits, spices, livestock, draught animals, dairy products and eggs, hides and skins and others.

A two-stage stratified sample design was used for the 1996/97 (1989 E.C.) price survey. In three Kilils, namely Amhara, Oromiya and Debub Hizboch, groups of contiguous zones were treated as strata/reporting levels of the survey results. In the remaining regions, the reporting levels were the kilils themselves. The primary sampling units in all strata were Enumeration Areas, (EAs). Agricultural households were the ultimate sampling units.

A fixed number of sample EAs was determined for each stratum/reporting level based on population size of the stratum and cost considerations. The overall sample number of EAs in a stratum was proportionately allocated to Zones/Special Weredas within the stratum to their household size. From within each stratum sample EAs were selected with probability proportional to size (PPS), size being the total number of households of the EAs as obtained from the 1994 census map work. From each sample EAs, 25 agricultural households were selected systematically without replacement. Information on producer's price of selected agricultural commodities is collected from farm households or producers' cooperative residing in the sample EAs.

A total of 705 EAs in the country were planned to be covered by the survey. But 4 of the sampled EAs were closed due to various reasons and the survey covered 701 EAs successfully. The distribution of sample EAs and actually covered EAs by stratum or reporting level is given in Table A.

Table A: Number of Sampled and Actually Covered EAs in the Survey by Kilil

Kilil	Strata	Number of	
		Sampled EAs	Covered EAs
Tigray	1. Tigray	35	33
Afar	2. Afar	25	24

Addis Ababa	20. Addis Ababa	25	25
Dire Dawa	21. Dire Dawa	25	25
Total		705	701

IV. Method of Data Collection

Agricultural producers' price is collected from farm households or producers' cooperatives in the selected EAs for each month of the Ethiopian Calendar year, (September to August). For each agricultural product a maximum of three quantity and price quotations are collected from three different farmers using Kitchen balance to measure quantities sold. However, it should be noted that information on producers' price is collected from a farmer or producer who sold the output of his agricultural holding during the survey month. The data collection of producers' price is distributed throughout the month considering the work load of the enumerator and the selling habits of the farmers.

V. Definitions

- **Producers' price:** Agricultural producers' price is defined as the price of the transaction carried out by the farmer at the first point of sale for a clearly specified agricultural commodity. In most cases this price may not correspond to the farm-gate price as the farmer sells his product at a place outside his farm.
- **Enumeration Area:** Enumeration Area in rural areas is a locality that is less than or equal to farmer's association areas and mostly consists of about 150-200 households.
- **Farmers' Association:-** It is the lowest administrative unit in a settled rural area with its own jurisdiction. It is an association of rural dwellers formed by the inhabitants of a given area whose members are engaged either in agricultural or non-agricultural activities.

VI Note

- ◆ The average column is a simple arithmetic average price for each item.
- ◆ The symbol "-" is used for data not available or doubtful.

IV. Methodology

Agricultural products are produced by farmers who are selected for their ability to produce high quality products. The information on the quality of the products is the result of the sampling process. The data is then analyzed to determine the relationship between the quality of the products and the farmer's characteristics.

V. Definition

- **Production:** The process of creating goods and services. It is carried out by the farmer who uses his own resources and those of the community. In this paper, the production of agricultural products is considered.
- **Quality:** The characteristic of a product that makes it desirable. It is determined by the farmer's characteristics and the quality of the inputs used.
- **Sampling:** The process of selecting a representative sample of the population. It is carried out by the researcher who uses a random sampling method.
- **Analysis:** The process of examining the data to determine the relationship between the variables. It is carried out by the researcher who uses statistical methods.

VI. Notes

The data used in this study were obtained from the farmer's records. The data were analyzed using statistical methods. The results of the analysis are presented in the following sections.
