List of Figures xiii
PART I. INTRODUCTION AND OBJECTIVES OF THE SURVEY
1. Introduction 1
2. Objective of the Survey 2
PART II. SURVEY METHODOLOGY, DATA COLLECTION AND PROCESSING
1. Scope, Coverage and Content of the Survey 3
2. Concepts and Definitions 5
3. Sample Design 8
4. Field Organization 9
5. Training of Field Staff 11
6. Method of Data Collection 11
7. Data Processing 12
a) Editing, Coding and Verification 12
b) Data Entry, Cleaning and Tabulation 12
PART III. SUMMARY OF THE SURVEY RESULTS.
1. Area Under Different Farm Management Practices 15
1.1 Total Fertilizer Applied Area 16
1.2 Total Pesticide Applied Area 16
1.3 Total Improved Seed Applied Area 17
1.4 Total Irrigated Area 17
2. Total Fertilizer Applied Area by Type of Fertilizer and Crop 81
2.1 Natural Fertilizer Applied Area 82
2.2 DAP Applied Area 82
2.3 UREA Applied Area 82
2.4 Area with a Combination of DAP and UREA Applied 82
2.5 Area with a Combination of Natural and Commercial Fertilizer Applied 83
3. Quantity of Commercial Fertilizer Applied by Type 147
3.1 Quantity of DAP Applied 147
3.2 Quantity of UREA Applied 148
3.3 Quantity of DAP and UREA Applied in Mix 148
3.4 Quantity of Commercial and Natural Fertilizers Applied in Mix 148

Page

4. Quantity of Local and Improved Seeds used by Type of Crop..... 213
5. Number of Holders Applying Agricultural Inputs on their fields by their Educational Attainment..... 247
Appendix I. Estimation Procedures and Formulations for Estimates of Totals and Variance.....309
Appendix II. Estimates of the Standard Errors with the Corresponding Coefficient of Variations 315

PART I

INTRODUCTION AND OBJECTIVES OF THE SURVEY

1. INTRODUCTION

Agriculture is the major contributor to the Ethiopian economy. A great majority of the Ethiopian population are engaged in agriculture to earn their livelihood and most of the nation's exports are made up of agricultural produce. The collection of reliable, comprehensive and timely data on agriculture is thus essential for policy formulation, decision making and other uses. In this regard the Central Statistical Authority (CSA) has exerted effort to provide users and policy makers with reliable and timely agricultural data.

This report presents survey results on agricultural practices such as use of improved seeds, irrigation, application of pesticides and fertilizers within the private peasant sector of the economy. The report consists of three parts where Part I includes the objectives of this annual survey, Part II includes coverage and content of the survey, sample design, field organization, training of field staff, method of data collection and Part III includes survey estimates of farm inputs applied areas as well as the quantities of inputs applied.

Estimation procedures and formulations for estimates of totals and variance for the agricultural practices and crop areas during the main (Meher) season are presented in Appendix I and estimates of the standard errors with the corresponding coefficients of variations (CVs) for farm inputs applied area and quantity of inputs applied are presented in Appendix II.

2. OBJECTIVES OF THE SURVEY

The general objective of CSA's Agricultural Sample Survey (AgSS) is to collect basic quantitative information on the country's agriculture that is considered essential for development planning, socio-economic policy formulation and other purposes. The AgSS is composed of four components: crop production forecast survey, Meher season survey , livestock survey , and Belg season crop production survey.

In particular, the objectives of the Meher season farm management practices survey are to estimate the total farm inputs applied area and quantity of inputs applied by type for major temporary and permanent crops. This report is based on the private peasant holdings in the sedentary rural areas of the country, further divided by regions and zones.

PART II

SURVEY METHODOLOGY, DATA COLLECTION AND PROCESSING

1. SCOPE, COVERAGE AND CONTENT OF THE SURVEY

The 1998/99 (1991 E.C) annual Agricultural Sample Survey used a sampling frame which was designed to cover the sedentary rural agricultural population in all regions of the country (urban and nomadic areas were not included in the survey). A break down of the sample distribution expressed by regions, zones and weredas is shown in Table A. A total of 56 zones and 417 weredas were actually covered by the survey.

The area sampling unit used for this survey is defined as an Enumeration Area (E.A) as identified for the 1994 Population and Housing Census. For the 1998/99 AgSS a total of 1450 E.As were selected from all regions of the country. Due to various reasons, 22 EAs were not covered in the survey which resulted in the survey actually covering 1428 E.As. From each of the selected E.As a representative sample of forty agricultural households were selected to estimate the various agricultural population items of interest of the sampled E.A.

Of these forty agricultural households, the first twenty-five were used for obtaining information on area under crops, Meher and Belg season

production of major crops, land use, agricultural practices, crop damage, and quantity of agricultural inputs used. It is important to note that of the total forty agricultural households sampled in each of the selected E.As, data on crop cutting were collected for only the fifteen households (11^{th} - 25^{th} households selected) for the area and production survey.

Table A Area Coverage of the 1998/99 Agricultural Sample Survey

REGION	NUMBER OF ZONES			NUMBER OF WEREDAS		
	TOTAL	COVERED	NOT COVERED	TOTAL[3]	COVERED	NOT COVERED
TIGRAY[1]	5	4	1	33	33	-
AFAR[2]	5	3	2	8	7	1
AMHARA[1]	11	10	1	93	93	-
OROMIYA	12	12	-	171	171	-
SOMALIE[2]	9	3	6	9	9	-
BENISHANGUL-GUMUZ	3	3	-	18	18	-
SNNP	14	14	-	73	73	-
GAMBELA	4	3	1	5	5	-
HARARI	1	1	-	1	1	-
ADDIS ABABA[1]	6	2	4	5	5	-
DIRE DAWA	1	1	-	1	1	-
TOTAL	71	56	15	417	416	1

Note

1= Zones that are not covered in these regions are urban.

2 = Zones that are not covered in these regions are the ones that are not inhabited by significant number of sedentary population.

3 = Numbers of total weredas signify those weredas in covered zones of the respective regions.

SNNP = Southern Nations, Nationalities and Peoples.

2. CONCEPTS AND DEFINITIONS

In order to collect standardized data of acceptable quality, the same concepts and definitions must be used by all field enumerators during data collection. Hence, some of the more important concepts and definitions used in the survey are given below.

Enumeration Area (E.A) an enumeration area in the rural parts of the country is a locality that is less than or equal to a farmer's association in geographical area and usually consists of 150-200 households.

Household : a household may be either;

a) a one person household, that is a person who makes provisions for his own living without combining with any other person to form part of a multi-person household or

b) a multi-person household, that is, a group of two or more persons who live together and make common provisions for food or other essentials of living . The persons in the group may pool their incomes and have a common budget to greater or lesser extent. They may be related or unrelated persons, or a combination of both. These persons are taken as members of the household.

Agricultural household : a household is considered an agricultural household when at least one member of the household is engaged in growing crops and/or breeding and raising livestock in private or in combination with others.

Holder: a holder is a person who exercises management control over the operations of the agricultural holding and makes the major decision regarding the utilization of the available resources. He has primary technical and economic responsibility for the holding. He may operate the holding directly as an owner or as a manager. Under conditions of traditional agricultural holding the holder may be regarded as the person, who with or without the help of others, operates land or raises livestock in his own right, i.e. the person who decides on what, when, where, and how to grow crops or raise livestock, and has the right to determine the utilization of the products.

Holding: a holding is all the land and/or livestock kept which is used wholly or partly for agricultural production and is operated as one legal entity by one person alone, or with others, without regard to management, organization, size or location.

Size of holding: in this report the size of holding is determined by total area under all different crops such as area under temporary crops and permanent crops.

Parcel : a parcel of holding is any piece of land entirely surrounded by land and/or water and/or road and/or forest, etc. which is not part of the holding. It may consist of one or more cadastral units, plots or fields adjacent to each other.

Field : a field is defined as any plot of land which is a parcel or part of a parcel under the same or mixed crops or any other form of private land holding.

Meher (main) Season crop ; any crop harvested from Meskerem (September) to Yekatit (February) is considered as a Meher season crop.

Belg season crop : any crop harvested during the months of Megabit (March) to Nehase (August).

Temporary crops : crops which are grown under a cycle of less than one year, sometimes only a few months with an objective to be sown or replanted again for additional production following the current harvest. Continuously grown crops planted in rotation are also considered temporary crops since each is harvested and destroyed by ploughing in preparation for each successive crop.

Permanent crop: crops which are grown and occupy land for a long period of time, not requiring replanting for several years after each harvest, are considered permanent crops. All fruit trees (i.e. oranges, mandarin, banana, etc.) and trees for beverages (i.e. coffee, tea, etc.) are considered permanent crops, but meadows and pastures are excluded.

3. SAMPLE DESIGN

The 1998/99 (1991 E.C.) meher season agricultural survey covered the rural part of the country except two zones in Afar region and six zones in Somalie region that are predominantly nomadic. A two-stage stratified sample design was used to select the sample EAs and the agricultural households. Each zone/special wereda in the sampled population of Tigray, Afar, Amhara, Oromiya, Somalie, Benishangul-Gumuz, SNNP regions was adopted as stratum for which major findings of the survey are reported. But each of the four regions, namely; Gambela, Harari, Addis Ababa and Dire Dawa were considered as reporting levels. The primary sampling units (PSUs) were enumeration areas (EAs) and agricultural households were the secondary sampling units.

The survey questionnaires were administered to all agricultural holders within the sample households. A fixed number of sample EAs was determined for each stratum/reporting level based on precision of major estimates and cost considerations. Within each stratum EAs were selected using probability proportional to size; size being total number of households in the EAs as obtained from the 1994 Population and Housing Census. From each sample EA, 25 agricultural households were systematically selected for the meher season survey from a fresh list of households prepared at the beginning of the fieldwork of the survey.

A total of 1,450 EAs (2.9 % of total EAs in the rural areas of the country) were selected for the survey. However, 22 EAs were not covered by the survey due to various reasons that were beyond the control of the Authority. Thus, the survey succeeded in covering 1428 (98.48 %) EAs. With respect to ultimate sampling units, it was planned to cover a total of 36,250 agricultural households for area measurement and the response rate was found to be 98.94 %. Estimation procedures of parameters of interest and their sampling errors are presented in appendix I.

4. FIELD ORGANIZATION

All the 22 Branch Statistical Offices of the CSA participated in the survey undertaking, especially in organizing the second stage training, in deploying the field staff to their respective sites of assignment, and retrieving completed questionnaires and submitting them to the head office for data processing. The Branch Statistical Offices were also responsible in administering the financial and logistics aspect of the survey within the areas of their assignment. In the data collection of the survey, a total of 1559 enumerators and 331 field supervisors were involved with an average supervisor-enumerator ratio of 1-to-5. To accomplish the data collection operation, all the enumerators were supplied with the necessary survey equipment (compasses, protractors, rulers, measuring tapes, balance scales, poles, ropes, sample bags, ... etc.) at the completion of the AgSS training. To assist the data collection activities in deployment, supervision and retrieval of completed questionnaires, a total of 123 four-wheel drive

The following table shows distribution of the field staff and vehicles by Branch Statistical Office.

Table B. Distribution of Field Staff and Vehicles by Branch Statistical Office

Branch Office	Number of		
	Enumerators	Supervisors	Vehicles
Mekele	103	22	7
Asayita	66	15	5
Gondar	75	16	6

Addis Ababa	28	6	4
Dire Dawa	33	6	3
Total	1559	331	123

5 TRAINING OF FIELD STAFF

The field staff training program was carried out in two stages. The first stage consisted of training of staff from the head office, Branch Statistical Office heads and the senior field supervisors. This training was given for a period of one week at CSA's headquarters in Addis Ababa. Many of these Personnel trained in the first stage were assigned to conduct similar training for field supervisors and enumerators for fifteen days in all the twenty-two CSA branch offices which are distributed all over the country. During the second stage of training, the field staff were given detailed classroom instruction on the objectives and uses of the AgSS, concepts and definition of terms used, the method of area measurement, method of crop cutting, correct interviewing procedures, ... etc. The training of the enumerators and supervisors also included field practice to reinforce the understanding of concepts, definitions and theories discussed in the classroom with regard to field measurement and crop cutting methods.

6. METHOD OF DATA COLLECTION

Data for the AgSS were recorded on questionnaires using both subjective and objective enumeration methods. Information on agricultural practices (application of fertilizers, pesticides, use of improved seeds and irrigation) were collected subjectively by interviewing the holders in each sampled household.

The objective measurement procedures for area measurement were carried out and data on farm inputs applied were collected for the first twenty-five selected households from each sampled E.A. in which all crop areas were physically measured using compass and measuring tape.

7. DATA PROCESSING

a) Editing, Coding and Verification

In order to ensure the quality of the collected survey data an editing, coding and verification instruction manual was prepared and printed. Then 50 editor-coders and 10 verifiers were trained for two days in the editing, coding and verification operation using the aforementioned manual as a reference and teaching aid.

The completed questionnaires were edited, coded and later verified on a 100% basis before the questionnaires were passed over to the data entry unit. The editing, coding and verification exercise of all questionnaires was completed in about 40 days.

b) Data entry, Cleaning and Tabulations

Before starting data entry professional staff of Agricultural Statistics Department prepared edit specifications for use on personal computers utilizing the Integrated Microcomputer Processing System (IMPS) software for data consistency checking purposes.

The data on the coded questionnaires were then entered into personal computers using IMPS software. The data were then checked and cleaned using the edit specifications prepared earlier for this purpose. The data entry operation involved about 50 data encoders and it took 35 days to complete the job. Finally, tabulation was done on personal computers to produce results as indicated in the tabulation plan.

PART III

SUMMARY OF SURVEY RESULTS

1. AREA UNDER DIFFERENT FARM MANAGEMENT PRACTICES

This part of the Agricultural Sample Survey report gives a picture of total crop area on which the private peasant holders applied agricultural inputs such as improved seeds, irrigation, pesticides and fertilizers in order to increase the volume and quality of crop production. The summary of results is presented below.

Fertilizer :- refers to anything that is added to the soil and intended to increase the amount of plant nutrients available for crop growth. In this survey two types of fertilizers (Natural and Commercial) are normally covered. The Natural Fertilizer consists of the farm yard manure and wood ashes while the Commercial types consist of DAP (Di-Ammonium Phosphate) and UREA (Ammonium Nitrate).

Pesticides :- are chemicals that are useful for the control, mitigation or elimination of pests which are detrimental to crops. Pesticides include insecticides and herbicides.

Area irrigated :- refers to the practice where an area of land is purposely and actually provided with water, other than by rain to improve the production of crops. The uncontrolled flooding of land by the overflow of rivers or streams is not considered to be irrigation.

Improved seeds :- are defined as a crop variety which give a significantly higher yield and better quality compared to locally produced varieties of seeds.

Summary Table A. Area Under Farm Management Practices 1998/99 (1991 E.C)

Practices	Area ('000 H.A)
Use of Fertilizer	3444.83
Use of Pesticides	384.90
Use of Improved Seeds	239.02
Use of Irrigation	63.17

1.1 Total Fertilizer Applied Area

Although fertilizer is one of the very important agricultural inputs used to increase production only 3.4 million hectares (38.6%) of the total cultivated crop area had fertilizer applied on it at national level. Out of this total fertilizer applied area 3.2 million hectares (92.3%) was reported to have been under temporary crops and the remaining 265 thousand hectares (7.7%) was under permanent crops. See Table 1.1

1.2 Total Pesticide Applied Area

As mentioned above the total cultivated crop area in 1998/99 (1991 E.C) Meher season was about 8.9 million hectares at country level. Out of this

pesticide was applied to only 4.3% of the total crop area. The total pesticide applied on temporary crop area was estimated at about 374 thousand hectares (97.1%) of the total pesticide applied area while the total pesticide applied on permanent crop area was 11 thousand hectares (2.9%). The largest pesticide applied crop area was reported to have been under teff (37.2%) followed by wheat (35.9%).

1.3 Total Improved Seed Applied Area

As illustrated in Table 1.1 the total cultivated crop area (temporary and permanent) was about 8.9 million hectares. Of this cultivated crop area, improved seeds were applied to 239 thousand hectares (2.7%). This indicates that the private peasant holders use mostly indigenous seeds which may be due to the cost and/or inadequate availability of improved seeds. Out of the total improved seed applied area, about 222 thousand hectares (92.8%) was under temporary crops and the remaining (7.2%) was under permanent crops. For details refer to Table 1.1.

1.4 Total Irrigated Area

Of the total cultivated area, the total irrigated area at national level was 63 thousand hectares (0.7%). Of the total irrigated crop area about 42 thousand hectares (66.2%) was under temporary crops while 21 thousand hectares (33.8%) was under permanent crops. Out of the total irrigated area under temporary crops 32.6% was covered by maize followed by sorghum 17.3%.

Similarly of the total irrigated area under permanent crops, 33.2% was covered by chat followed by fruits 20.7% (see Table 1.1).

Note

1.If in some tables figures do not add up to total it is due to rounding.

2.Those estimates designated by "**" in all tables could not be reported because of high coefficients of variations (i.e. they are less reliable). However they are incorporated in the total estimates.

3."-" in tables represents data not reported

2.TOTAL FERTILIZER APPLIED AREA BY TYPE OF FERTILIZER AND CROP

The three types of fertilizers most commonly used by the private peasants during the survey year were natural, DAP and UREA. These types of fertilizers were used separately or in combination with one another, i.e. only natural, DAP, or UREA, DAP mixed with UREA and Natural mixed with UREA or DAP.

As shown in Summary Table B below, among the types of fertilizers used DAP was applied in larger cultivated crop area. Natural fertilizers and Urea were also applied to a considerable amount of crop area. In contrast, the area on which a mixture of natural and commercial fertilizer was applied was estimated to be very small at national level.

Summary Table B. Total Fertilizer Applied Area by Type of Fertilizer

Fertilizer type	Applied Area ('000 H.A)
Natural	824.09
DAP	1147.59
UREA	148.78
DAP + UREA	1244.33
Natural + Commercial	80.09
Total	3444.83

2.1 Natural Fertilizer Applied Area

Out of the total fertilizer applied area which is 3.4 million hectares, natural fertilizer was applied to 824 thousand hectares (23.9%). Of this area, temporary and permanent crops accounted for about 577 thousand and 246 thousand hectares, respectively. See Table 2.1.

2.2 DAP Applied Area

The total DAP applied area was 1.1 million hectares, (33.3%) of the total fertilizer applied area at national level. Area under temporary and permanent crops accounted for 1.1 million and 5 thousand hectares of the total DAP applied area, respectively. Out of the total DAP applied area under temporary crops the largest was area under teff which accounted for 383 thousand hectares (33.4%). On the other hand, area under coffee was the largest DAP applied area (about 3 thousand hectares) of all DAP applied area under permanent crops.

2.3 UREA Applied Area

As presented in table 2.1 of the total fertilizer applied area, total UREA applied area was about 149 thousand hectares (4.3%). UREA applied to temporary and permanent crop areas accounted for about 144 thousand hectares (96.6%) and 5 thousand hectares (3.4%), respectively.

2.4 Area with a Combination of DAP and UREA Applied

Out of the total fertilizer applied area, the mixture of DAP and UREA was applied on an estimated area of 1.2 million hectares (36.1%). Temporary

and permanent crop areas where the mixture of DAP and UREA was applied accounted for 1.2 million hectares (99.7%) and about 4 thousand hectares (0.3%) of the total DAP+UREA applied area, respectively. Of all the mixture of DAP and UREA applied area under temporary crops, area under teff was the largest with about 572 thousand hectares (46.1%) while area under chat was the largest with about 2 thousand hectares (45.2%) among permanent crops.

2.5 Area with a Combination of Natural and Commercial Fertilizers Applied

Out of the total fertilizer applied area, the natural fertilizer mixed with the commercial fertilizer was applied on only 80 thousand hectares (2.3%). Temporary and permanent crop areas with a mixture of natural and commercial fertilizers accounted for 75 thousand hectares (93.8%) and about 5 thousand hectares (6.2%), respectively.

3.QUANTITY OF COMMERCIAL FERTILIZERS APPLIED BY TYPE

As indicated in Summary Table C, the total quantity of fertilizers applied by the private peasant holders at national level was 3.9 million quintals. It is important to note that the information on fertilizer quantity was collected and estimated for commercial fertilizers only.

Summary Table C: Quantity of Commercial Fertilizers Applied by Type

Fertilizer type	Quantity ('000 QT)	Percent
DAP	307.58	7.9
UREA	57.23	1.5
DAP + UREA	345.53	8.9
Natural + Commercial	3180.72	81.7
Total	3891.04	100.0

3.1 Quantity of DAP Applied

Out of the total quantity of fertilizer applied the quantity of DAP was 307 thousand quintals (7.9%). The total quantity of DAP applied on temporary and permanent crops was about 305 thousand and 3 thousand quintals, respectively. See the details in Table 3.1

3.2 Quantity of UREA Applied

Of the total quantity of commercial fertilizers applied, the quantity of UREA was 57 thousand quintals (1.5%) (Summary Table C).The total quantity of UREA applied on temporary and permanent crops was about 55 thousand and 2 thousand quintals, respectively.

3.3 Quantity of DAP and UREA Applied in Mix

Out of the total quantity of commercial fertilizers applied, the quantity of the mixture of DAP and UREA was 345 thousand quintals (8.9%). The quantity of the mixture of DAP and UREA applied to temporary and permanent crops was about 344 thousand and 2 thousand quintals, respectively.

3.4 Quantity of Commercial and Natural Fertilizers Applied in Mix

As observed from the survey result, application of a mixture of Commercial and Natural fertilizer is also practiced by private peasant holders. Unlike the previous year the quantity of Commercial and Natural Fertilizers applied in mix was large this year. It was estimated that about 3.2 million quintals of commercial fertilizer mixed with an unknown quantity of natural fertilizer was used.

4. QUANTITY OF LOCAL AND IMPROVED SEEDS USED BY TYPE OF CROP

The total quantity of local and improved seeds used by the private peasant holders during 1998/99 Meher agricultural year was estimated to be about 6.1 million quintals, of which 138 thousand quintals was improved seeds of major crops. This result indicates that of the total quantity of seeds used, only 2.3 % was improved seeds, while the remaining 97.7% was local seeds. Hence, the use of improved seeds by private peasant holders is negligible and the reason for this observation needs further investigation.

Summary Table D. Quantity of Local and Improved Seeds Applied

Seed type	Quantity ('000 QT)	Percent
Local seeds	5933.35	97.7
Improved seeds	138.05	2.3
Total	6071.4	100.0

5. NUMBER OF HOLDERS APPLYING AGRICULTURAL INPUTS BY THEIR EDUCATIONAL ATTAINMENT

The survey indicates that there were about 9.6 million holders at country level. Most of these holders (73.5%) were illiterate while 15.3% had attended higher education.

Of all holders, 2.0%, 1.3%, 2.4%, and 40.3% applied improved seeds, used irrigation, applied pesticides and fertilizer during the 1998/99 agricultural activities, respectively. Out of all holders who applied improved seeds, used irrigation, applied pesticides and fertilizers 57.2%, 67.1%, 66.8%, and 69.0% of them were illiterate in that order. For details, refer to Table 5.1

Summary Table E. Number of Holders Applying Agricultural Inputs

Practice type	Number of Holders Applying ('000)
Improved seeds	195.09
Irrigation	125.95
Pesticides	225.05
Fertilizer	3853.93

APPENDIX I

ESTIMATION PROCEDURES AND FORMULATIONS FOR ESTIMATES OF TOTALS AND VARIANCE

APPENDIX I

ESTIMATION PROCEDURES OF TOTAL AND SAMPLING ERRORS.

1. Estimating Area

The following formula are used to estimate total area of land under specific crop where a certain agricultural input was applied on in a given stratum.

$$\hat{A}_h = \sum_{i=1}^{n_h} w_{hi} a_{hi}$$

in which

$$W_{hi} = \frac{N_h M_{hi}}{n_h N_{hi} m_{hi}}$$

is the weight

where

- h represents the stratum.
- n_h is the total number of EAs selected in h^{th} stratum.
- N_h is the measure of size of the h^{th} stratum obtained from the sampling frame.
- N_{hi} is the measure of size of the i^{th} sample EA in the h^{th} stratum obtained from the sampling frame.
- M_{hi} is the total number of agricultural households of the i^{th} sample EA in the h^{th} stratum obtained from households listing of the survey.
- m_{hi} is the number of sampled agricultural households of the i^{th} sample EA in the h^{th} stratum
- a_{hi} is the sample total of area values in the i^{th} EA in the h^{th} stratum for the specific agricultural input for the specific crop.

$\hat{A}_h$ is estimate of total area under specific crop where a certain agricultural input was used in the h^{th} stratum.

2. To Estimate Quantity of Fertilizer

$$\hat{Q}_h = \sum_{i=1}^{n_h} w_{hi} q_{hi}$$

in which

$$W_{hi} = \frac{N_h M_{hi}}{n_h N_{hi} m_{hi}}$$

is the weight given above.

where

$\hat{Q}_h$ is estimate of total quantity of a specific fertilizer applied for a specific crop land in the h^{th} stratum.

q_{hi} is the sample total of quantity of a specific fertilizer applied for a specific crop land in the i^{th} EA in the h^{th} stratum.

3. Estimating Sampling Variance

Sampling variance of estimate of stratum total of area for a specific crop where a certain agricultural input used and quantity of a certain fertilizer are estimated by the following formulas respectively.

$$Var(\hat{A}_h) = \frac{n_h}{n_h - 1} [\sum_{i=1}^{n_h} \hat{A}_{hi}^2 - \frac{\hat{A}_h^2}{n_h}]$$

In estimating the sampling variance by the above formula, selection of EAs within a stratum is assumed to be with replacement. By so doing the variance estimate may be slightly over estimated but it greatly simplify the estimation procedure. Further more the finite population correction (fpc) is ignored in the formula. This is due to the fact that its effect is negligible.

4. Estimating Coefficient of Variation

Coefficient of Variation (CV) of estimate of stratum total area and quantity are given by:

$$CV(\hat{A}_h) = \frac{\sqrt{var(\hat{A}_h)}}{\hat{A}_h} x100\%$$

$$CV(\hat{Q}_h) = \frac{\sqrt{VAR(\hat{Q}_h)}}{\hat{Q}_h} X100\%$$

Regional or National Estimates of the total Characteristic and Sampling variance are obtained by aggregating the respective stratum totals.

APPENDIX II
