1. INTRODUCTION

Agriculture is the dominant feature of the economy in which the livestock subsector is an integral part. Livestock and livestock products play an important role in the socio-economic development of many countries. Especially in many developing countries there is a growing demand for livestock products such as meat, milk and eggs to improve the nutritional status of the population.

Thus, Ethiopia is one of the developing countries where livestock and livestock products are important component of the agricultural sector. It is the livelihood of the majority of the population and generates foreign export earnings. Moreover, livestock help as a source of security and supplementary cash income for rural agricultural households. Draught animals provide power for the cultivation of many peasant agricultural holdings and supply the farm yards manure needed for the enrichment of the soils. In view of the above facts, if the livestock sub-sector is developed on a proper line, its contribution in the national self sufficiency program in agricultural production would be significant. Therefore, statistical information is highly essential on livestock and livestock products for the formulation of agricultural policy.

Since 1980/81 (1973 E.C.) the Central Statistical Authority has been conducting Agricultural Sample Survey on annual basis to provide this information. However, urban and nomadic areas were excluded in the survey. This report, which is prepared for the first time, presents the objectives of the survey; coverage and content of the survey; basic concepts and definitions; sample design; field organization; training of field staff; method of data collection and results on number

of holders reporting livestock, poultry and beehives and number of livestock, poultry and beehives under different size of holdings .

Likewise, standard errors and coefficient of variation for estimated number of livestock and poultry and number of holders reporting livestock and poultry under different size of holdings are presented in the appendix at national and regional levels.

2. OBJECTIVES OF THE SURVEY

The general objective of the agricultural sample survey was to collect basic quantitative information on the nation's agriculture that are considered essential for development planning and socio-economic policy formulation.

In particular, the objective of the survey were to estimate the total cultivated land; total production and yield of major crops per hectare; crop land uses (temporary and permanent); quantity and cost of agricultural inputs by type; number of livestock and poultry by type, purpose, sex and age; number of beehives and honey production in the private peasant holdings at national, regional and reporting levels.

3. COVERAGE AND CONTENT

The 1995/96 (1988 E.C.) agricultural sample survey was designed to cover sedentary rural agricultural population in all regions of the country. Urban and nomadic areas were not included in the survey. Accordingly, a total of 54 zones and 367 weredas were covered by the survey. The areal coverage of the survey in each region is given on page 3 of Volume II of the same survey.

A total of 620 Enumeration Areas(EAs) i.e. 1.1% of the total agricultural EAs in the country were selected to be covered in all regions. But 9 of the sampled EAs were closed due to various reasons and the survey covered 611 EAs successfully. For details see **Appendix II** of **volume II**.

From each sampled Enumeration Area a total of 25 agricultural households were selected. Information was collected on type, number and characteristics of livestock, poultry and beehives from a total of 14923 agricultural households. For details see **Appendix III** of **volume II**.

In this report, which is Volume VI of the 1995/96 annual agricultural sample survey information on number of holders reporting livestock and poultry and number of livestock by type, sex, age category, number of poultry by kind and number of beehives by type under different groups of size of crop land areas for the country, regions and group of zones taken as reporting levels are presented.

4. BASIC CONCEPTS AND DEFINITIONS

The concepts and definitions used in the survey are defined as follows.

Enumeration Area(EA): An Enumeration Area in rural parts of the Country is a locality that is less than or equal to a farmer's association area and usually it consists of 150-200 households.

Households: A household may be either;

a) a one person household, that is a person who makes provision for his own food or other essentials for living without combining with any other person to form part of a multi person household or

b) a multi person household, that is, a group of two or more persons who live together and make common provision for food or other essentials for living. The persons in the group may pool their incomes and have a common budget to greater or lesser extent. They may be related or unrelated persons, or a combination of both.

Holder: A holder is a person who exercises management control over the operations of the agricultural holding and takes the major decision regarding the utilisation of the available resources. He has technical and economic responsibility for the holding. He may operate the holding directly as an owner or as a manager.

Under conditions of traditional agricultural holding the holder may be regarded as the person, who with or without help of others, operates land or raises livestock in his own right, i.e. the person who decides on what, when, where and how to grow crops or raise livestock and has right to determine the utilisation of the products.

Holding: A holding is all the land and livestock kept which is used wholly or partly for agricultural production and is operated as one technical unit by one person alone, or with others, without regard to title, legal form, size or location.

Agricultural Households: A household is considered an agricultural household when at least one member of the household is engaged in growing crops and/or breeding and raising livestock in private or in partnership with others.

5. SAMPLE DESIGN

A two-stage stratified sample design was used for the 1995/96 (1988 E.C.) Annual Agricultural Sample Survey. In three regions, namely, in Amhara, Oromiya and Southern Nations, Nationalities and Peoples' Region, groups of contiguous zones were treated as strata/reporting levels of the survey results. In the remaining regions, the reporting levels were the regions themselves. The primary sampling units in all strata were Enumeration Areas (EAs).

A fixed number of sample EAs was determined for each stratum/reporting level based on precision of estimates, household size of the stratum and cost considerations. The overall sample number of EAs in a stratum was proportionately allocated to zones/special weredas within the stratum to their population size. From within each Zone/Special wereda sample EAs were selected with probability proportional to size, size being the total number of households of EAs as obtained from the 1994 census map work. From each sampled EA, 25 agricultural households were sampled systematically without replacement from a fresh list of agricultural households.

The livestock survey questionnaire were administered to all agricultural holders in the sampled 25 agricultural households.

6. FIELD ORGANIZATION

The branch statistical office heads of the Central Statistical Authority, field supervisors and enumerators were fully involved in the survey. Hence, 15 statistical branch office heads, about 140 field supervisors, each supervising 5 enumerators in most cases and about 651 enumerators (including reserve enumerators) stationed in each of the selected EAs, experts from head office, other support staff and about 62 drivers were involved in the operation.

For all enumerators, the necessary survey equipment such as compasses, protractors, rulers, measuring tapes, balance scales, poles, ropes, sample bags, ...etc. were made available for the survey. Moreover, about 62 vehicles were put on the operation to facilitate the field work.

7. TRAINING OF FIELD STAFF

At the outset all relevant materials, like equipment were procured and questionnaires and instruction manuals were prepared and printed. Then the training program for the fields staff was carried out in two stages. In the first stage, about 90 trainees, i.e. experts from the head office, branch statistical office heads and some of the field supervisors were given training for one week at the head office. Some of those trained in the first stage conducted similar training for about 140 field supervisors and about 651 enumerators for 10 days in all the 15 branch offices all over the country. During the training, the field staff were given detailed class room instruction on the objective and uses of the survey, concepts and definitions of terms used, methods of area measurement, method of crop cutting, interviewing procedures,... etc. The training sessions included thorough field practices with regard to data collection.

8. METHOD OF DATA COLLECTION

In each selected EAs a fresh list of households was prepared and then agricultural households were identified from the list of households. From these identified agricultural households, 25 agricultural households were selected using a systematic sampling techniques. Thus all agricultural holders belonging to the selected agricultural households were interviewed and the appropriate data were collected. The reference date for enumerating livestock, poultry and beehives was January 1st of 1996.

9. EDITING, CODING AND VERIFICATION

The editing and coding instruction manuals were prepared and printed. Then intensive training was given to the editors for three days. About 20 editors-coders were involved to accomplish the editing and coding tasks. In due course, two professional staffs were assigned to answer questions, clear doubts,...etc. so as to facilitate the editing and coding activity. In addition, the edited and coded questionnaires were checked by about 10 supervisors/verifiers. The verification was done on 100% basis.

10. DATA ENTRY, CLEANING AND PROCESSING

About 40 data encoders have participated in the data entry activity on shift basis(20 in the morning and 20 in the afternoon). Unlike the previous years, the data was entered in personal computers using I.M.P.S. (Integrated Microcomputer Processing System) software. Then, the data entered was checked and cleaned by four regular staff. Finally, the data processing activity was also done by personal computers(PCs) to produce results which were indicated in the tabulation plan and this operation was performed by four programmers.

It should be noticed that the sum of certain variables to group of zones may not be equal to regional or national totals because of rounding. Moreover "-" indicates no data was reported.

*****In the tables represent estimates that are not considered to be reliable due to small sample size or the item in that specified area is rare. Thus, such estimates are not reported in the result tables, however, their contribution is incorporated in the total estimates.**

11. Summary of Results

Part I

Number of Holders, Number of Livestock and Poultry and Average Number of Livestock and Poultry by Size of Cropped Area

From the data obtained in 1995/96 (1988 E.C.) Agricultural Sample Survey, efforts have been made to analyze and show the relationships between holder's cropland and number of holders reporting different types of livestock and poultry; number of livestock and poultry and average number of livestock and poultry per holder.

Size of cropland are classified into eight groups, i.e.

Group I	-	Without land
Group II	-	Under 0.10 hectare
Group III	-	0.10 - 0.50 hectare
Group IV	-	0.51 - 1.00 hectare
Group V	-	1.01 - 2.00 hectares
Group VI	-	2.01 - 5.00 hectares
Group VII	-	5.01 - 10.00 hectares
Group VIII	-	10.01 & above hectares

According to the results shown in Table 1, at national level, holders reporting Cattle are about 6.9 million followed by holders reporting Sheep and Goats 2.9 million and 2.3 million respectively. Out of the total holders which have reported Equine and Camels, holders reporting Asses are the highest i.e. 2.06 million.

As presented in Table 1, Figure A and B, most of the holders reporting livestock fall in group V, followed by group IV and group III. Thus, one can realize that most of the holders who reported to have livestock and poultry own cropland where the sizes range from 0.10 - 0.50, 0.51 - 1.00 and 1.01 - 2.00 hectares. In general, the higher the size of crop land, the higher the average number of livestock per holder is reported.

Table 1.1 shows that 6.9 million holders reported to have 31.76 million heads of cattle in which a holder owns on the average 4.58 heads of cattle at national level. The highest number of cattle per holder is reported for Afar region, 7.89 which is followed by Somalie region, 6.71. These two regions are located in the lowland areas of the country and the main occupation of the inhabitants is livestock production, dominantly cattle. Hence, average number of cattle per holder is reported to be significantly higher than other regions. As shown in Table 1.2, 2.9 million holders reported to have 12.8 million heads of sheep and average number of sheep per holder at national level is 4.36. The highest number of sheep per holder is reported in Somalie 8.19 followed by Tigray 6.83 and Amhara region 5.04. Table 1.3 shows that, about 2.3 million holders reported to have 9.96 million heads of goats where a holder owns on the average 4.39 heads of goats. At regional level, Afar, Dire Dawa and Tigray have reported the highest number of goats per holder.

As shown in Table 1.8, the average number of poultry per holder at national level is 6.56 where as in Gambela, Somalie and Tigray a holder owns 12.39, 8.15 and 7.46 poultry at regional level respectively.

Part II

Number of Holders and Number of Livestock and Poultry by size of Cropped land

In these set of tables (Table 2 - Table 2.8.11) the relationship between size of cropped area and number of livestock and poultry holdings are shown. As mentioned earlier, size of cropland area have been classified into eight groups where as number of Livestock and Poultry holdings were classified into six groups i.e.

- 1 - 2 heads for each livestock type and Poultry
- 3 - 4 "
- 5 - 9 "
- 10 - 19 "
- 20 - 49 "
- 50 and over "

According to the classifications, over 90 percent of holders that reported to own cattle, sheep and goats fall in the first, second and third categories which are 1-2, 3-4 and 5-9 numbers of each livestock type. There are indications that holders in some regions own more than 50 heads of cattle, sheep and poultry birds but the figures are found to be unreliable due to high coefficient of variation.

Tables that shows, number of holders reporting different numbers of livestock and poultry for each groups of crop land areas, at national, regional and group of zonal levels are presented from Tables 2.1 to 2.8.11.

Table 2 Number of Holders by size of cropped area and number of Livestock and Poultry, National, 1995/96 (1988 E.C.)

Part III

Number of Holders Reporting Livestock and Poultry by Age, Sex and Type and Beehives by Type for Different Size of Crop land Area

The relationship between the size of cropland area and the number of livestock and poultry by age group are shown in these group of tables except for poultry and mules which are categorized by sex and Beehives by type.

As mentioned in part I, size of cropland area have been classified into eight groups where as age group was classified into:

- Under 1 year,
between 1 and 2 years and
2 years and above for cattle, sheep and goats.
- Under 3 years and
3 years and above for horses and asses.
- Under 4 years
and 4 years and above for Camels

About 30 percent of livestock except camels, poultry and beehives are reported in the holdings size of group V, 1.01 - 2.00 hectare. Number of livestock and poultry by age and sex and number of beehives by type under different size of holdings are presented in Tables 3.1 to 3.9.11.
